VALUES TO OUR CUSTOMERS

Our Vertical Integrating Approach on
IL Textile Solution.
Simplifying your textile supply chain!

4

R&D INNOVATION

Functional Textiles Research Institute

- Functional fabric R&D cooperating with top textile colleges
- Product validation and quality control
- Technological training
- 68 patents have been authorized

Textile Testing and Quality Control

Continuous, strict tests using over 30 methods in our in-house testing laboratory

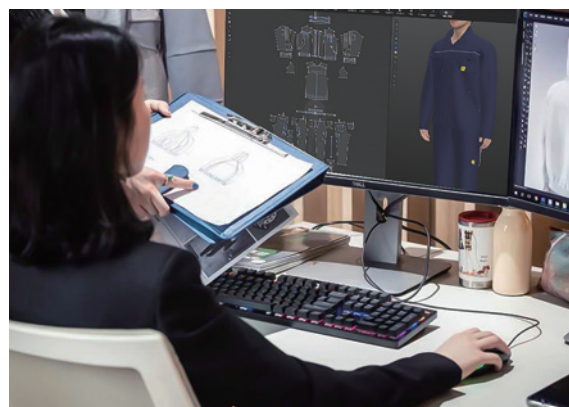

- Class 10,000 microbiology laboratory
- Chemical laboratory
- Physical laboratory

CUSTOMIZED DESIGN

Uniform Design

We have top domestic fashion designers who are winners of multiple industry awards and can accurately predict fashion trends. And we have mature customization experience from fabric selection, design.

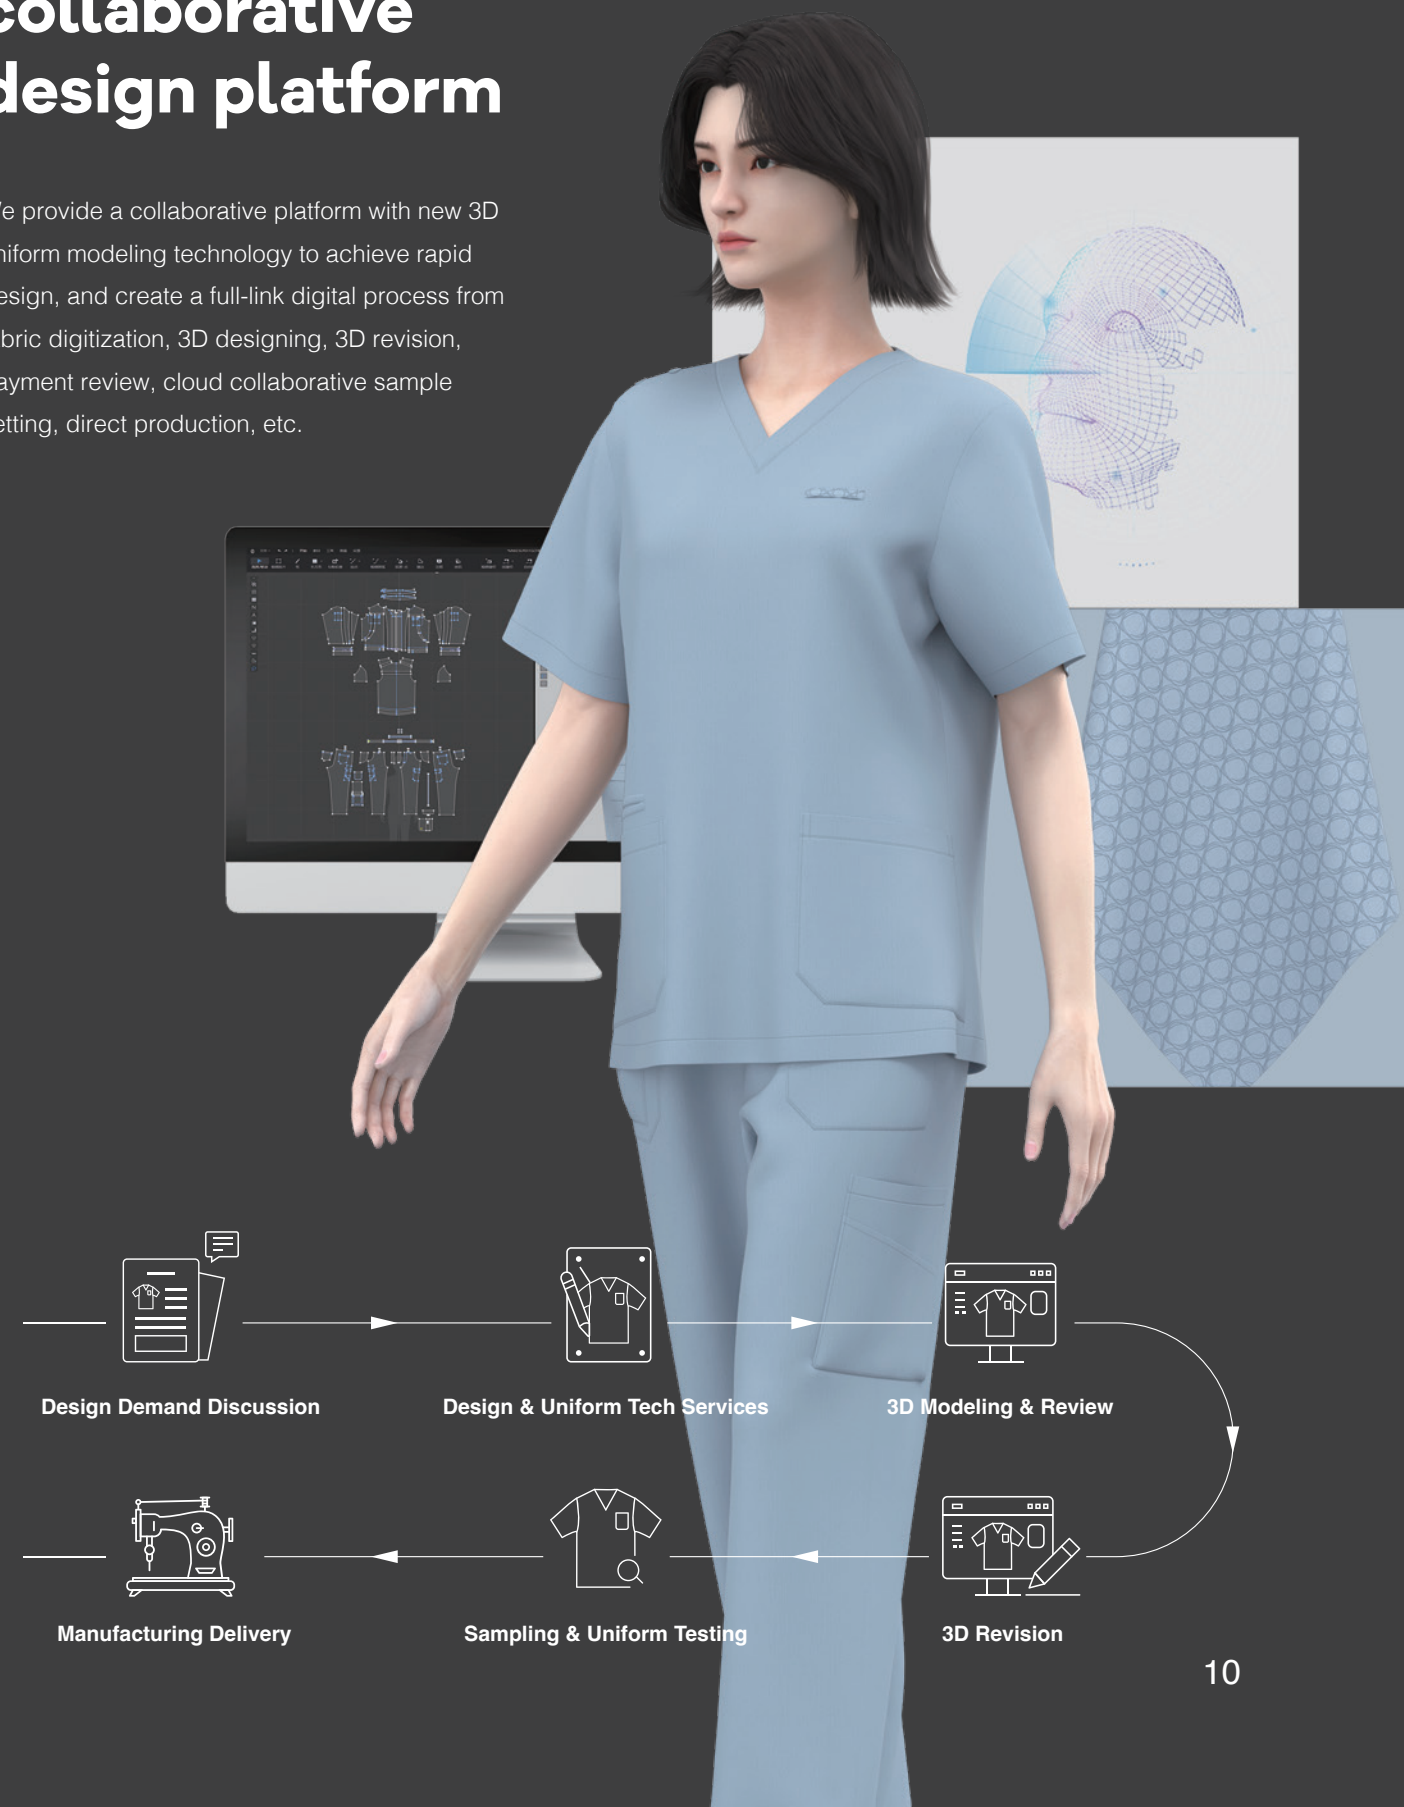

Uniform Tech

Our professional uniform technologies support our design team through every stage of product development, from design to manufacture. Our services include: design assistance, fabric selection, pattern development, prototyping, fit optimization, production guidance etc.

3D uniform collaborative design platform

We provide a collaborative platform with new 3D uniform modeling technology to achieve rapid design, and create a full-link digital process from fabric digitization, 3D designing, 3D revision, payment review, cloud collaborative sample setting, direct production, etc.

Cambodian Signature Textile Co.,Ltd

16 sewing production lines.

Benefiting from tariff advantages, sufficient labor, and supportive facilities, we're able to give customers cost-effective products with faster delivery times.

- 8 wholly owned facilities + 16 partner factories
- Standardized end-of-line quality control systems
- Quality systems such as WRAP, SMETA, ISO9001, ISO14001, ISO45001 etc.
- Class-2 medical textile manufacturing certification
- Testing in own lab and self-operated laundry
- VAS capabilities, including embroidery, heat transfer printing, screen printing, fabric lamination etc.

TEXCLOUD

RFID & AI BASED INTELLIGENT TEXTILE

We have built a digitization R&D center to offer the TexCloud service, our digitization SaaS solutions, for the whole chain of public textiles to serve global customers.

TexCloud provides the laundry industry a software & hardware integration solution, combined with IoT and AI abilities, especially the UHF- RFID technology.

For the uniform industry, we also have been setting up a solution, based on 3D & VR technologies, as well as AI, to achieve the goal of flexible production, which can help uniform manufacturers respond to changes quickly, reduce costs, and improve quality and efficiency.

SUSTAINABILITY STORY

Sustainable product design, extending the lifespan

We are committed to developing textiles that are resistant to industrial laundry, improving the service life of linens and uniforms, thereby reducing energy consumption and waste generation to reduce the impact on the environment.

Eco-friendly manufacturing process

We use technologies such as solution dyeing, recycled polyester and biodegradable fiber to practice energy conservation and carbon reduction from production of raw materials.

We adopt 3D digital sample garments and flexible production line, from garment proofing to intelligent cutting to heat recovery and finishing process, to avoid overproduction and energy waste and achieve sustainable production.

Our service, practice circular economy

In the prevalent age of rampant consumerism, solely solving waste at the raw material and production is far from sufficient. Our introduced linen and uniform circular service, the integrated solution involving leasing, cleaning, maintenance, and recycling, which replacing a single-line mode of disposable purchasing and discarding. And this solution has significantly enhanced the utilization rate of textiles.

Scientific washing and maintenance can increase lifespan of textiles. Meanwhile, heat recovery device and sewage treatment facility are equipped to realize 70% recycling of washing water.

RFID based intelligent system solutions

We are consistently implementing RFID technology to trace and manage the entire lifespan of textiles. In 2022, we established an independent brand—TexCloud, focusing on digital solutions across the entire supply chain of public textiles. Through our efforts, we've effectively assisted numerous clients in optimizing textile inventory and turnover, enhancing operational efficiency, ensuring maximal utilization of textiles, and reducing waste and environmental impact.

As a public textile industry group with decades of experience in the field of "Sustainability". Merrytex® is committed to solving textile pollution and waste problems, providing partners and consumers with outstanding sustainable solutions.
