

# HISPANO TEX

WEAVING TEXTILES SINCE 1956

Passion for the textile industry

# WEAVING SUSTAINABLE FABRICS SINCE 1956

Designing and weaving in Barcelona

We are a **B2B** company of **high-quality fabrics, innovation and industry services.**

Our **100% local production** makes us a local supplier, guaranteeing an impeccable service.

Sustainability in our production process. Committed to **circular economy, recycling** and **reducing textile waste** to minimize our environmental impact.

We are vertical: design, R+D, weaving, dyeing, printing, finishing, stitching and logistics.

# A VERTICAL TEXTILE INDUSTRY

We are vertical in the production of fabrics for the home textile market. We provide services in other sectors, both in **R&D** and in **weaving**.

We are specialists in technical fabrics and custom productions for key clients around the world.

# QUALITY IN OUR DNA

Our strict quality controls in design, supply and manufacturing allow us to guarantee the most demanding requirements of our clients.

## CYCLOPS (ARTIFICIAL VISION)

We have a mobile camera system on the looms that systematically detects warp, fill and nep's defects.

# BEING COMPETITIVE IS OUR PRIORITY

We weave on double-width looms, up to 360 cm spike, with a central cutter, minimizing costs that allow very competitive prices in narrow widths.

Our air looms reach up to 850 passes per minute, optimizing productivity and reducing costs.

# EXPERTS IN RECYCLED FABRICS

90% of our production is made with pre-consumer cotton and recycled polyester from post-consumer plastic bottles.

We have a high selection of fabrics made with **recycled and sustainable fibers**:

## UP FABRICS

By reusing and transforming obsolete fabrics into new textiles, through UPfabrics, Hispano Tex contributes to the circular economy by providing a second life for discarded fabrics.

We promote a closed-loop process. Any residual or discarded fabric becomes thread that we reuse to weave new fabrics. In this way we eliminate waste and preserve natural resources.

### CIRCULAR PROCESS

Hispano Tex converts textile waste of post-industrial and pre-consumer origin into valuable, high-quality recycled cotton fabrics.

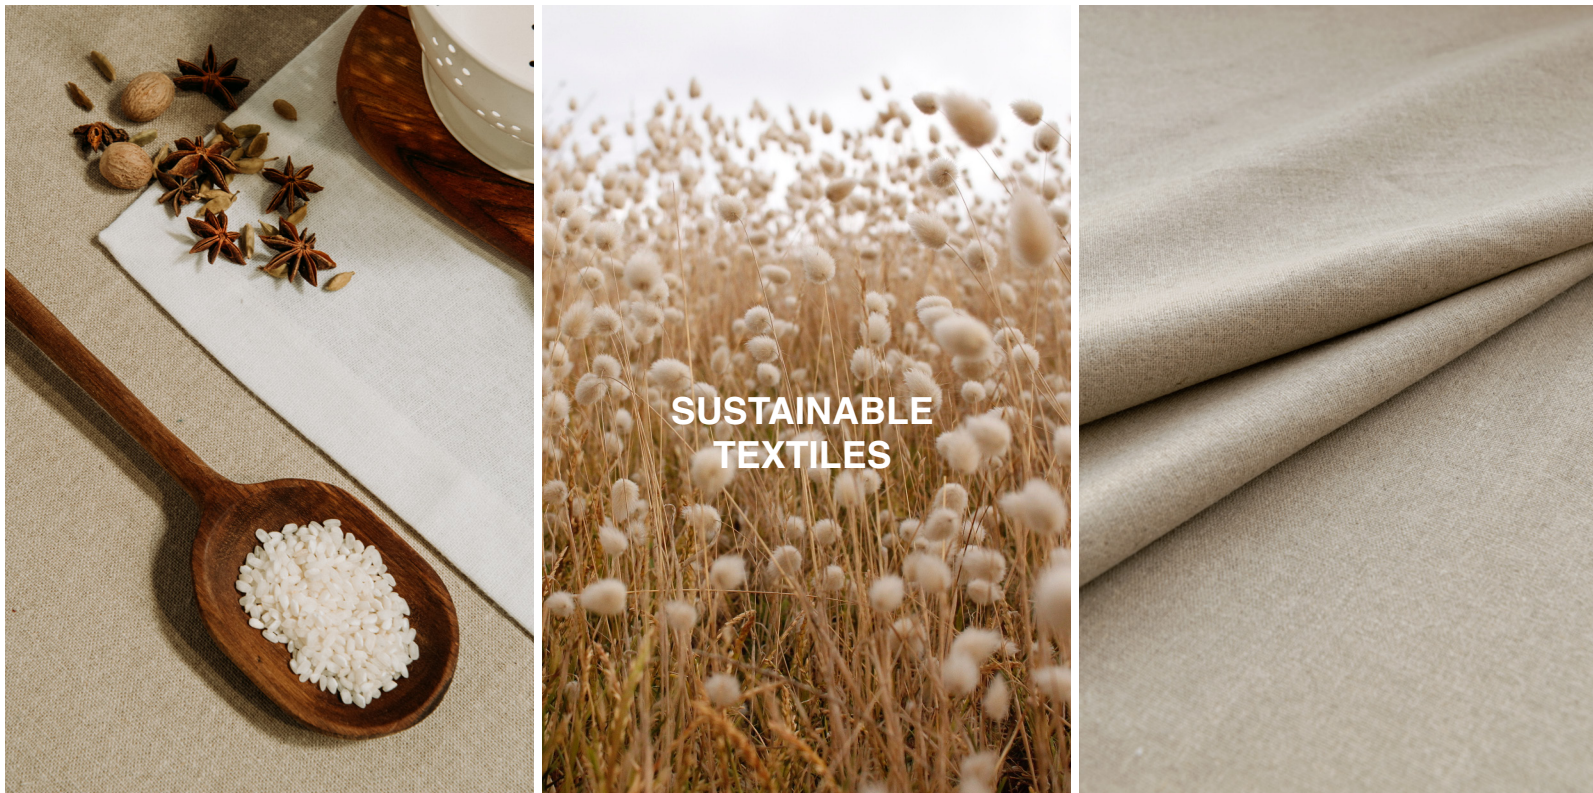

# GREENER FABRICS

## Developing sustainable textiles

Hispano Tex works relentlessly to keep creating and developing new fabric collections that use **sustainable materials and low-impact fibers like linen and hemp.**

Furthermore, we are committed to establishing processes that are respectful to our environment and ecosystem.

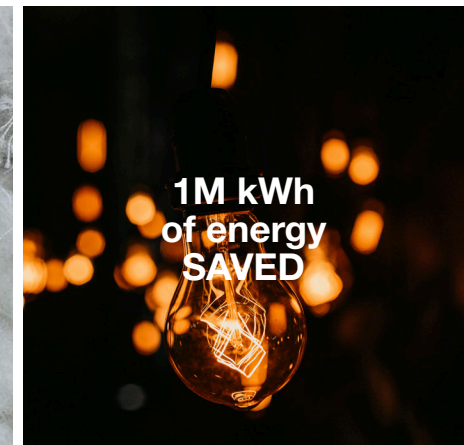

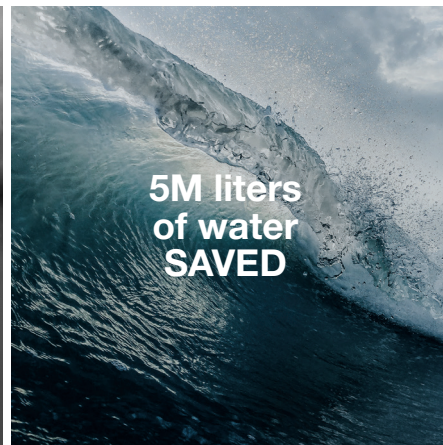

# COMMITTED TO OUR PLANET

## Moving towards a responsible and sustainable industry

Sustainability is a key strategic priority as we strive to offer our customers recycled and innovative eco-friendly products. Combining years of know-how and strategic alliances with key partners, we have become a leading expert in sustainable fabrics and processes.

Our main environmental contribution is **circularity, transforming our own textile waste into new high-end recycled yarn and reducing the consumption of water, energy and CO<sub>2</sub> emissions**, as well as avoiding waste accumulation in landfills and waste ending up in oceans and rivers.

## SINCE 2018 REDUCING THE CONSUMPTION OF NATURAL RESOURCES:
