

LE FEU - PATIO GAS HEATER

LE FEU PATIO

TRULY ORIGINAL DESIGN AND FUNCTIONALITY

Le Feu Patio is a new addition to Le Feu Fires' exclusive line of high-quality products.

The Le Feu Patio is characterized by round glass that dominates your patio and truly sets it apart from the market's other terrace heaters.

Its cylindrical 5 mm semi mouth blown heat resistant glass is what makes the Le Feu Patio unmatched by any other patio fire design.

High-class hotels and top restaurants in Europe boast of this patio design. This is a sure sign of its exclusive quality and beauty.

Its heating performance also sets it apart.

Conventional terrace heaters typically put out about 2.0 kW of heat. The Le Feu Patio, however, can output up to an astounding 8.7 kW. With that much heat, you can be sure that everyone on your terrace will feel warm and comfortable.

But it does more than just offer warmth. The Le Feu Patio never fails to attract admiring looks from everyone on your terrace.

The smallest details serve to offer a complete design experience.

High quality twin wheels let you easily move the Patio anywhere.

Electric ignition and easy level control ensures easy operation.

The Le Feu Patio comes with lava rocks. This lends an aura that only natural fire can match.

The hatch under the Patio conceals the gas bottle -nothing should distract from the design's natural beauty.

The Le Feu Patio boasts of the latest in technical safety features and is, of course, CE approved. One feature makes sure that the gas shuts off automatically whenever the fire is extinguished. And what if your heater should tip over? Don't worry! It has a built-in "tip-fuse". This component immediately shuts off the gas if the unit tips more than 45 degrees.

SPECIFICATION

MATERIAL: Black powder coated steel, 5 mm semi mouth blown heat resistant glass.

H base: 822 mm - **H glass:** 494 mm - **Ø:** 400 mm - **Full height:** 1316 mm **Weight:** 27,4 kg

Max heat emission output: 8.7 kW

Up to 32 hours burning time

CE Approved

Weather and water resistant powder coating

Lava rocks included
