Weinzierl Engineering GmbH

The company from Germany develops and produces high-quality solutions for building control and smart homes.

Communication in the building is based on KNX. This is a global standard that can be understood as a language spoken by the individual components in the smart home. Typical applications are lighting control, shutter control or heating control.

Weinzierl has been developing hardware and software for over 20 years and distributes these products worldwide.

Weinzierl develops intelligent software and hardware components for building system technology.

The focus is on building networking based on the **KNX standard**.

Because of this focus, with Weinzierl products and solutions Weinzierl covers the KNX system comprehensively.

In addition, Weinzierl offer gateways, as well as software solutions for other standards such as **EnOcean, Modbus or DMX.**
