

2024

IoT Lighting Solutions

Your IoT lighting partner

Cost Effective IoT Lighting Solutions

Significant energy savings and short payback period, all-in-one control and monitoring, visual health enhancement, analysis and ESG reporting.

Liricco has over 12 years of experience in the development and implementation of green IoT technology. Since 2016, Valta Pro IoT lighting solutions have been implemented in large scale commercial and industrial sites helping its clients to maximize energy savings and to enhance service level and user experience.

Liricco is committed to designing and producing high efficacy and top quality IoT lighting products. These products have been selected by lighting professionals and building owners for projects requiring green building (BREEAM, LEED, BEAM) and WELL certifications.

Liricco is continuously refining and expanding our services which include lighting design, engineering and technical support, consultation, and ODM manufacturing and is well-equipped to assist its clients to implement IoT projects.

Liricco is your competitive and flexible IoT lighting solution partner.

BREEAM®

BEAM

Beyond IoT lighting

An all-in-one product ecosystem including lights, sensors, switches, curtains, blinds, thermostatic radiator valves, A/C controllers, power meters and much more ...

Valta IoT system is a reliable end-to-end intelligent system for commercial and industrial applications. It consists of web and APP interface, server (cloud based or cloudless), hubs and connected devices (wired or wireless).

Benefits

Easy to install and use

Intuitive system design allows user to easily set up, control and monitor connected devices in one single platform.

Streamline maintenance work

Monitor work progress by creating work orders online for the facility management team or maintenance partners to access.

Simplify daily work routine

Scene settings enable optimization of lighting environment to maximize energy savings and to improve indoor environment.

Product compatibility

Compatible with various protocols including DALI, Casambi, Bluetooth Mesh, Zigbee, WiFi, enabling seamless integration.

Stable and scalable

Local control features ensure system stability and cloud deployment enables scalable data storage and advanced control functions.

Versatility

From lighting control to energy management, Valta all-in-one solution is designed to meet different application requirements.

Applications

Valta integrated IoT solution for DALI and wireless protocols (Bluetooth Mesh, Zigbee and WiFi).

Casambi IoT solution with Valta Pro lighting products.

In order to curtail climate change, it is imperative for organizations to reduce carbon emissions in buildings. Apart from saving energy in lighting, it is important to pay attention to the quality of the light source and occupants' visual health. Valta Pro 2024 lighting products focus on addressing these challenges.

- **Reduce carbon emissions** High efficacy and adaptive illumination to maximize energy savings. Our lighting products use only high efficacy LED chips and power supplies. Different levels of control sophistication (manually adjustable power output or IoT system control) can be selected to achieve the desired level of illumination and to maximize energy savings.
- **Well-being** High quality illumination to improve occupants' visual health. Most of our commercial lighting products offer low UGR level and high CRI level to provide better visual comfort and enhance productivity level.
- **Sustainability** Sustainable product design to reduce waste. Most of our lighting products offer color temperature and power adjustable features, helping our clients to reduce the product SKU and to simplify the maintenance work. At the same time, this helps to reduce waste in production.

LED Strips

NEW SS2 Valta connected smooth extrusion dimmable IP67 LED strip

- Silicon extrusion with IP67 protection provides excellent luminous uniformity.
- Clip on design with soft silicon material offers flexibility and easy installation.
- External LED driver and works with external sensor for motion and daylight dimming.
- Works with Casambi, Valta and DALI lighting control system.

SS1 Valta connected high efficacy LED strip

- High efficacy up to 195lm/W.
- Available in IP20, IP65 with silicon sleeve protection, and IP65 in silicon extrusion form.
- Electrostatic discharge (HBM) up to 2000V.
- External LED driver and can link up LED strips up to a total power of 300W.
- Works with Casambi, Valta and DALI lighting control system.

Linear Lights

The image shows a large, curved wall display in a modern interior space. The display is composed of several panels, some of which are illuminated by linear lights. The panels show various images: a person running, a person in a blue and red outfit, and a person in a white tank top. The floor is a speckled grey material. The ceiling is dark with linear lights. The overall atmosphere is modern and athletic.

LL1

Valta connected linkable IP40 LED linear light

- High efficacy up to 125lm/W.
- Adjustable power and CCT (3000K-4000K-5000K).
- 5 different aluminum finishing colors to choose from.
- Housing made of high quality aluminum alloy for better heat dissipation to prolong the product life.
- Works with Casambi, Valta and DALI lighting control system.

TP3

Valta connected linkable IP65 LED triproof

- High efficacy up to 150lm/W with optional motion and lux sensor.
- Adjustable CCT (4000K, 5000K, 6000K).
- Modular design and can link up TP3 lights up to a total power of 800W.
- Diffuser made of extruded polycarbonate with IP65 and IK08 protection.
- Works with Casambi, Valta and DALI lighting control system.
- * Emergency battery version available.

Lithium Iron Phosphate Battery

Advantage of Lithium Iron Phosphate (LiFeP04) Battery

The Lithium Iron Phosphate (LiFeP04) battery is the latest and safest battery currently available on the market. It offers many benefits compared to Ni-MH and other types of Lithium batteries.

Benefits:

Efficient performance - The self-discharge rate of the Lithium Iron Phosphate (LiFeP04) battery is very low at about 3-4% which means less frequent recharges. The charge efficiency of the LiFeP04 battery is about 95% and therefore charges quickly and efficiently. This is significant because in normal use the battery in an emergency light fitting is being continually trickle-charged to keep it at near 100% capacity. Ni-MH can lose 15% in the first 24 hours, falling to 10-20% per month (depending on temperature) after that. The charge efficiency of Ni-MH battery is very high in the earlier stages of charging. Once the battery reaches 70% capacity heat starts to be generated and the charging efficiency falls to 85%. The result of this is that the charger in an emergency fitting with Ni-MH batteries is working almost continually, whereas the charger in an LiFeP04 circuit is working at low current in short and infrequent bursts.

Reliability - LiFeP04 batteries can operate in extreme temperatures without breakdown during charging or discharging. LiFeP04 batteries have a cycle durability of approximately 2000 times and require little to no maintenance once installed. Their performance remains almost constant till they reach end of life, usually defined as 70% of rated capacity. Typically, an LiFeP04 battery will have a life of 8-10 years. The performance (power storage) of Ni-MH declines rapidly with every charge/discharge cycle, so it typically needs to be changed after 3 or 4 years.

Safety - LiFeP04 batteries are thermally and structurally stable (when compared with other types of lithium batteries) during overcharge or short circuit conditions, or if handled incorrectly.

| Type | Ni-CD | Ni-MH | LiFeP04 |
|---------------------|---------------|---------------|--------------|
| Life Cycle | 800 times | 500 times | 2,000 times |
| Toxicity | Yes | Yes | No |
| Self Discharge Rate | 10% per month | 20% per month | 4% per month |
| Duration Time | 3 hours | 3 hours | 3 hours |
| Brightness Output | 30% - 100% | 30% - 100% | 100% |
