**HT Line  
CERAMIC**

## **INDASA Launches the Rhynogrip HT Line Ceramic: A New Standard in Abrasive Technology**

At INDASA, there is a constant looking to innovate and develop products that meet the evolving needs of professionals. Today INDASA is pleased to present the latest addition to its range of cutting-edge abrasive solutions: HT Line Ceramic. Specifically designed to optimise productivity and performance, this new line of abrasives is set to create a big impact by elevating productivity standards.

Rhynogrip HT Line Ceramic is the result of INDASA's expertise in abrasive manufacturing, by incorporating advanced materials technology at every stage of development. From the durable paper backing to the premium resins and high performance ceramic mineral grains, every component has been carefully selected to ensure maximum efficiency and longevity.

What really sets HT Line Ceramic apart is the self-sharpening grit technology. This innovative feature allows the abrasive grain to continuously sharpen itself during use, maintaining its cutting power for longer periods of time. As a result, professionals can expect longer abrasive life, reduced downtime for abrasive changes and improved overall productivity.

In demanding working environments, dust removal is a critical factor in ensuring both a clean workspace and the longevity of the abrasive. That's why we have incorporated ULTRAVENT extraction technology into the HT Line Ceramic. This technology optimises dust removal during sanding, reducing clogging and improving abrasive life.

With ULTRAVENT, professionals benefit from a smoother operation, improved surface finish and less abrasive material. The result is a cleaner, more efficient workflow that increases overall productivity.

## Why HT Line Ceramic?

- **Innovative Ceramic Grit:** Self-sharpening technology for extended use without sacrificing cutting power.
- **Premium Quality Materials:** Manufactured using the highest quality raw materials to ensure long-lasting durability.
- **ULTRAVENT Technology:** Optimised dust extraction for a cleaner work environment and enhanced abrasive life.
- **Improved Productivity:** Fewer abrasive changes and less downtime mean more time spent on the job.

At INDASA, there is a commitment to quality and innovation that drives INDASA to create solutions that make a real difference for professionals. With the Rhynogrip HT Line Ceramic, INDASA is proud to offer an abrasive product that not only meets but exceeds industry standards.
