BLASAU designs, manufactures and installs lines for sheep slaughtering, from aerial rails to machinery for slaughter and also the necessary tools in a line of this type.

In Blasau we offer lines for small productions with manual operation and automated lines for large productions with PLC management.

Our technical department designs each line, adapting it to the specific needs of each customer, according to the desired production and the type of sacrifice to be made (conventional, halal or kosher).

Blasau guarantees a team of specialized assemblers and a very flexible and immediate response after sales service.
