**WWW.SICH.UA**

**IT CONTROLS BLEEDING FOR 100%**

# AN ORDER TO SURVIVE

**Tested in combat conditions**

**Works wet, blooded, dirty,  
snow-bound, in sub-zero spell and heat**

**Withstands extreme loads**

**One-handed application**

**Fast, up to 10 seconds**

**Doesn't reflect light**

In 2023-2024 alone, SICH-Ukraine produced and delivered over 1.000.000 tourniquets to military units: both as part of the official IFAK first-aid kits of the Ministry of Defense, and in separate batches for the needs of the military.

# UNIQUE ADVANTAGES SUPERIOR TO ITS ANALOGUES

## MARKING TAPE

Due to special grey coating it is possible to make markings even in the absence of a marker, with any sharp object (bullet cartridge, nail, etc.)

## ERGONOMICS

5-40 cm  
Not a single extra millimeter. The optimal size of the platform and the handle, selected as a result of numerous tests in extreme conditions. Maximum area and force of vascular occlusion, compared to other tourniquets.

## METAL FITMENTS

Light but rather resistant duraluminum fitment can stand extreme working loads.

## EXTRA STRONG ADHESION TECHNOLOGY

A special patent-protected technology ensures extra strong adhesion of the strip and its effective operation in wet, dirty, snow-bound conditions, in sub-zero spell and heat.

## NO INJURIES

Soft coating + integral buckle and platform + incorporated patent-protected telescopic mechanism - prevent any entrapment of soft tissues and their atrophy when applying the tourniquet.

## TRIANGLE FOR FIXATION

A special patent-protected triangle shape allows you to fix the stick and the free end of the strip fast and securely.

SICH Ukraine is the leading Ukrainian manufacturer of SICH-Tourniquet — "number one" instrument in modern civil and military first-aid boxes.

Since 2016, it has been the official supplier of the Ministry of Defense of Ukraine, the National Guard and the Police.

SICH-Tourniquet has a special design that works under any weather conditions: being wet, snow-covered, dirty, heated or severely cooled. It quickly stops massive bleeding of the limb and withstands extreme overloads.

This is a one-of-a-kind tourniquet capable of stopping bleeding of limbs with a diameter of 5 to 40 cm, without any entrapment of soft tissues, and is designed so that every millimeter works effectively. It works on the thinnest limbs and in K9.

Today, SICH-Tourniquet is the most widespread means of bleeding control in Ukraine and has already saved thousands of lives.
