

IN LINE QUALITY CONTROL AND GRADING SOLUTIONS

We Custom Build Your Solutions

Over the years, we have established a well known reputation for custom-build machinery. Each system is designed based on your product, your specification, your plant measurement and your food safety regulation. We will combine the needed technologies to achieve your inspection and grading needs.

OUR GRADING SYSTEM

Lizotte has developed the expertise to automate the grading process in various industries. Using state of the art technologies, can grade each product base on visual or physical attributes such as ; color, weight, size, species, lenght, and much more. Our grading system can also batch each product category into the desired count or weight for final packaging.

OUR SORTING SYSTEM

We develop inline sorting system that are designed to eject defective product from the production line. Our line of products combine x-ray and color inspection to detect various types of defects such as; married, overcooked, undercooked, missing batter, shape defect, weight discrepancies, foreign material, seam inspection and much more.

BUILT **CUSTOM**

Our team specialize in designing and manufacturing the finest custom food sorting and grading solution based on your needs. We continually challenge ourselves in all we do to drive continuous improvement.

QUALITY CONTROL AND GRADING SOLUTIONS

We design creative ejection mechanism that is not affected by the orientation of the product on your existing conveyor belt. Our solutions will remove defects from your production line without damaging any food items, even the most delicate ones. Each ejection system is custom designed based on any unique application including their respective product.
