Frankfurt/Main, 22 March 2021

**Uponor has brought all of its BIM solutions together on one powerful platform. Planners can find the entire product library here in open BIM standards, together with smart tools for designing with Revit and reliable service support.**

- **New BIM platform for planners and designers**
- **BIM library, tools and service in one centralised location**
- **Comprehensive support at every stage of a project**

Building Information Modeling (BIM) stands for the digitalisation of civil engineering and the transition of conventional methods for planning construction process into digital environment. The method of initially planning virtually followed by real planning and construction is becoming increasingly established throughout Europe. This presents technical planners with the challenge of solving complex design and construction tasks in as much detail and as efficiently as possible. Uponor has developed a new BIM platform that offers planners optimum support when working with BIM. The company has adopted an 'all in one' approach, bringing the complete range of its BIM solutions together in one single place – this can be found at [bim.uponor.com](http://bim.uponor.com).

The platform comprises the entire product library in open standards as well as smart tools for more efficient planning in Revit. On top of this, there is reliable service – Uponor's BIM experts are there for customers at every stage of a project and will support them through the entire project life cycle. The platform has been designed with BIM planners throughout Europe in mind as it is multilingual and features country-specific product portfolios. It affords access not only to the area of buildings, but also to BIM solutions for infrastructure projects.

### **Library: BIM data for all products**

The easier it is for designers to select the latest product data, edit it within their software and flexibly share it with other planning partners, the better and quicker they can work. Uponor has taken all of these criteria into consideration. The library comprises the latest BIM models

for all Uponor products and systems for hygienic drinking water supply, energy-efficient heating and cooling, and reliable local heat distribution systems. All of a product's functions, sizes and versions are logged in the same model. The model contains not only the 3D geometry, but also other information such as technical attributes, identity data and the number of items per pack. A product preview provides a simple overview. The platform features data-driven updates, meaning its content is always up-to-date.

### **Open standards make collaboration easier**

Uponor sets great store by open standards as this means users aren't tied to specific BIM software. The Uponor products are made available in multiple CAD and BIM formats, such as Revit, IFC and DWG. Thanks to the integrated openBIM industry standards, data can be used and shared across different software, giving technical planners the freedom to participate in any BIM project irrespective of the software used by the other project stakeholders.

### **Tools: plan more efficiently in Revit**

Uponor additionally provides tools that automate and optimise the designing process in the most widely used BIM software Revit. For example, users can use a plug-in to integrate the entire BIM library directly into Revit, making it even easier for them to search for the right objects, position and edit them, and even develop entire systems. Intelligent functions help to solve complex designing problems efficiently and in compliance with the standards.

### **Service: support at every stage of a project**

Uponor has many years of experience with BIM projects and is now making this expertise available to all of its planning partners. Customers get support in the design of Uponor systems by the service team. Upon request, Uponor BIM experts can also provide support at every stage of the project life cycle. All of this improves the quality, efficiency and safety of the planning process – and the building projects, the clients and the users ultimately benefit too.

**Uponor\_BIM\_Pic1.jpg**

Uponor has launched a powerful new online platform, providing all of its BIM solutions in a single place.

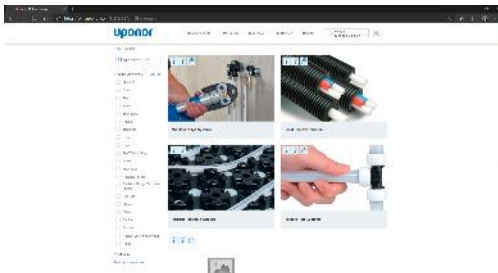

**Source: Uponor**

**Uponor\_BIM\_Pic2.jpg**

The platform provides access to relevant product data, intelligent tools and design services by a team of experienced BIM specialists.

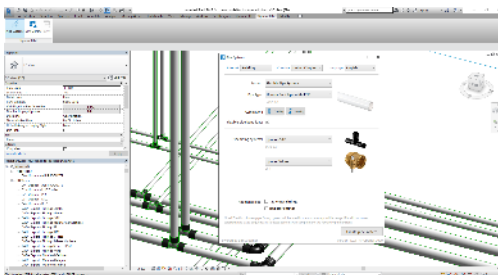

**Source: Uponor**

**Uponor\_BIM\_Pic3.jpg**

The library of the platform contains BIM models of the entire Uponor product range and is based on openBIM standard, enabling a seamless data exchange.

**Source: Uponor**

**Uponor\_BIM\_Pic4.jpg**

By using the smart functionalities of the platform, BIM objects can be placed directly into a project.

The following information will help you publish this press release on your online and social media channels.

### Meta description

Uponor has brought all of its BIM solutions together on one platform, including the entire product library, smart tools and reliable service support.

### Social media / newsletter teaser:

#### Facebook

Uponor has brought all of its BIM (Building Information Modeling) solutions together on one powerful platform. 🛠️ Planners can find the entire product library here in open BIM standards, together with smart tools for designing with Revit and reliable service support. □

#### Twitter

Uponor has brought all of its #BIM (Building Information Modeling) solutions together on one powerful platform. Planners can find the entire product library here in open BIM standards, together with smart tools for designing with #Revit and reliable service support.

### Uponor

Uponor is one of the leading international providers of solutions that move water for buildings and infrastructure. The company is rethinking water for future generations with its safe drinking water delivery systems, energy-efficient radiant heating and cooling systems, and reliable infrastructure solutions. With a commitment to sustainability and a passion for innovation, Uponor is developing new technologies and systems that build confidence and enrich people's lives. Uponor employs about 3,700 professionals in 26 countries in Europe and North America. In 2020, Uponor's net sales totalled approximately

€1.1 billion. Uponor Corporation is based in Finland and listed on Nasdaq Helsinki.
