BARINE

# Barine Dreams

To be a core part of  
building a more  
habitable earth

To change the way  
of how and how  
much we consume

To sell 100% of our  
products from  
sustainable sources  
only

To see our  
employees, create  
with us till their  
retirement

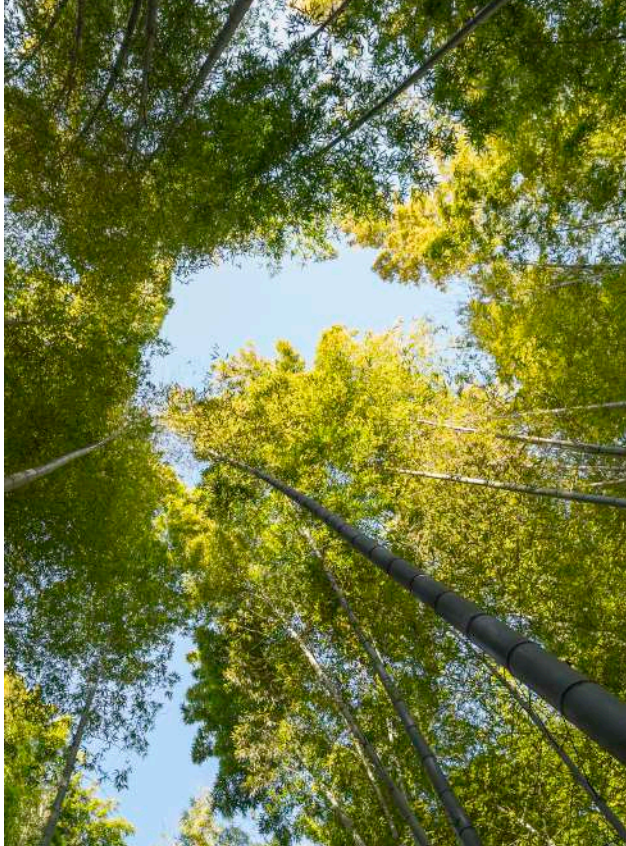

And after all we  
would like to be a  
world organization  
to distribute our  
philosophy to every  
people on earth

To create values

# WORD OF CEO MOTTO: RESPECT NATURE

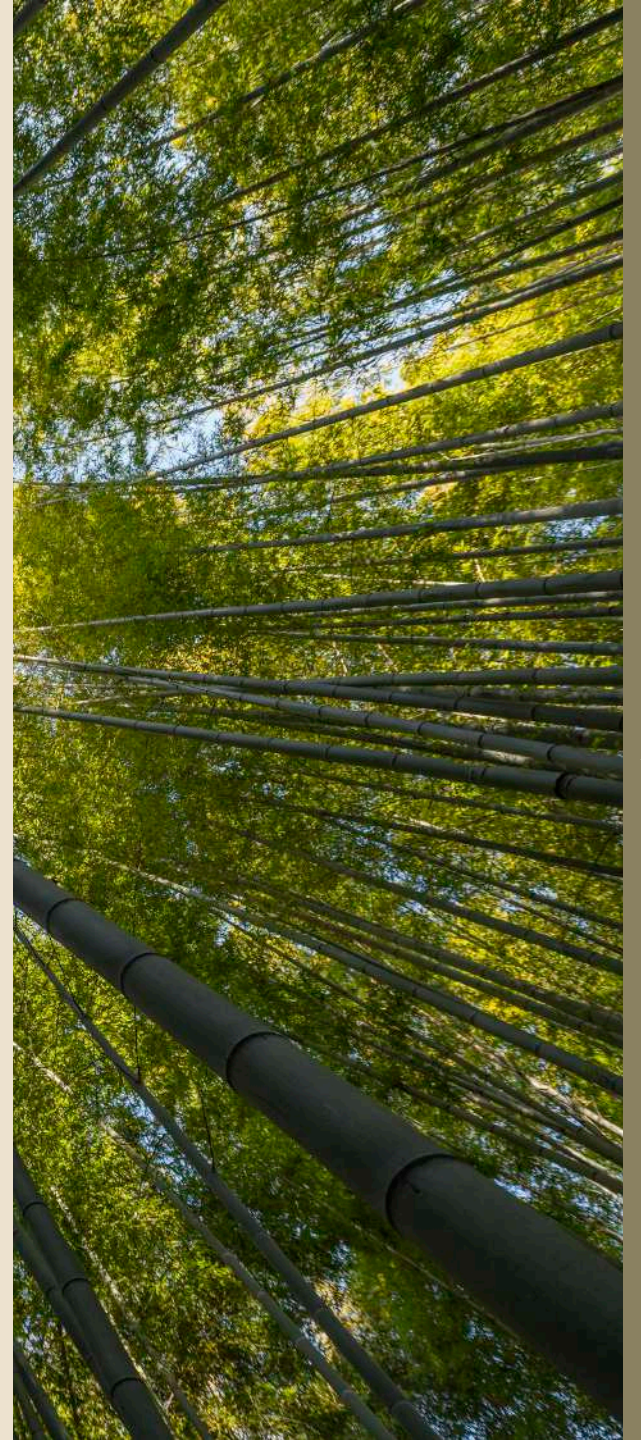

From comfort zones we watch on as Mother Nature fights the forces of over-population, reduced biodiversity and other environmental problems. We're reminded that there is no other time to start to control our common destiny and have a positive impact. We are paying respect to the planet and its habitants and best way to start this is to use resources in the best conditions possible.

Respecting helps us revive our relationship with nature and embrace a more holistic, 'circular' way of living.

It is still in our hands to protect our common future. Sustainability should be a global attitude and we are proud to have strategic sustainable growth targets. We believe in to give any efforts to make a Home & Living collection more sustainable each day that makes a difference. We are working hard to make not only our own collection but also our customer's collections more sustainable.

To us fashion is not just about looking good. It's also about doing good, doing what is right and feeling good about it – with respect for people and the environment. We reinterpret classics and give them a contemporary feel. We never compromise on style and Quality only. But at the same time, we make products that takes a stand.

# Carbon is vital but only in the soil not in the air we inhale

Carbon is the main component of soil organic matter and helps give soil its water-retention capacity, its structure, and its fertility. On the other hand, excess of Carbon in the atmosphere is the main threat to our climate and all related balance of our habitat. We all need to give effort to keep Carbon in the soil.

# Preferring the more sustainable sources is a natural reflex of Barine Sustainable Production

34% of all sold products made in 2022 is done complying with certification traceability.

Within the all sales of 2022

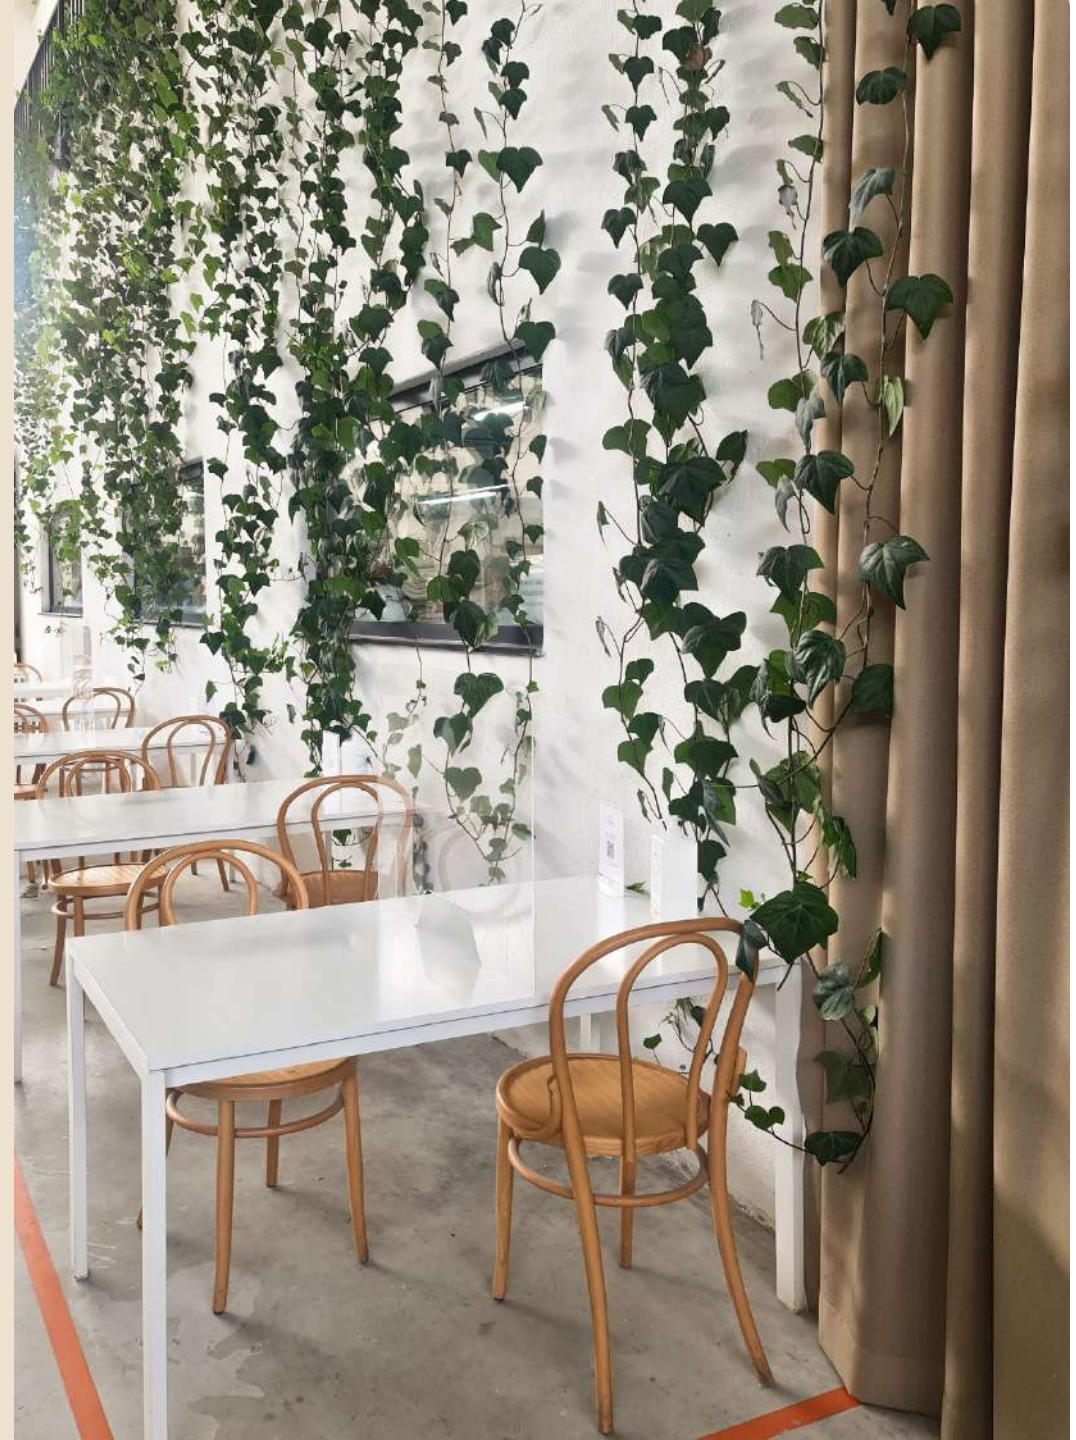

30% is the ratio of organic production

4% is the ratio of BCI credited production

=> Also we do more contributions to BCI to contribute more to fair production of raw material

[Click to download our OCS and GRS Scope Certificate](#)

[Click to download our GOTS Scope Certificate](#)

# Chasing the new possibilities

New Sustainability Goal

Declared in 2023 :

Barine achieved a good shift to a high ratio of sustainable raw material use but we think using less our using recycled content is the exact meaning of sustainability.

We have been trying to promote recycled content for 5 years and Barine collections will go on promote recycled content and we are targeting to 10% of our products will come from recycled content within the next 3 years.

## Recycling Benefits

Recycled cotton yarn helps to save the environment because it manages natural resources, waste and pollution in a very efficient way.

Have you never thought about the benefits of using recycled cotton yarn instead of one produced with virgin cotton? Do you know the savings it brings? These are some of the positive effects you can produce in our environment when you buy 1,000 kilogram of our recycled yarn:

- 4,800kg less of water consumption
- 16.5kg less of chemicals
- 233.8kg less of CO2 into the atmosphere
- 3,500kg less of contaminated sewage
- 500kw/h less of energy consumption

## To following the improvement

Barine has been sharing its daily use of carbon sources and also the systematic follow of any pollutants on HIGG platform

since the year 2021 to measure its own

improvement and see the results of planet-first habits

# Training Programs

- In parallel to its vision Barine is not only a company offering Sustainable goods but Barine is a company living in a Sustainable way as much as possible and trying to find new ways to improve it
- We started this by educating our team members on the way of working at our facilities and also give the information they may make a part of daily life and can inspire their families to do so. We believe even the little steps will cause big impacts in the end
- Promoting environmental information to communicate green living information and electronically messaging to spread this to their relatives
- For each teammate, we are donating one tree on their birthdays so they have 1 new tree **every year** and they can be a good **impulsive** to their social friends and relatives

## The Barine way of efficiency

The first thing we do during our production steps is to reduce our waste as each material uses some carbon till they reach our facility and we are morally responsible to use them as much efficiently as possible. Efficient consumption is a daily process but also we pay a great effort to use the 2<sup>nd</sup> qualities and remedies to be made another product that can add value and be upcycled instead of throwing them away as wastes

## Eco-Friendly Packaging

- We have calculated that the use of individual polybags instead of 1 bulk polybag per 1 master carton causes double nylon waste. At the first step we stopped to use individual polybags for our Barine Collection items
- We are offering reusable alternatives for suitable products and we are trying to encourage our customers to accept non-nylon alternatives
- We are still searching and offering new packaging alternatives can reduce the packaging waste

# Eliminating one time use items

Every day we are working to eliminate environmen-polluting items from our lives.

Instead of paper cups, we distributed individual ceramic mugs that are washable after each use to our every colleague.

Instead of paper cutlery wraps we did our washable fabric bags from our own product wastes.

# Composting

We are composting all food and drink wastes and to use that rich soil to feed our plant in our facility and to feed the plants we are growing within our Barine Greening Project

[Click to watch our Daily Composting cycle](#)

## Sun Powered Fabric

Our weaving facility is not only a building for producing our gorgeous fabric but also a clean energy source for the planet

# Fair attitude makes Fair products

- Barine believes the products makes you feel you good if only they are done by people feeling good. Its not a matter of product quality but also an energy and soul transmitted from someone's mood to her/his hand and till to your skin. We cannot dream our high expectations without creating this bridge from first step till to you. Only happy people may the happiness with you.
- Equity for all is our basis for this philosophy and morality to every party is main support
- Barine Collection items are produced with fair labor and with love at fair conditions. Every Barine Product contributes to a more fair community for everyone
- Being transparent is a must and we make our organization controlled by an independent 3<sup>rd</sup> party auditors and they are open for everyone would like to examine
- Our Annual reports prepared by SEDEX are open to everyone.

management system

Barine is a member to BCI to contribute more to eco-sensitive production and decent working conditions for raw material sources. BCI is linked to several environmental issues: Extensive usage of agrochemicals and excessive use of water. Unpredictable weather conditions also endanger the livelihoods of farmers. Fairtrade works with farmers to stop or reduce the usage of agrochemicals and supports them to adapt to changing climate patterns.

Ethical Fabric

thebarine.com

# Ethical Fabrics

Barine is highly aware of the idea that humans and the earth work together to create the society we are all living in.

Barine's mission is based on being **Eco Conscious** and **Socially Aware** which is «to use world resources respectfully and to contribute to the provision of social equality». All developments is made with environmental issues awareness and also driving its following competitors to do so. Beyond complying with regulations Barine's priority is to ensure everyone in its own team and also in its Supply Chain is safe and happy.

Barine is developing ways and organising trainings to make its people behaves in the same vision.

Being ethical to business partners and to our colleagues , behaving ethical to our planet with our choices is the basis of our

BARiNE

# Supporting Slow Fashion

- Barine believes and does the creations with an idea of producing quality instead of quantity and produces garments that can last long years or even a lifetime. Every pieces should be sustainable and doesn't view products as disposable. Because our planet has not enough sources any more and we have to use all raw materials to be efficient and long lasting.
- Slow fashion is a natural lifestyle choice and Barine collections follows the natural instincts to stay conscious and mindful. Every Collection is created to include timeless pieces.
- Every Barine Collection stays within the natural flow speed instead of «faster» and worthy instead of cheaper quality.
- Selecting right raw materials, being environment friendly and still staying ethical is the basis of our developments

# BARİNE Greening Project 2022

SIJAN SEYMA SENGİL

We take our inspiration and resources from the soil. In order to give back some of what we got, we started Barine Greening project. Our main goal is to repair the soil. We use permaculture methods and we follow nature itself and learn old agricultural methods.

With the circular system in both textiles and agriculture, we aim to come forward from recycling. Waste of one of us is the treasure of the other.

This idea we built for a second life; It is an active but non-commercial greening project that makes agricultural lands productive and provides eco-experiences to volunteers using rigorous and conscientious methods.

[Click to here a short video for Barine Greening Project](#)
