Experience the convenience:

deep fry meat, fish, poultry and vegetarian products without regular oil changes

Produce for several days without changing oil

During industrial deep frying of your food products, do you also change your oil as often? Does your product take on a dark discolouration over time, or does it start burning when you are too late changing the oil? Are you regularly forced to deal with product recalls as a result?

If so, then HiTec has the golden solution for you: the ClearOil filter system.

Days of production without an oil change

Without product failure

Without burns

Users of the HiTec ClearOil filter system call it the ultimate gold strike. The innovative filter system quickly and efficiently removes all contaminants from your frying oil, such as breadcrumbs, flour, sugars and allergens. Using this ingenious filter system, your industrial fryer can now produce day after day without you having to change the oil. This also guarantees the final quality of your fried products. It is efficient and effective for you and the environment.

After the filter has collected the polluting substances, the dry compressed waste "cake" contains only 5% oil, which means you can dispose of it with the ordinary waste at no additional cost.

The stand-alone HiTec ClearOil filter system is designed in such a way as to enable you to connect it to any brand of fryer without an additional control system. The system features an intuitive touchscreen with recipes, making it easy to set up by the operator.
