MOQ

21 Kg

(5 gallon cube)

Also available

55 gallon drum

275 gallon tote

Usage Rate

1-2 grams/kilo

(application dependent)

Atomized natural hardwood smoke is used to replace traditional smoking. A regular smokehouse can be retro-fitted with an atomization system which creates a regenerated smoke cloud. More concentrated smokes are used in conjunction with compressed air and a small nozzle to produce a smoke cloud that emulates traditional smoking.

* If replacement parts are required, please contact our sales department.
