Philosophy of RAPPORT

Philosophy of RAPPORT is "to **create a real health and beauty on another level**".
We carefully select technologies that are really effective after carrying out tests and surveys many times.
We are going to expand the technologies to the world in easily available way for customers.

There are many things that hasn't been known to the people all over the world.
With these technologies, some people can remove the cause of worry and be happier.
So we perform the mission and we help to solve the customer's problem.

When we develop OEM products, we always consider if people can be happy with our products and think about not only clients but also customers beyond the clients.
So some offer may be rejected if they only think of benefit of their own. We also teach our clients about how to spread the products to people.

The original meaning of our trade name, RAPPORT, is "**heart of the bridge**." We will continue to creating a real health and beauty by bridging between our unique technology and your mind and heart.
