# Smokeless Fire Pits

Relish in fireside experiences without the inconvenience of a smoky flame. Our Signature 360° Airflow super-heats air to burn off smoke before it can get to your clothes and hair. And without that pesky “post-fire” smell, teary eyes, or a game of musical chairs to dodge smoke, you can enjoy ultimate warmth without sacrificing comfort.

## How it works

### 1- Secondary Burn

Vent holes near the top of the burn chamber allow preheated oxygen to fuel the flame, resulting in a more complete combustion and a hotter fire with less smoke.

### 2- Precision Base Plate

Allows oxygen to feed directly to embers from below. This helps to burn fuel faster and hotter, while allowing consumed ash to fall through the base plate.

### 3- Ash Pan

Catches loose ash and prevents it from clogging vital airflow. The ash pan also acts as a heat shield preventing your fire pit from scorching the ground beneath it.

### 4- Airflow

Rising hot air and the absence of oxygen created by the combustion process pull air through the bottom vent holes. This air movement fuels the fire at its base while also providing a boost of preheated air through the vent holes at the top of the burn chamber.
