

THERMAL DRYING SYSTEM

The drying system includes a reception hopper, exhaust fan, screw conveyors, cyclone, and absorption tower. The equipment layout is customized according to the client's plant design.

MAIN APPLICATIONS:

- Sludge drying;
- Fertilizers;
- Tanneries;
- Paper and pulp industry;
- Textile industries;
- Slaughterhouses;
- Biofuels;
- Blood, feather, and fish meal.

KEY ADVANTAGES

Low energy consumption;

High-quality final product, free of contamination;

Low gas emissions for treatment;

Low maintenance costs;

Compact, simple and safe design;

Flexible for various applications;

Low steam consumption;

Minimal wear on bearings and seals due to low shaft operating speeds.

Ideal for the production of
BIOFUELS
