

Machines from PSS make customers happy

## „No breakdowns have occurred in 6 years of operation of PSS SFV 720 filler“

*Meat processing machines from PSS SVIDNÍK, a.s., are reliable and powerful tools for your success.*

”In 2014, our company purchased a high-speed vacuum filler PSS SFV 720. After commissioning by PSS staff, the filler started to work, with which it copes with dignity, to this day.

The SFV 720 filler showed itself to be very easy to operate due to the large touch screen where you can set and monitor operating parameters from feed rate to product weight.

On the technical side, no breakdowns have occurred in 6 years, it is enough just to carry

out timely maintenance according to the technical documentation.

We would like to point out the efficiency of PSS employees, who can competently and quickly give information on a particular question.

From experience we can say that this model is a worthy competitor to other European manufacturers of fillers. We are grateful to PSS company for successful cooperation since 2014.,”
