

KREMER
PIGMENTE

Kremer
Watercolors

Kremer Watercolors

The production of Kremer watercolors is solely done by hand in the Color-Mill in the Allgäu region. When selecting the color ingredients only high-quality Kremer pigments are used. These are combined with Kremer Watercolor Medium based on Gum Arabic. The selection of over 130 different shades is characterized by an extraordinary luminosity. Kremer Watercolors are very lightfast*. Due to the maximum pigment concentration in the pan, they are also extremely productive.

* With the exception of (#3721418) Kremer Watercolor – Madder Lake and (#560008 – #564008) Kremer Watercolor – Fluorescent Pigments.

Make your own watercolor paint

Kremer pigments offer a great variety of color hues and a brilliance superior to the properties of the range of commercially available products. The Watercolor Set offers the ideal introduction to the creation of your own personal color. In addition to all the important working materials, the set contains three easy-to-process pigments. The indication of exact quantities and mixing ratios helps the user with the first steps.

Paint-Making Set

14304
Paint-Making Set,
Watercolor

The set contains:

Mortar and pestle, Kremer Watercolor Medium, Gum Arabic, Cobalt Blue Dark, Venetian Red, Italian Gold Ochre Light, Syringe & Watercolor Pens, Sketchbook, Watercolor Brush, Recipes

Recipe for Watercolor

Mix and grind the Watercolor Medium with a pigment powder until it forms a smooth, lump-free paste. The smooth watercolor paste can be applied directly or filled into pans. Fill the paste into pans in three thin layers by using a syringe. Wait until one layer is thoroughly dry (let it harden overnight) before adding the next layer, to prevent paint cracking. Allow to dry well at room temperature and low humidity. Each recipe is enough for three pans.

Recipe for Gum Arabic solution

Pieces of Gum Arabic can contain natural impurities, so the gum solution should be filtered. Stir the gum arabic into cold water then put it into a bain-marie. Another solution is to fill the pieces into tights which hold back impurities. Gum Arabic will also dissolve in cold water but this may take 2–3 days. Gum Arabic solutions spoil easily and should be stored in a refrigerator. Durability of the solution can be enhanced by adding preservatives.

Further information on the binder gum arabic, suitable pigments for the production of watercolors and an application video can be found at:

Watercolor paint recipes

For a selection of particularly popular pigments, such as Ultramarine Blue, Terra di Siena, Veronese Green Earth or Vine Black you will find detailed information for the production of your own watercolor at:

Notes

Color illustrations

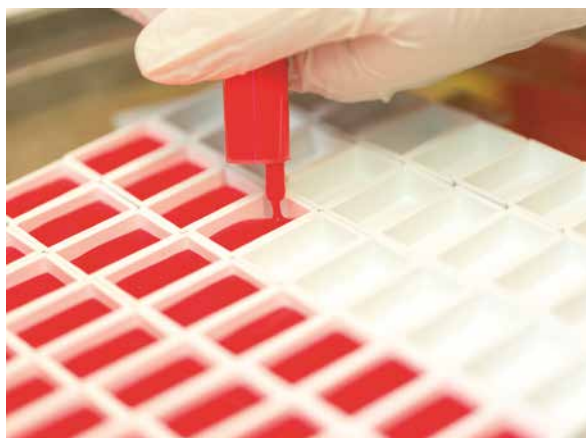

The color illustrations give you an idea of the color hue. Print-related color deviations may occur.

Cracks, bubbles and other optical blemishes

Kremer watercolors are all handmade in Germany. We consciously refrain from the use of machines in the manufacturing process. As a result, each watercolor pan is unique and does not resemble any other. The bonding agent gum arabic and the additives honey and glycerine are natural products, which are subject to natural variations. In addition, each pigment needs a different amount of binder. As a result, some watercolors may show cracks, bubbles or other optical blemishes. However, these do not compromise the quality of the watercolor.

Cleaning Brushes

Brushes can be cleaned with Olive Oil Soap (#78045). It coats natural brush bristles with a protective layer of oil, leaving them smooth and extending their life.
