PuraQ® Arome NA4

Natural flavoring for reduced-sodium meat products

Flavor management

PuraQ® Arome NA4 is a natural flavoring that offers many of the functionalities of salt, providing meat processors with multiple benefits in the production of sodium-reduced products. PuraQ Arome NA4 mimics meat flavor and helps manage water activity, the key to reducing the growth rate of microbial spoilage.

Sodium chloride (salt) is used in most processed meat products for a variety of reasons including enhancing flavor and providing microbial and textural stability. However, many consumers seek to reduce the levels of sodium in their diet, due to health risks.

Sodium reduction without losing microbial stability

PuraQ Arome NA4 allows meat processors to lower the sodium content of their meat products by up to 40% while retaining all of the benefits that salt has to offer.

Flavor management

As a natural flavoring, PuraQ Arome NA4 promotes savory attributes imparting meaty, brothy, spicy and salty notes. So there is zero compromise on a product's taste when sodium is replaced with PuraQ Arome NA4.

PuraQ Arome NA4 can be labeled as Natural Flavoring. As consumer demand for recognizeable ingredients increases, PuraQ Arome NA4 is your answer in the development of healthier products. PuraQ Arome NA4 is developed for cooked and fresh meat, poultry and seafood products such as:

- ► Ham
- ▶ Poultry breast
- Emulsified sausages
- ▶ Seafood
- Meat preparations
- ▶ RTE meat and meals

An addition level of 2.0% to 3.5% (w/w) is recommended, depending on the application. Other applications are possible; please contact your local Corbion office for further information.

Natural flavoring for reduced-sodium meat products

Sensory Research

Purpose: To assess the sensory impact of PuraQ Arome NA4 on meat products, trained panelists participated in blind taste-tests on frankfurters and chicken rolls. They rated the sensory attributes of two products, one containing 3% PuraQ Arome NA4, the other without.

Results: Frankfurters

Testers perceived an increased salt and flavor perception in the product with PuraQ Arome NA4, although the actual sodium content in both products was the same. Furthermore, the product with PuraQ Arome NA4 was perceived as having a firmer texture (Figure 1).

Results: Chicken rolls

While both products contained the same amount of sodium, PuraQ Arome NA4 was perceived as saltier compared to the control. A firmer texture was also noted in the chicken rolls containing PuraQ Arome NA4 (Figure 2).

About natural flavorings

Our natural flavorings are produced by the fermentation of sugars. This centuries-old process imparts multiple benefits to a finished food product, including enhanced flavor and improved texture. The addition of ferments to finished food products yields all of these benefits.

@CorbionFood

Corbion is the global market leader in lactic acid and its derivatives, and a leading supplier of emulsifiers, functional enzyme blends, minerals, vitamins, and algae ingredients. We use our unique expertise in fermentation and other processes to deliver sustainable solutions for the preservation of food and food production, health, and our planet. For over 100 years, we have been uncompromising in our commitment to safety, quality, innovation and performance. Drawing on our deep application and product knowledge, we work side-by-side with customers to make our cutting-edge technologies work for them. Our solutions help differentiate products in markets such as food, home & personal care, animal nutrition, pharmaceuticals, medical devices, and bioplastics. In 2020, Corbion generated annual sales of € 986.5 million and had a workforce of 2,267 FTE. Corbion is listed on Euronext Amsterdam. For more information: www.corbion.com
