MES-IP-SERVER

The MES-IP-SERVER from Messung Ourican is a cutting-edge solution designed to provide seamless integration between your KNX ecosystem and the Ourican View app. It offers users complete control over their smart automation systems via phone or tablet, ensuring an intuitive and streamlined experience.
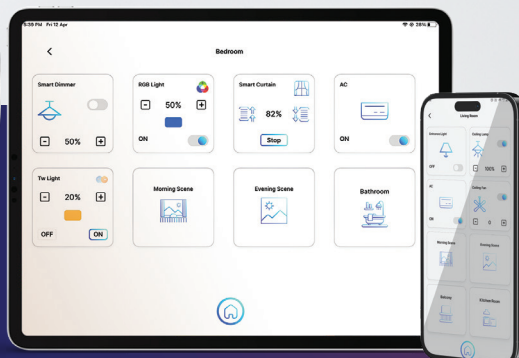

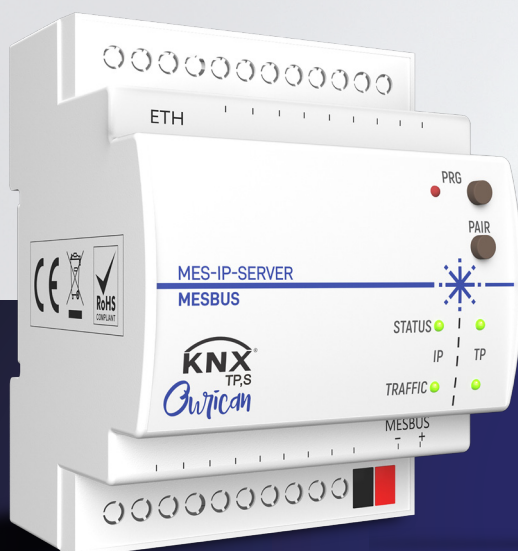

With support for up to 120 controls across 15 customizable pages, the MES-IP-SERVER offers comprehensive management of various devices and functions within your smart home or office. The server's interface is specifically configured through ETS, making it easy to set up and manage controls according to individual preferences. To enhance user experience, it comes with in-built icons that visually represent different functionalities, ensuring clarity and ease of use.

Cloud connectivity allows for remote access, meaning users can manage their automation systems from anywhere. Additionally, the MES-IP-SERVER features flexible IP configuration through ETS or DHCP, ensuring that network integration is both simple and adaptable.

For added convenience, it is equipped with two status LEDs that provide real-time system feedback.

Compact in design, the MES-IP-SERVER fits into 4 DIN units (71.3 mm x 90.5 mm x 62 mm), making it suitable for tight spaces while delivering powerful performance. The integration of Ethernet 10BaseT with an RJ45 socket ensures reliable and fast communication between the device and the network.

In conclusion, the MES-IP-SERVER is a highly efficient and essential component for anyone looking to fully control their KNX ecosystem through a modern and user-friendly interface. It brings the power of automation directly to your fingertips, offering convenience and flexibility at every turn.
