

Premium Batteries

Discover a World of New Energy

Innovative batteries with liquid electrolyte

SELECTION | SELECTION EVO

ABSEL SELECTION and ABSEL SELECTION EVO batteries utilizing advanced SLI technology are specially designed for passenger cars and light commercial vehicles of all classes.

Due to advanced calcium (Ca) alloy grid technology, they provide instant engine start and reliable power supply at all times, delivering up to 25% higher performance compared to conventional batteries.

Absorbent glass mat technology (AGM)

PLATINUM AGM

ABSEL PLATINUM AGM batteries are specially designed to handle the frequent cycling and increased energy requirements typical of Start-Stop and regenerative braking systems. Performance surpasses conventional batteries by up to 40%.

25% HIGHER PERFORMANCE
Performance surpasses conventional batteries by 25%

High performance over a wide temperature range

SEALED MAINTENANCE FREE
Safe maintenance-free design

Higher vibration resistance

SPECIAL FORMULATED GRID TECH
Advanced calcium (Ca) alloy grid technology

START STOP
Accelerated charge acceptance

300% cycle life
300% longer recharge cycle life

40% HIGHER PERFORMANCE
Up to 40% better performance compared to conventional batteries.

High performance over a wide temperature range

VRLA SEALED
Safe, maintenance-free design with pressure regulating system.

Higher vibration resistance

SPECIAL FORMULATED GRID TECH
Advanced calcium (Ca) alloy grid technology.
