- V-shaped trap, 1100 mm wide at the top for animals with horns.
- Guillotine type entrance door, hydraulic cylinder operation.
- Door to the side for the ejection of the animal, functioning by hydraulic cylinder.
- Flapping floor, actuated by hydraulic cylinder.
- Pusher attached to the entrance guillotine door, with 2 movements actuated by hydraulic cylinders: first vertical movement down, to close the animal in the trap and second horizontal movement forward to push the animal forwards, to hold him back and take out his head for the bleeding hole.

- Guillotine type front door, with double movement down and up, to hold the animal's neck and adapt to different dimensions. Movement by hydraulic cylinders. Includes a blood collection tray.
- Grille with tilting backwards, to block the head on the frontal and separate the chin of the animal, to easily access for bleeding.
- Double hydraulic unit with 9 hydraulic cylinders for the movements of all moving parts; installed on a bench and placed in an adjoining room.
- Control box with buttons for each movement of the box.

Constructed of stainless steel AISI-304. Micro-blasted finish.

Performance :

- Ritual mode: 50-60 animals / hour (the performance can be reduced to half, depending on the time of loss of consciousness of the animal)
- Traditional mode: 60-80 animals / hour

Overall dimensions:

2000 mm length x 4000 mm width x 5500 mm height.
