# WHAT IS VIT4?

All your equipment controlled from one **single place**.

VIT4 is software designed to **store** and **manage** the data generated by Varpe equipment during production. It is an intuitive and friendly tool that distributes the information in a clear and schematic way. In addition, it adapts to the technical and analytical needs of the client and its frequent users.

REAL-TIME DATA

It shows real-time information on the status of the connected machines and the production in progress. It has graphics for quick visualization.
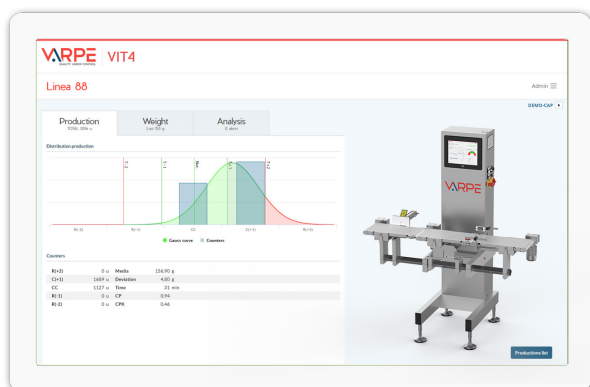

CONSOLIDATED PRODUCTION DATA

It stores the data that the Varpe machines have generated and displays them in an orderly manner, allowing subsequent analysis through the creation of reports.
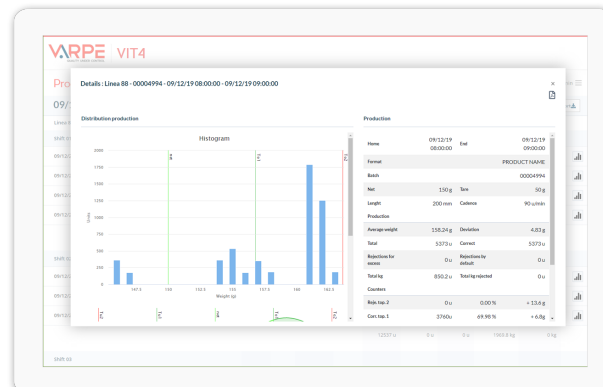

FUTURE FORECASTS

The system gives notices about future events, such as upcoming maintenance for a better organization of production.

VIT4 FUNCTIONALITIES

RANGE OF DATA

High availability of data: level counters, average weight, deviation, productivity and current format data, production graphs and histograms, etc.

REPORTING AND DATA EXPORT

Complete reports of closed productions: production data, rejects, levels, formats and visual graphics. Easy export of all data by .csv.
