Complete Process One Supplier®

Example of a complete pillow line with
blow-filling from our new concept

(for more information visit www.kinnaautomatic.com)

- By using our different pillow lines, you can reach output of 30 pillows/minute
- We offer blow-filling, vacuum-filling and carded fiber
- Choose from different edging technology such as ultrasonic, overlock and lockstitch

WE INNOVATE AUTOMATION

Pillows

Complete lines

We turn your production of filled pillows into a profitable automation process with a higher efficiency and free up of resources. Using our CPOS® concept from the opening and weighing of the fiber to the filling of the product as well as the sewing and packing process, all your needs are covered by using one partner: ACG Kinna Automatic

Stand-alone machines

We offer various stand-alone machines which are adjusted to fit your production requirements. This allows you to update your current production line to improve output and you can also build your complete production line step by step over time.

Packing machines

We offer many different solutions for the packing of your pillows, all adapted to your requirements. Some customers prefer the press pack, others roll pack and some to pack directly into the carton. We have all the solutions that you need when it comes to packing.

Quilts

Complete lines

We turn your production of quilts into a profitable automation process with increased output and free up of resources.

Stand-alone machines

our unique new square corner solution

(for more information visit www.kinnaautomatic.com)

- By using our different quilt lines, you can reach an output up to 7 quilts/minute
- Choose from different edging technology such as ultrasonic, overlock and tape edging
- New unique tape edging system with an output of 6 quilts/minute

WE INNOVATE AUTOMATION

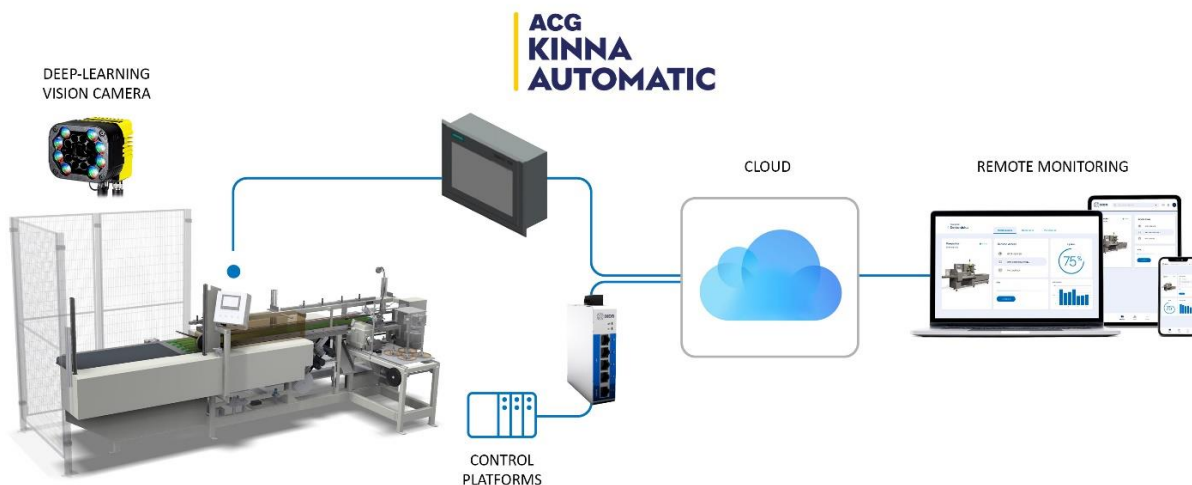

COMPLETE PROCESS – ONE SUPPLIER

What does the concept Complete Process One Supplier® really mean?

It means ACG Kinna Automatic, as sole supplier can offer you a complete customized automation solution for the whole production chain, from the opening and weighing of the fiber to the filling of the product as well as the sewing and packing process including a Vision quality control. Imagine one partner, one installation and one freight. All your needs are covered.

It's easy to understand all the benefits you gain when using one experienced business partner as responsible project leader - compared to combine several different suppliers where you must act project leader yourself. We think your valuable time can be spent on better things.

Let ACG Kinna Automatic take your quality control into the future with Vision

WE INNOVATE AUTOMATION

The well-known Nowo brand is now a part of ACG Kinna Automatic

As part of our new concept CPOS® where we supply a complete solution for the entire production chain, we acquired the Finnish brand Nowo, known for its experience and manufacturing of machines for the initial process of fiber opening, scaling and filling.

Did you know that NOWOROLL is patent protected technology developed and introduced to the market already in the 80s? Still to this day NOWOROLL is the most versatile fiber-ball manufacturing solution on the market and in combination with our filling system with scales it is one of our bestselling equipment.

Our vision: To provide the world with innovative automation
