winweb-food - the ERP system for
meat industry, food industry and wholesale
» One solution for all processes «

Winweb
Food Software Specialists

Specialized ERP solutions for the food industry

Winweb Informationstechnologie GmbH has been developing industry-specific ERP software for the food industry, meat industry and wholesale for over 25 years. From purchasing to production to trade - all processes in the value chain are integrated in winweb-food. The system, which was developed entirely in-house, enables maximum flexibility without external specifications and offers everything from a single source - including auto reports, system-supported controlling (e.g. for shortage monitoring) as well as management cockpits and mobile app solutions for up-to-date reports directly on your cell phone.

Innovative teamwork with experience

Winweb combines 25 years of industry-specific expertise with new ideas. The software is not only tailored to the industry, but also individually to each company - industry-specific requirements are our standard. With flat hierarchies, agile development and continuous updates, we ensure investment protection and future viability. As a specialist for the food industry, we focus on depth rather than breadth: rather everything for one industry than a little for many.

Family-run with a clear vision

Winweb was founded in 1997 by Willi von Berg, who still manages the company today together with his son Arne von Berg and 60 competent employees. The family business stands for reliability and personal proximity - competent and human, as a partner for medium-sized companies at eye level. Development is completely in-house, which means that Winweb can react quickly even to unusual requirements. As a business IT specialist and head of development, Arne von Berg is leading the agile development of winweb-food into the future.
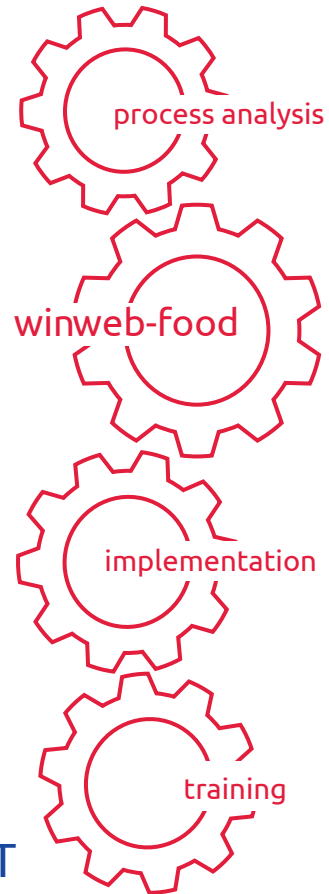

Customer proximity as a success factor

More than 250 companies trust Winweb - not just because of the software, but because of the cooperation. As a software partner at eye level, we design customer projects with a high level of expertise and an understanding of the reality of the business. Thanks to the modular structure, customer-specific adaptations can be implemented flexibly. winweb-food meets all legal and normative requirements as standard and always remains up to date thanks to automated upgrades - for maximum transparency, security and efficiency.

Flexible, modular, future-proof

The modular structure of winweb-food enables our customers to adapt the software precisely to their operational requirements - right from the start or as the project progresses. This keeps costs manageable and calculable. Our experienced consultants provide support in the selection of appropriate modules and also advise on financing options. Whether stationary or in the cloud - winweb-food adapts flexibly to your infrastructure and your business processes. And should your company develop further, the software can be expanded at any time - in line with the principle of growing with you instead of starting from scratch.

Modular System

Purchasing - With the purchasing programs in winweb-food, you can create a reliable basis for decision-making for optimal material procurement

Sales - The sales program ensures efficient sales organization from quotation to invoicing with optimal price maintenance, management of all information relevant to traceability and a flexible evaluation tool.

Store system / store accounting - The electronic connection of the store scales and tills to the store system in winweb-food and the automatic data exchange with your store scale network system ensures targeted store management.

Warehouse - All data from purchasing, cutting, production, packaging/labeling, scheduling, picking, sales and batch tracking flow together in this central, highly integrated module in order to keep all raw materials, consumables and supplies available on demand and on time.

Batch tracing/traceability - The recording and documentation of origin and processing data takes place along the process chain, and the data transfer to all important traceability platforms takes into account the different target formats.

Modular System

Electronic Data Interchange (EDI) - My fully automated EDI communication directly from winweb-food eliminates the need for complex EDI converters and interfaces to third-party providers.

Document Management System (DMS) - The archiving and management of your electronic and digitized documents is integrated in winweb-food.

Mobile data collection (MDC) / apps - In addition to wireless data collection, you can also use apps for specific tasks and directly record the actual status of internal processes and process the data immediately in the system.

Quality assurance - By storing all specifications from the operational QM system and the necessary inspections in accordance with IFS, all quality-relevant inspection specifications in the operational areas are directly available in the processes.

Slaughtering - The Slaughtering module enables you to reliably classify carcasses and easily invoice small and large livestock.

Cutting - The cutting module optimizes your cutting planning and optimally supports the control and billing of the cutting yield.

Production - winweb-food realizes a reliable and up-to-date calculation of material prices and material requirements for the planning, control and monitoring of recipes and their costs on a process-accurate recipe basis.

More about the modules at https://winweb.de/module/

„Even complex evaluations are created with just a few clicks and automatically executed and sent on request."

Henner Schönecke, Geflügelhof Schönecke GmbH

„Winweb has enabled us to optimize our processes and ordering procedures and thus greatly minimize sources of error."

Sebastian Winterhalter, Geschäftsführer Metzgerei Gustav Winterhalter GmbH

„The practical support from Winweb with conceptual tips from the experience of other projects serves us as a huge source of ideas on how we can optimize and simplify even more with Winweb - best practice in its purest form!"

Hannes Kurz, Thomas Kurz e.K.

„Until now, a physical inventory has been taken every month," explains Alber. As a result, he only has the financial transactions on his desk on the 10th of the following month. "Once the stock has been fully mapped in winweb-food and the bridge to financial accounting is in place at the end of the month, all you have to do is press the button to immediately see the profit and loss for the month just ended on the screen." Alber can already call up one of his most important key figures - kilos per man hour - on an ongoing basis: "This helps us to constantly optimize processes in order to become faster and more effective."

Felix Alber, CEO Radeberger Fleisch- und Wurstwaren Korch GmbH

„Winweb-food was the best investment we have ever made"

Matthias Müller, muellerundmueller GmbH

„The program is very self-explanatory. If you click on ‚Help', you actually get useful and understandable instructions". Jens Herrlich also pays tribute to the hotline for the useful tips: "They don't leave customers out in the cold. You get valuable help at short notice."

Jens Herrlich, EDV-Leiter Fleischerei Richter GmbH & Co. KG, Löbau
