TECHNICAL COATED FABRIC

TORO offers a **diverse range** of products for a **wide range of applications** in varied segments such as architecture , lifestyle , sports , advertising , defence , mines , food & agriculture , automobile , and transportation.

Our coated fabrics are
fire and weather-resistant
UV-stabilised
abrasion and tear-resistant.
Printable
Eco-Friendly (ACR)

Made of high-tenacity polyester yarn with a unique PVC formulation, these are waterproof and easy to fabricate, install and maintain.

Integrating all technologies under one roof

- **Textile Technology**
- **Rubber Technology**
- **Process Technology**
- **Coating Technology**

TORO technical coated fabrics are manufactured using our advanced manufacturing facility's latest production techniques developed through observation and acute implementation.

Our in-house fabric weaving facility and tremendous experience in the textile industry give us a competitive advantage.

Not only do we make our fabric that is specially designed, engineered and created with our innovative fabric constructions, but we also manufacture the necessary pigments and binders.

Greater control over our supply chain helps us offer a quality product at a digestible price, unlike other competitive manufacturers.

Our team is an amalgamation of experienced individuals, a tint of youth and a vision that stretches us to develop sustainable products. To provide our customers with the optimum solution, we work closely with global consultants and have a cumulative experience of over 75 years.

At TORO , we believe in multiplying every single opportunity we get , to make your coated fabric journey easier we have integrated a top notch fabrication unit which makes TORO a one-stop solution for your needs. ‘ This gives you the flexibility to innovate and discover each product from both a retailer and a buyer’s perspective , helping you to know exactly what you need.

Sustainability is implemented not adopted and here at TORO we invest in techniques and processes which leave a eco footprint , this is largely done by switching to eco friendly acrylic printable media from the conventional printable media .
