

Company profile

Le Feu is a Danish company that was established in 2017.

The iconic Danish design, flexibility and environmental approach have given Le Feu's bio-fireplaces an extremely positive reception in the market and are now sold in 17 countries. worldwide.

The story of Le Feu is based on true passion and years of experience in the industry, resulting in the creation of an innovative and highly relevant bioethanol fireplace product.

For generations, the Lauritsen family has worked with fireplaces and wood-burning stoves to define fireplaces as the heart and gathering place of Danish homes.

As the 3rd generation, Søren Lauritsen naturally became part of the "warm universe" where, in his youth, he explored the trade and learned the craft in his grandfather's fireplace shop.

Advantages of Bio fireplaces

Le Feu bio-fireplaces are aimed at the general consumer but also for B2B.

The competitive price level means that everyone can afford a fireplace in their home.

Le Feu fireplaces are easy to install, does not require a chimney and can be moved around in the house or used on the patio.

Legal restrictions on common law wood burning stoves across Europe, means that more consumers are looking for an alternative heating solution. With increasing prices of gas and electricity, bio-fireplaces are a very good supplement to the house heating.

Today and in the future, the consumer has a strong focus on the environment. Bio-ethanol is made from plants and roots from nature. This gives the bio-fireplaces a strong environmentally friendly profile in relation to the other fireplace solutions on the market.

The population density in big cities is increasing. Extensions to fireplaces are not recognized in the high-rise buildings, which makes Le Feu bio-fireplaces an attractive solution in the large new buildings and homes.

What is Bio-ethanol

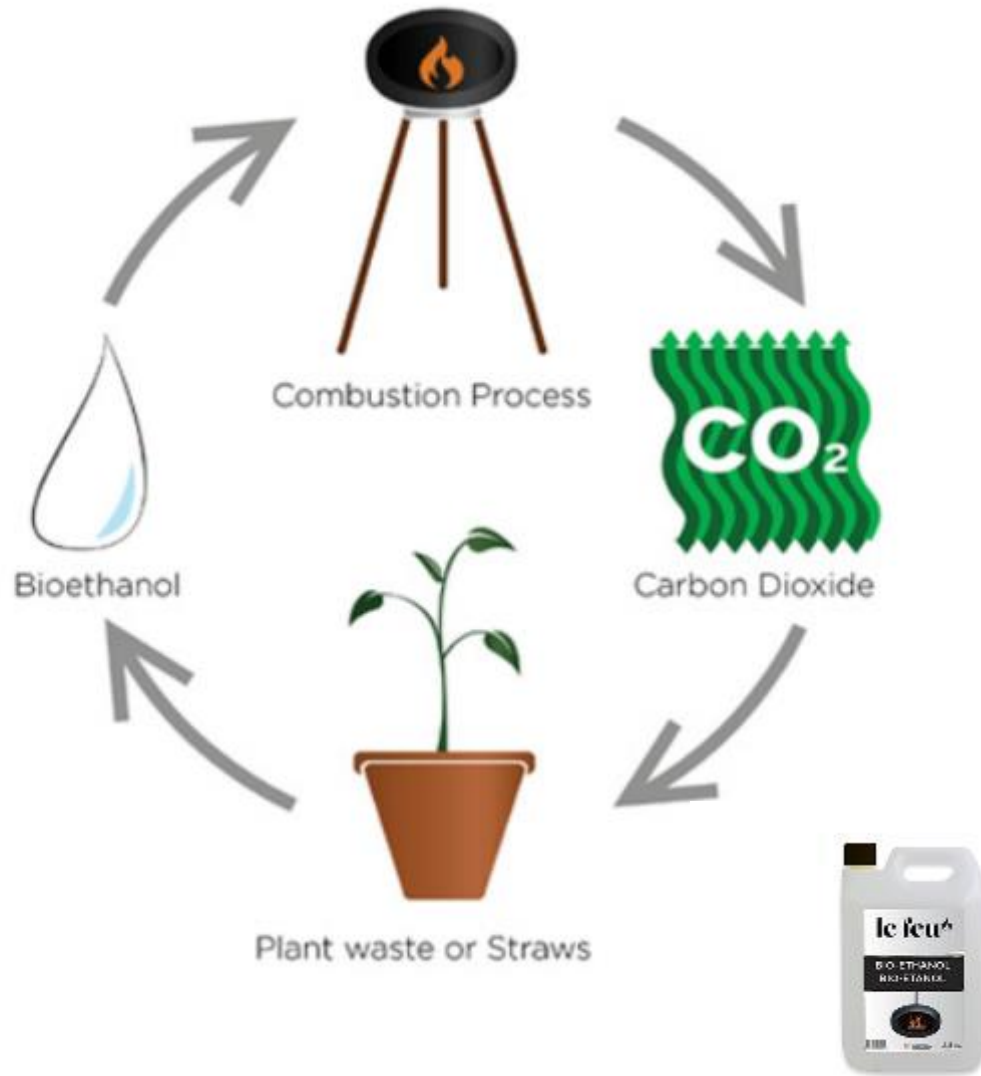

In recent years, bio-ethanol has become more known and accepted around the world due to the many advantages of using bio-fireplaces compared to other fireplaces. But what is it exactly? And how is it made?

Bio-ethanol is a type of strong alcohol. It is being produced almost the way as other spirits. The bio-ethanol that you use in your bio-fireplace is made from excess organic waste mostly from agriculture.

It is very important to use bio-ethanol with as high level of purity as possible.

We recommend it to be at least 95% pure. Some bio-ethanol products on the market are diluted with water in order to keep the price low. It means that the bio-ethanol might smell and smoke.

Le Feu has developed Le Feu bio-ethanol. It has proven not to smell or smoke.

Safety and maintenance of Bio-ethanol fireplaces

We strive to provide a safe and secure user experience. By using modern and well-known technologies the Le Feu fireplaces are constructed to ensure the highest level of safety.

Every fireplace is made from high quality materials and final inspections are hand made before leaving the factory.

The Le Feu fireplace is made using our unique completely sealed and safe SafeBurn technology.

The burner is spill proof, so even in extreme situations or when moving the fireplace, the burner will never leak bio-ethanol.

The burner is installed with a ceramic fiber which absorbs the bio-ethanol like a sponge. Therefore, even a full burner can be turned upside down without spilling.

The burner is easily shut off, by using the Le Feu tool.

The Le Feu fireplace maintenance is simple. No parts need to be serviced like with other fireplaces.

All you need to do is to keep the fireplace clean with a damp lint free cloth and the burner is easily cleaned by wiping the steel parts with a cotton cloth moistened with a small amount of bio-ethanol.
