**LOW-PROFILE LIFT TABLE:** Because they fold up to a small size, these tables can be installed directly on the floor without any need for embedding in a pit, and can be easily moved to another location.

## Advantages of a low-profile lift table

Low-profile lift tables improve working conditions and safety. The top platform can be E-shaped, U-shaped or flat.

- **E-shaped or U-shaped:** Used to lift loads or palletise goods. The E or U shape of these lift tables means that pallets can be loaded or unloaded using a pallet jack.

- **Flat:** Used to lift loads or palletise goods on a completely flat surface. An access ramp can be used if required to overcome the slight height difference between the floor and the lift table platform.
