COMPANY PROFILE

Hubei jinlong Group is located in Suizhou, Hubei, which is a famous historical and cultural city in China. The magnificent historical culture promotes the development of Jinlong Group. Founded in 1988, the group has been dedicated to making a piece of fabric professionally for more than 30 years. It is the earliest manufacturer of tarpaulin material in China, the designated manufacturer of China Railway Corporation and the strategic reserve enterprise of emergency industrial materials in China. It has become the leader in the industry of industrial fabric.

Hubei Jinlong Group covers an area of 400,000 square meters. The company has more than 1000 employees and an annual output value of over \$1 billion. With advanced production equipment and technology, it is the only enterprise of large-scale new high-end indoor and outdoor advertising consumables and industrial fabric materials in China that integrates textile calendaring, wide coating and coating production.

The company's domestic market share reaches more than 60%. Our high quality products are exported to Europe and America, Middle East, Southeast Asia, Africa, South America and other countries and regions. Due to the professional and reassuring one-stop procurement service, we have established long-term business cooperation with Amazon, DHL, the United Nations, many governments and other customers to achieve a win-win situation.

Brand story

In September 2023, the company grandly launched the "Tanyinglang" brand, focusing on the R&D, production and sales of simple inflatable tent series, tent hotel series, and space capsule series products, focusing on the outdoor camping category and one-click simple construction design. The concept covers multiple scenarios such as parent-child, family gatherings, company team building, advertising exhibitions, leisure and entertainment, camping bases, B&B and cultural tourism, etc., and is committed to providing a complete set of service solutions for outdoor enthusiasts around the world. We are currently actively exploring the new retail field and are sincerely recruiting global dealers to join hands in creating new retail. New mileage.

Wild luxury series quadrilateral structure

The actual object shall prevail, the renderings are for reference only.

The pointed curved structure design and aluminum alloy PVC assembly structure can be matched with more than 7 different colors of double-sided coated PVC synthetic fiber fabric to break the traditional tent shape and bring a luxurious, comfortable and tranquil outdoor travel experience to scenic spots and campsites. You can sit on the terrace, drink tea, chat and watch the scenery, and immerse yourself in the beautiful scenery in front of you.

Configuration list:

Platform structure	Steel-wood hybrid structure
Tarpaulin series	PVC knife coated synthetic fiber fabric weight 650-850g/m ²
Tarpaulin color	white / sand yellow / beige / black / silver gray / color can be customized
Wall system	double-layer hollow glass wall, aluminum alloy curtain wall, (can be equipped with internal blinds, sliding windows, sliding doors, screen windows)
Optional accessories	furniture / home appliances / lighting bathroom / SPC lock floor / linings / insulation cotton, curtains, single open glass door / double open glass door
Usage	Scenic tent camps, B&B tent camps, special wild luxury camps, garden landscapes, hot spring vacations, water park lounges, leisure tourism, specialty restaurants, etc.

Layout diagram

Mushroom House is a new self-developed patented product, with first- and second-generation products for customers to choose from. Create a stacked LOFT unit, with a kitchen on the first floor and bedrooms on the second floor to maximize space utilization, meet the needs of integrated life and leisure, and improve the quality of living.

Shell series

The shell tent combines the elegant form of architecture and bionics and is the best choice among various outdoor camps. It has an open platform to meet the viewing needs from different angles. The pointed shell corners can provide adequate shelter from rain and sun. The spacious platform attracts many children and can be turned into a parent-child amusement park. There are three room types available: mini, standard, and luxury.

Mongolian yurt series

The world-famous architectural form of the yurt is a major innovation of the Asian nomads. Today we are trying to combine this traditional building method with modern architecture. Although the yurt looks small in appearance, it has a large usable area with indoor air circulation and excellent lighting conditions. It is easy to build and relocate. It is suitable for animal husbandry production and nomadic life. Of course, you can also realize your feelings of the prairie anytime and anywhere.

Configuration list:

Characteristics of PVC Oxford fabric

Hubei Jinlong Company participated in military research projects, benchmarked against the US military tarpaulin requirements, and studied the current status of military tarpaulins in my country. During the military's research on tarpaulins, some performance shortcomings were discovered that urgently need improvement. Some results of related research can also be used to improve product performance in the civilian field. Jinlong Company quoted military technology, introduced cutting-edge technology to upgrade the functions of civilian products, and developed a targeted PVC Oxford fabric suitable for outdoor tents and canopies.

Comparing the excellent performance characteristics of PVC Oxford fabrics with traditional tent fabrics, they mainly include:

1. Strength difference: Traditional fabric types and fabric strength requirements have not kept up with the progress of the industrial chain. Traditional vinylon fabrics (canvas) and polyester civilian yarn fabrics (Oxford fabric) have the same square gram weight. There are common strength indicators such as tensile strength and tear strength, which are not as good as high-strength industrial polyester filament fabrics. PVC Oxford fabric is made of high-strength industrial polyester filament reinforced fabric, and composite materials matching different strength requirements can be designed according to the applicable area.

2. Outdoor weather resistance: Oxford fabric has insufficient light resistance, and the fiber molecular chains caused by ultraviolet rays are broken. Even if it has been treated with ultraviolet resistance, it is still unsatisfactory. The printing and dyeing process of Oxford fabric is a highly polluting industry strictly controlled by the state, and it is not environmentally friendly enough. , the color has insufficient light fastness, and will fade significantly after a short period of outdoor sunlight. The old appearance will appear in a short period of time, affecting the aesthetics. The color fastness of PVC Oxford fabric adopts additive process, which is different from printing and dyeing process. The color fastness is much better than traditional printing and dyeing fabrics, the entire production process is pollution-free, and it is

4. Wicking: With the traditional waterproof treatment of single-sided coating of fabric, the wicking phenomenon cannot be avoided, absorbing water and moisture, making it difficult to dry. The coating material on one side will become damaged, leakage, and light transmission after repeated use. The PVC Oxford fabric is treated with double-sided polymer materials to avoid wicking. It dries quickly after getting wet, has a longer service life, and is easier to store and store.

5. Creases and shading: The single-sided coating of traditional fabric (for example: silver coating, black coating) has a certain shading effect. After repeated use, creases or breaks, coating aging, coating peeling off, and loss of aesthetics. Practicality is greatly reduced. The unique process of PVC Oxford fabric has light-shielding properties, folding resistance, smoothness and excellent resilience.

6. Flame retardancy: The good flame retardancy of traditional fabrics is difficult to achieve satisfactorily and the safety is insufficient. The flame retardant properties of PVC Oxford fabric can extinguish fire immediately, greatly improving safety.

7. Anti-ultraviolet: Outdoor products must protect human skin from sunburn caused by ultraviolet rays. PVC Oxford fabric is designed with special anti-ultraviolet penetration capabilities, which is better than ordinary fabrics.

8. Special properties: The needle-shaped whisker nanomaterial added to PVC Oxford fabric is a special three-dimensional reinforcing material, and military technology is used in civilian products. Special modified rubber material ensures resilience, comfort, cold resistance and folding resistance.

9. Appearance: The specially designed surface texture breaks through the texture characteristics of traditional fabrics and can be designed with colorful surface textures, which is more fashionable and beautiful.

PVC Oxford fabric has now achieved excellent performance and application advantages, with ten physical indicators integrated into one. It is produced using military confidential formulas, advanced technology, and multiple sets of equipment to accurately match.

1. Super strong base force
2. Super weather resistance
3. Mildew resistance
4. High shading
5. High flame retardant
6. High cold resistance
7. Super anti-violet
8. Super waterproof
9. High strength and high elasticity technology
10. Special texture style, high resolution and recognition

Ultra-light weight of 310g/square meter, more convenient to carry, the world's widest fabric of 5 meters breaks the industry bottleneck, extending the production space to unlimited

In the next 3 to 5 years, there will be development space and applications. More technological elements will be embedded in fabrics. Heat insulation and noise reduction technologies will be implanted in fabrics to meet users' sleep and leisure requirements. The fabric structure will break through the aramid manufacturing process. Fully realize the safety performance of outdoor tents, greatly improving the fabric's anti-cut, anti-puncture and anti-theft properties to satisfy customers' safety psychology.

Development space in the next 5 to 10 years, further research on cutting-edge science and technology, extract high-performance lighting and luminous lighting raw materials from special rare ores and add them to coated fabrics. Plant extracts are implanted to realize the outdoor tent's own mosquito repellent and insect repellent functions. At the same time, we jointly develop remote control installation, storage, ventilation, air conditioning, and sonic positioning search and rescue functions with electronic technology companies, truly realizing that technology changes life and technology benefits the outdoors.
