

About us

Beginning with Daesung Industrial Co. in 1974, Daeyang Corporation has developed and produced shade nets, and with a foundation of many years of accumulated experience in exporting to over 30 countries, we supply a variety of high-quality nets for agriculture, commercial and industrial use all over the world.

All our manufacturing facilities are ISO 9001 certified, ensuring world-class quality. With an annual production capacity of 7200 tons, we manufacture industrial high-density polyethylene(HDPE) fabrics, including shade nets for agriculture and horticulture, debris nets for construction, and high-strength light-shielding nets.

These products are formulated to control the harshest weather and environments in the world, and have unmatched UV stability. Our UV stabilization technology is world-class and guarantees high adhesion and product integrity.

We are continually committed to providing high-quality net solutions.

Light is one of the important factors for carrying out the photosynthetic process in plant growth, and the amount of light illuminated onto the plant depends on the angle and density of the leaves growing on it.

Through the product, you can control the amount of light illuminated onto crops as well as the degree of shading, which can contribute to an increase in production quantity.

It also controls the amount of UV exposure, preventing damage to crops caused by an over-exposure of sunlight and UV rays on plants.

Shade nets are designed to act as a physical barrier to UV radiation. The amount of light penetrated depends on the amount of UVR absorbed by the net. Therefore, shade nets must be carefully selected by specific industry, while taking factors that can affect performance, such as weave, color, tension, and UV stabilization, into consideration.

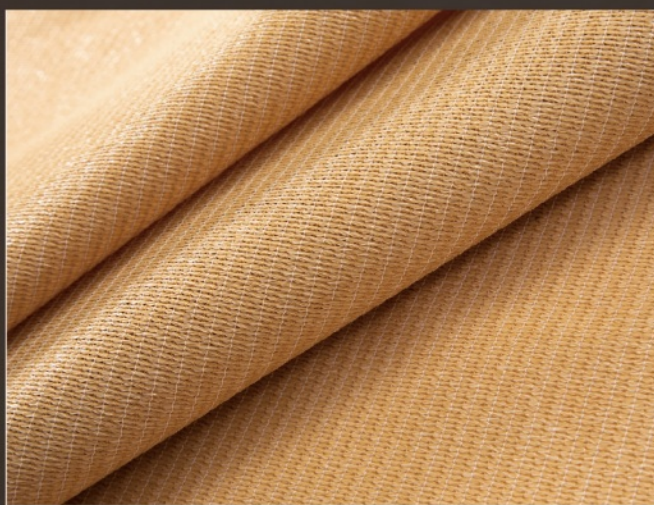

The development of Daeyang's sunshade production technology and sophisticated quality assurance system provide many advantages compared to existing products, including light weight, ease of handling, and durability, while guaranteeing a shading rate (25~95%) that meets your needs.

Our diverse product range and quality reflect our firm position and potential in the global market.

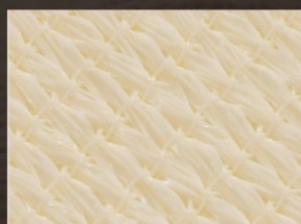

Experience our personalized service, where products and manufacturing systems are continuously innovated to meet your needs.

Desertsand

- Material : UV stabilized High Density Polyethylene
- Heat-setted
- Lock-stitch knitted
- UV block : up to 98%

- Weight : 240~340gsm/m²
- Any color available
- 10years UV-warranty
- Flame retardant available

Products

- Heavy Duty commercial shade cloth.

Application

- Public places, commercial facilities, parking lots, playgrounds etc. where shading is required.

Function

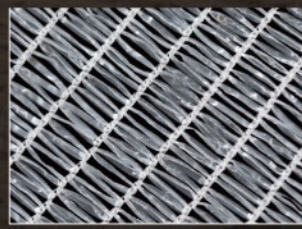

- Secure the health and safety of children, the elderly and people from strong UV rays and sunlight.
- Prevent heat damage to people and loads at the bottom of the product.
- Keep the temperature at the bottom of the product cool.

Bee Net

UL816

- Material : UV stabilized High Density Polyethylene
- Lock-stitch knitted
- Weight: 30~220gsm/m2

- Color : Any color available
- Reinforcement & Buttonholes available
- Flame retardant available

Products

- Anti-bird net, Anti-hail net, Anti-bee net, Anti-insect net, Wind-break net.

Application

- Farmlands, green houses, vine yards and orchards etc.

Function

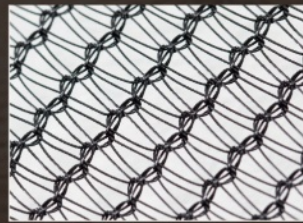

- Protect crops, manpower and facilities from damage caused by pests, birds, hail and wind.
- Control the required air volume, ventilation amount and light blocking amount depending on the type of crop.

UL505

- Material : UV stabilized High Density Polyethylene
- Weight: 80~306gsm/m2
- Any color available
- Reinforcement and buttonholes available

- Max width : up to 6mtr
- Shade & UV coverage : up to 95%
- Flame retardant available

Products

- Shade cloth, Privacy screen, Fence net

Application

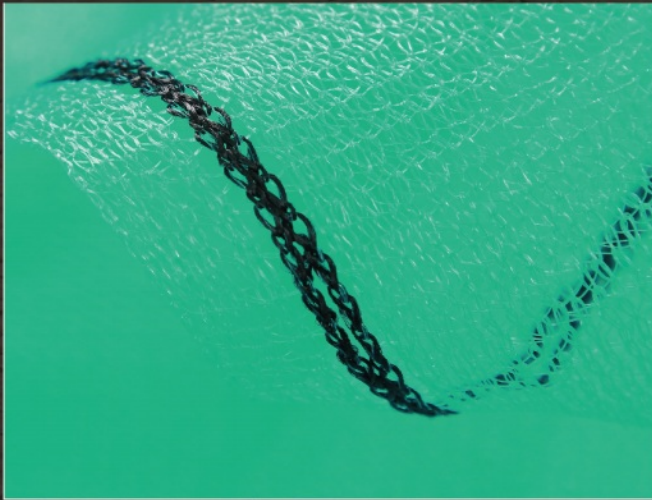

- Farmlands, green houses, public places and any place requiring shading, privacy protection and fence.

Function

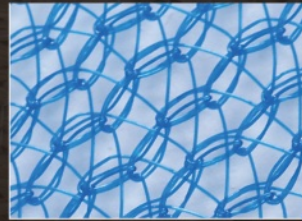

- Prevent damage to property and crops at the bottom of the product from strong UV ray and sunlight.
- Control the amount of light and UV exposure depending on the type of crop.
- Keep privacy.

UL310

- Material : UV stabilized High Density Polyethylene
- Weight: 50~130gsm/m2
- Any color available.

- Reinforcement and buttonholes available.
- Flame retardant available

Products

- Debris netting, Windreduction net, Fence net.

Application

- Construction and building sites.

Function

- Prevent industrial dust, falling and industrial safety accidents.
- Reduce air volume.
- Prevent damage to the loads from remnants of construction and building sites.
