ABOUT US:

Ditex SM Ltd. is a family-owned business, established in 1997 in Sofia, Bulgaria. We are one of the leading manufacturers of home textiles on the Balkans, specializing in the production of filled articles like duvets, pillows, ultrasonic bedcovers, mattress protectors and cushions.

Ditex SM Ltd. has two production plants – in Sofia and in Vratza (Northwest Bulgaria) - which employ a total of about 90 workers and 15 staff members on more than 6000 square meters of working area. The production capacities are increasing annually thanks to regular investments in new machinery and improvement of energy consumption and efficiency. The factory in Vratza is our main production facility for filled products like duvets, pillow, bed covers and mattress protectors. Currently we have 3 quilt production lines, which are almost fully-automated, 1 ultrasonic bedcover line and 2 pillow lines, which can produce a large variety of pillows. On a daily basis, we have the capacity to produce about 3000 quilts 1500 bedcovers and 3000 pillows. Furthermore, the company devotes resources to upgrading the staff qualifications and expanding the product gamut to match the current trends and demands of the market. Just recently, we have developed a production line for outdoor textiles, where we can manufacture pallet mattresses, back rest cushions, floor cushions and many other items for your garden collection

Throughout the years, we've proven ourselves as a reliable supplier, capable of satisfying the needs and demands of our customers. Our products are sold in over 20 countries in Europe and Asia and in some of the largest supermarket chains like Kaufland, METRO Cash and Carry, Lidl, ACTION, Alcampo, GiFi, Moebelix. On a daily basis, we export trucks to our clients in Belgium, France, the Netherlands, Italy, Germany, Hungary, Greece, Cyprus, Turkey, etc.

Ditex is a socially-conscious company. We have successfully passed an amfori BSCI audit and all of our articles are certified with an Oeko-Tex Standard 100. Furthermore, we extend our responsibility to our supply chain by carefully selecting our raw material suppliers, who share our values and are holders of BSCI certificates.

Ditex SM Ltd. is developing with a steady positive pace, which is representative for the good managerial capacity of the company. The company's vision will remain the same – improving the production processes to offer high quality products at an attractive price; aiming to remain the leading producer of home textiles on the local, and a competitive one on the European market.

BUYING GUIDE FOR DUVETS:

*How to chose the best duvet
for your needs?*

01 MATERIAL:

— NATURAL DUVETS

- Natural duvets are more durable and last longer.
- Provide better thermal regulation excel in keeping you warm in the winter and cool in the summer.
- Superior moisture regain – keep you fresh by absorbing the body fluids/ moisture/sweat and this way making your skin "breathe".

— SYNTHETIC DUVETS

- Anti-allergic – all synthetic materials are inherently hypo-allergenic; consequently, they are less likely to trigger or aggravate allergies.
- Easy care – easy to wash and quicker to dry.
- Budget option.

02 FILLING WEIGHT

The filling weight of the duvet determines the degree to which the to duvet will retain the heat released from the body, or a measure of how warm you will be during the night. The higher the filling weight, the better heat retention and the warmer you will feel. The appropriate filling weight of duvet is usually determined by two main criteria - the current season and the age and preference of the person using the duvet.

— SEASON

- A light duvet with filling weight of 150-200 gsm would provide less heat retention, making such duvet a perfect option for the summer.
- 200-250 gsm is an ideal choice for the spring.
- Whereas, a filling weight of 250-300 gsm, would provide enough warmth to keep us comfortable during the chilly autumn nights.
- Above 300 gsm would provide an optimum heat retention, which is desirable for the cold winter nights.

— AGE AND PREFERENCE

- For adults, the choice of filling weight is very subjective, as people have different preferences – some prefer to feel warmer, others seek freshness
- Young children tend to be more active while they sleep, so choosing a duvet with a higher filling weight might cause overheating. It is recommended to choose a filling weight of 250 gsm.
- Toddlers and babies experience difficulties in regulating their own body temperature and it can be dangerous for them to be tucked into a high filling weight duvet. Also, baby beds are smaller and would naturally preserve the heat better, requiring less heat to be retained in the duvet.

FILLING WEIGHT RATING SYSTEM

VERY COOL	150 GSM	    
COOL	200 GSM	    
WARM	250 GSM	   
HOT	300 GSM	  
VERY HOT	350 GSM	

PRODUCT CATALOGUE 2022-2023

BUYING GUIDE FOR PILLOWS:

*How to chose the best duvet
for your needs?*

01 BASED ON YOUR SLEEPING POSITION:

— SIDE SLEEPERS:

- More than ½ of the population in europe has confirmed to sleep on their side.
- To keep the neck and spine in perfect alignment, side sleepers should choose a firm pillow, with a height similar to the distance between their neck and shoulder.
- Suitable pillows for side sleepers would be memory foam and orthopaedic pillows.

— FRONT SLEEPERS:

- Front sleepers are people who prefer to sleep on their face and belly.
- Ideally, they should opt for a soft and thin pillow, so that their neck and spine can remain neutral and aligned.
- Recommended are pillows with soft filling like microfibres or feathers and down.

— BACK SLEEPERS:

- Back sleepers are people who prefer to sleep on their backs; consequently, they should go for a medium to firm pillow with an oval shape.
- Ideal choice for back sleepers would be a memory foam pillow with medium firmness to support your neck, while your head sinks in the middle. This way the neck and spine are kept aligned.

02 FILLING MATERIAL:

— HOLLOWFIBRES

- The most common filling material for pillows is polyester hollowfibres.
- hollow conjugated fibres provide have a spring-like form to ensure a good bounce-back effect. Consequently, pillows with such filling can keep their shape for a long period of time.
- anti-allergic – all synthetic materials are inherently hypo-allergenic; consequently, they are less likely to trigger or aggravate allergies.
- easy care – easy to wash and quicker to dry
- budget option.

— MEMORY FOAM

- the main advantage of memory foam pillow is that it the foam spreads the weight and pressure more uniformly than other fillings, so the pillow would mould itself to the shape of your head.
- the firmness level of the memory foam pillow is controlled by the thickness of the foam. It varies from soft to medium to firm, to provide a perfect solution for every need.
- memrory foam filling can come in two forms – solid or shredded.
- Solid memory foam block would provide optimal support for your neck, while your head sinks into the pillow.
- Shredded memory foam also provides good support, but in addition, the filling can be moved around for a plusher feel.

— NATURAL

- the most common natural filling for pillows is down or feather-and-down.
- other natural fillings are wool, cotton, bamboo.
- pillows with natural filling are very soft, with good moisture control and provide good support for your neck.
- more durable than pillows with synthetic filling.

DITEX

ELEGANCE *Collection*

A brief collection of high-quality duvets, pillows and mattress protectors made from materials with special functions

- COOL FEEL
- STRESS FREE
- ALOE VERA
- LAVENDER
- SOFT LIKE DOWN

COOLFEEL™ TECHNOLOGY:

- Special technology that keeps the body fresh by regulating the humidity levels
- The fabric is impregnated with microcapsules that absorb the heat from the body
- Works on several levels:
 - > Sensory level – creates a lasting sense of freshness
 - > Physical level – absorbs humidity
 - > Endothermic level – reduces the local temperature

COOLFEEL™ PILLOW

50 x 70 cm / 600 grams

WOOL TECHNOLOGY:

The articles included in our wool collection retain the natural breathable properties of wool and cotton. The blend creates a circulation of air to keep you cool during the summer and traps air to create an insulating layer when required in the winter.

WOOL FIBRES COMPARED TO OTHER FIBRES:

- Provide better thermal regulation than synthetic fibres. Consequently, you need less weight to achieve the same level of heat retention.
- Superior moisture control
 - > Keep you cool during the summer and warm during the winter.
- Naturally self-cleaning fibres
 - > repel dust mites, mould spores and other bacteria
