MyCellHub

Environmental sampling.
Detect faster.
Prevent better.

There are countless benefits of digitalizing environmental sampling processes: save time with automation, simplify regulatory compliance and reduce errors.

One year after implementing MyCellHub's environmental sampling module, one of our clients ran an internal audit. This is what we found. For a 2-operator team operating in a single cleanroom, they achieved:

-65%	**-78%**	**-1,722**	**+71%**	**€151K**
error reduction	documentation time	working hours	productivity increase	yearly savings

How?

Detect better, earlier, faster
Detect contaminations faster and facilitate compliance with automatic out-of-specification alerts, advanced review-by-exception tools, built-in traceability and data integrity checks.

Optimize your operations
Advanced master sampling-plan function with workflows automatically scheduled and assigned to your team, automatic checks, remote access to readouts from QC tests... Just the tip of the iceberg.

Trending analysis made easy
Generate clear-cut reports in a click, whenever and however you need them, use custom reporting templates, create thorough trend reports for as many rooms as you need - or even for a specific batch.

" I can now generate environmental-monitoring trending analysis and reports in a simple click. What a game-changer! "
Future you, as a MyCellHub user
