

PEB 721 -

These tyres are designed for port application such as reach stackers and empty container handlers. Load carrying & stability is an important factor while selecting tyres for this application. The PEB 721 has high rubber distribution offering more traction, stability and improved load carrying capacity. The tyre has Quick heat dissipation and cooler running on hard concrete surfaces due to the optimised tread design. With unique tread compound, PEB 721 has improved wear results in longer tyre life, better mileage, and resistance to cuts and snags. The strong casing/carcass ensures maximum operating efficiency and exceptional stability in lift mode, required in heavy duty applications.
