- **CONNECTORS**
straight or angled, two or three-pole connectors with ENEC approval
- **END TERMINALS & CUSTOM**
We can apply terminals and customize the product according with Your needs

We connect the world

We produce PVC, rubber and halogen-free power cords, for the main European countries, for the United Kingdom and also with cULus approval for the American and Canadian markets (in addition to the line of IEC connectors and the most particular plugs, such as the Australian, Argentinean and Israeli plug). We have also set up a department entirely dedicated to the production of extendable spiral cables, both HAR branded and special ones according to the customer's design: in both cases we guarantee a very high level of quality and customization

The new production site of 20,000 m² of surface area, made up of two factories connected via a covered structure, synergistically accommodates the production of harmonized cables, the packaging systems, the cutting and molding departments for plugs and the shipping warehouse.
