## ABOUT US

JANUS & JASON Co., Ltd was established in 1987 and has since developed into a reputable international supplier of sewing machine parts and OEM parts.

## PRODUCT

Currently, we provide Sewing machine parts and OEM products entrusted by domestic and foreign customers. For example: Bicycle handles, Oil seals, Screws, Powder metallurgy, Forging and Casting and other precision parts.

## SERVICE

JANUS & JASON Co., Ltd. has a comprehensive and complete product supply chain to meet your needs. We are confident in providing high quality sewing machine parts, as well as various OEM parts.

WE ARE PROFESSIONAL

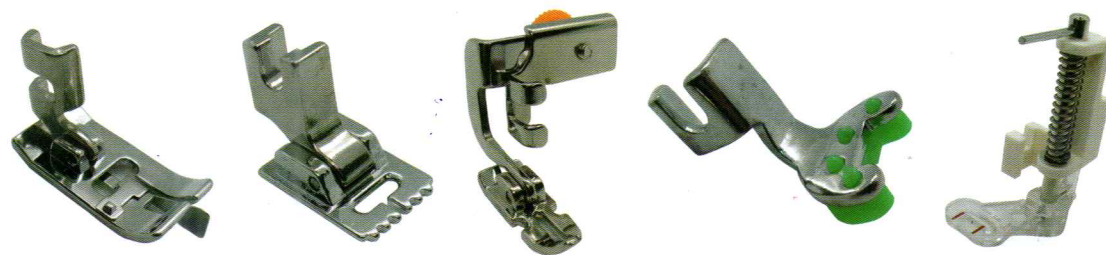

MANUFACTURERS AND EXPORTER

# CUSTOMIZED POWDER METALLURGY

客製化 粉末冶金

## ABOUT POWDER METALLURGY

### Material-saving 省料(節省材料)

When manufacturing parts with complex shapes using traditional machining methods, a lot of waste is produced, but when manufacturing parts using powder metallurgy methods, there is very little waste, which can save material costs.

### Time-saving 省工(節省製程時間)

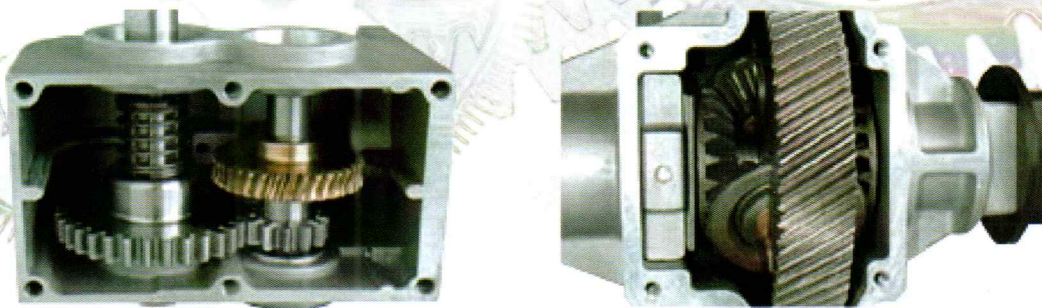

When using traditional processing methods to manufacture parts with complex shapes, more processing steps and time are required, and the costs and expenses are higher. However, when using powder metallurgy to manufacture parts with complex shapes, fewer processing steps are required. It takes less time and its cost and expenses are much reduced.

### Mass Production & Low-cost 適宜大量生產(低成本)

The mold is pressed into a compacted body by a powder forming machine. Its forming speed is much faster than cutting processing, so it is suitable for mass production.

### Precision 尺寸精度高, 尺寸重複性佳(精密尺寸)

The highest precision of mechanical parts formed and sintered by powder cold pressing can reach 0.0005 inches, and the surface is smooth. This quality is similar to the quality of moderately ground workpieces in traditional processing, and the required construction process is only pressurization and sintering, so it is Powder metallurgy is the cheapest processing method to produce parts. Parts manufactured by powder metallurgy are formed by molds, and the difference in dimensional changes between parts is very small, so the dimensional repeatability is good and the precision is high.
