

TRICOVER[®]

SINCE 1979

Why stockinette?

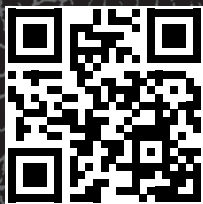

Stockinette envelops the foam removing the friction with its outer cover. This interliner smoothens re-insertion of the external cover (for cleaning/exchange) without damaging the foam surface.

Therefore, an interliner prolongs the lifespan of any comfort item, such as: mattress, pillow, topper, outdoor cushion, seat, toy, etcetera.

Why our stockinette?

Since 1979, clients worldwide place their trust in Heynen Systems B.V. to deliver in-house knitted, single and double jersey stockinette from polyester, recycled polyester and polyamide. Tricover tricot is highly elastic, one-size-fits-all, flame retardant (crib 5) and hygienic. As part of Corporate Social Responsibility, we are GRS and Oeko-Tex certified, employing recycled yarn, non-dyed, non-allergenic, water resistant, etcetera.

Tricover tricot combined with the Tricover machine offers the optimal comfort foam covering solution!

TRICOVER[®]

SINCE 1979

WHY OUR SYSTEM?

Since 1979, Heynen Systems B.V. deploys semi and fully automatic machines that envelop the foam with Tricover stockinette.

Advantages:

- Perfect match between the Tricover stockinette and Tricover machine
- Substantial saving on labour
- Constant quality output
- User friendly
- Solid construction with top quality components
- Automatic adjustment to any foam dimension
- Seamless communication with other equipment types in an assembly line
- Standard remote support (Industry 4.0)

Developed and built in the Netherlands
