Food container with base and lid made of glass by Iris Barcelona

Glass container to store and carry your meal outdoors. Microwave and oven safe (without lid). This container with glass lid is the perfect choice for those users looking for an alternative to plastic containers. We offer an improved glass container, where the plastic lid has been replaced by a glass one. This innovation provides more confidence to our customers when carrying warm food as it is in contact with an innocuous material such as glass.

The base is made of borosilicate glass: a non-porous material that does not absorb odours and flavours. Completely innocuous. Made with harmless material that does not react with any substance, BPA free and extremely heat-resistant. (Up to 520 °C* – temperature for quality controlled, not for conventional use).

The lid is made of tempered glass. The open & lock closure is 100% hermetic and it is made of propylene, a totally safe and BPA free material.

Usage tips

- Glass base is dishwasher, freezer, microwave and oven safe.
- Glass lid is dishwasher and freezer safe

The benefits of Iris glass

Non-toxic and BPA-free material.

Preserves food for a longer time.

It does not absorb odours and flavours.

High transparency.
