The universal DIN-DVGW ball valve

The perfect partner for gas, drinking water and heating

Whether it's gas ...

... drinking water, heating or compressed air, the universal 492/594 ball valves from IMT have all of the licenses they require for installation into any pipe system. Whether it's for heating supply or return, cold or hot-water pipes or for gas water heater shut-off valves, this valve belongs to the standard equipment on any workshop truck.

Time ...

... is money, more than ever. Modern installation has to be done fast, flexibly and inexpensively without neglecting standards or reliability. You've got the right equipment with the 1/4" to 2" universal ball valves from IMT combined with the matching MULTILOGO labeling system. You've always got the right ball valve without having to double or triple stock items.

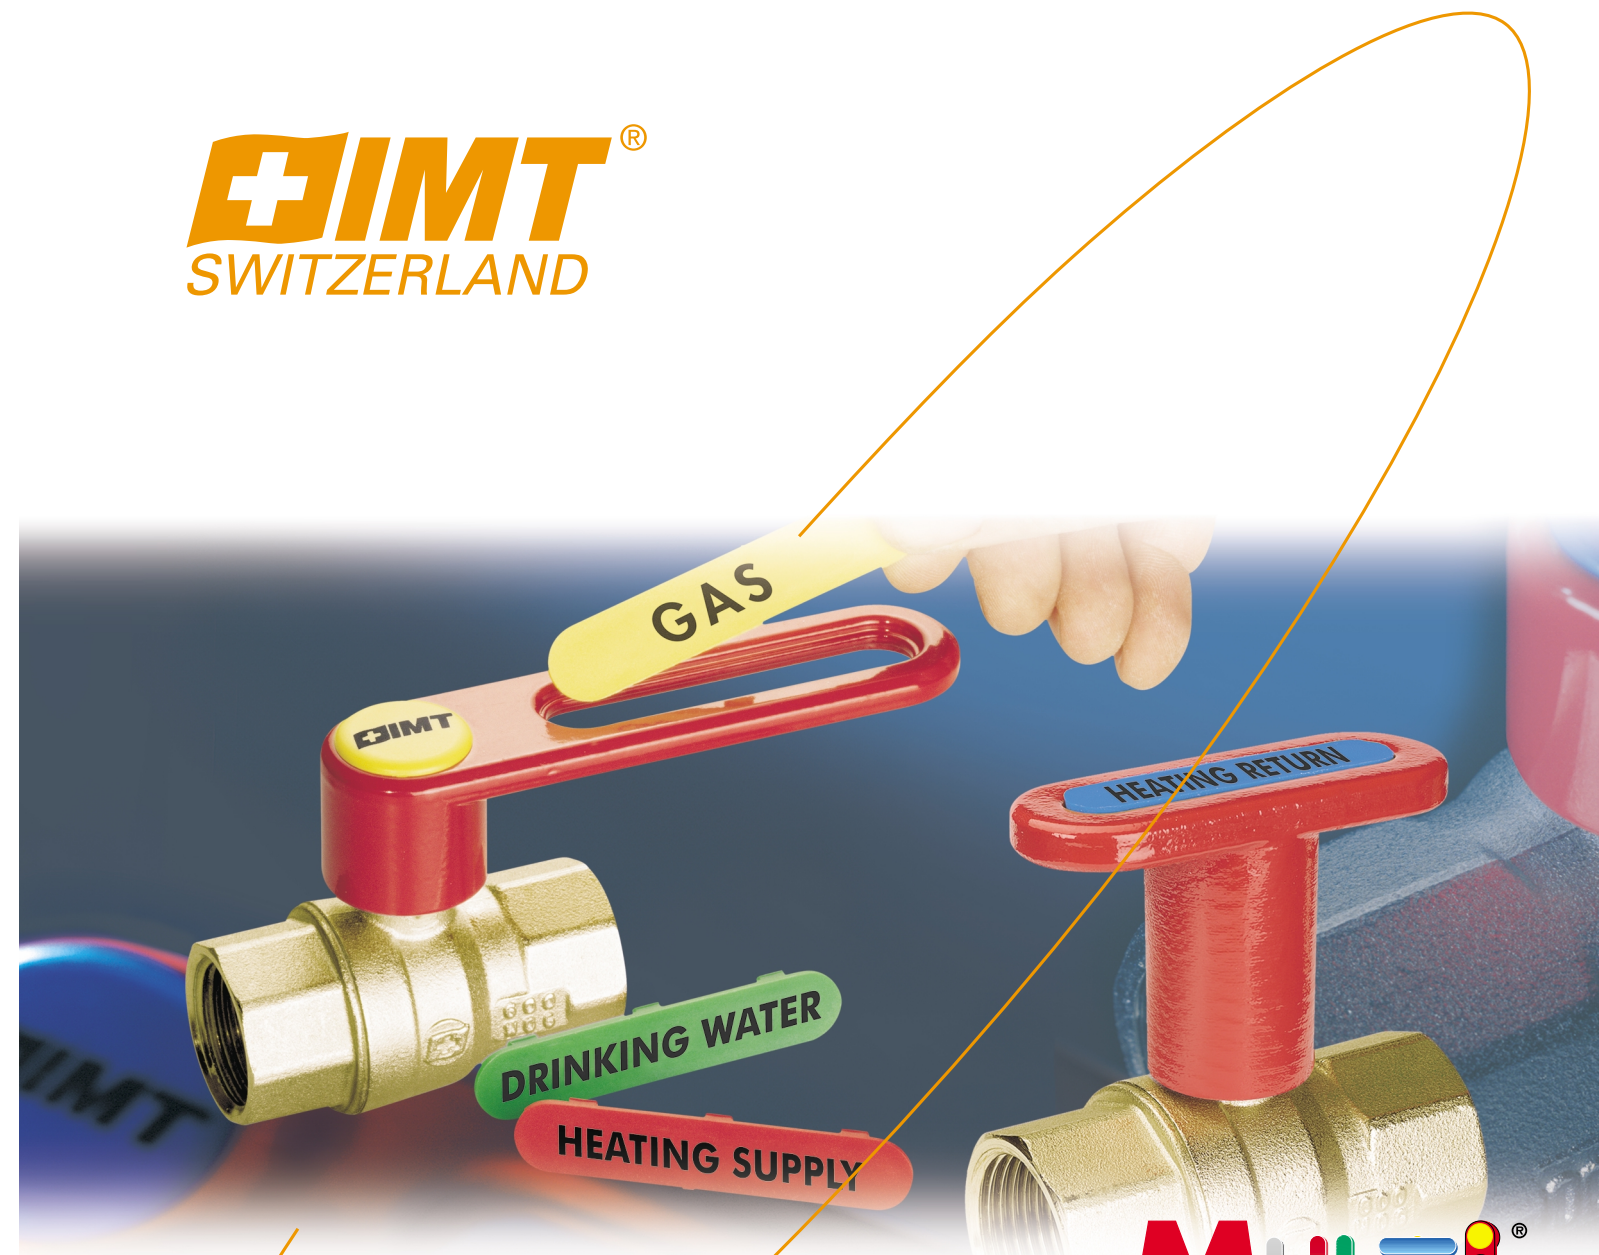

The high level of quality ...

... from IMT is what makes this exemplary diversity of universal ball valves possible. The body of heavy forged brass, the chrome-plated ball (without reduction of cross section), the blowout-proof stem and the extremely long-lasting special Viton "O" rings are the quality features of universal ball valves: you know it's "made by IMT".

We share our customers' conviction: you can only make high-quality installations with top-class materials – this guarantees both your safety and the satisfaction of your customers.

Customer Service in a Case

Customer-friendly ...

... because the MULTILOGO pipe labeling system offers your customers a clear and well-organized system complete with a feeling of security. MULTILOGO makes your pipe system transparent and easy to understand, even for the layperson. This allows your customers to find the right shut-off valve immediately in an emergency and they will be thankful for many years.

Simple ...

... because the MULTILOGO pipe labeling strips and covering caps fit all IMT design handles. And with the handy MULTILOGO case, you always have everything you need in five different colors for heating, water, gas and compressed air including a water-proof labeling pen. Pre-printed standard strips with conventional labels are also available. Just pick a color, label it, clip it in, and you're finished. That's how easy it is.

It fulfills the regulations ...

... don't forget that a series of regulations, such as DIN 1988, DIN 2403 or the new ISO 14726, stipulate what pipe systems are to be labeled and how. Two of the most important features are clarity and permanency. With MULTILOGO, you're always on the safe side. We guarantee it!

Diversity ...

... because the interchangeable handle types can be combined with almost any type of IMT ball valves. Whether a T-shaped handle with the high or flat design or as a lever that can be mounted on the right or left, what's important is the installation environment. There's the right MULTILOGO labeling for every situation and you're always equipped for every conceivable construction site situation.

MULTILOGO Design Handles

MULTILOGO design handles are available in a variety of sizes as a lever, T-handle or wing handle and fit all conventional IMT ball valves. You can clearly identify every IMT ball valve with the MULTILOGO covering caps and labeling strips.
