Prevex® P-loc™

**A classic European
water trap.**

PREVEX
ALL ABOUT WATER TRAPS

Prevex® P-loc™

A perfect match for any kitchen sink.

P-loc is a versatile water trap with a design that follows traditional European models, where all parts of the water trap are clearly visible. P-loc's horizontal and vertical telescopic features allow for maximum adjustability in different configurations. This water trap is easy to mount, either on a wall or on the floor.

Telescopic arms

P-loc will fit any kitchen sink, thanks to its adjustable arms. This adjustability allows for great flexibility during installation.

Low transport costs

P-loc fits into small bags, which means it saves transport and warehouse costs for our clients.

Classical design

P-loc is designed in accordance with traditional European water trap models. The overflow covers can be designed to any specific requirement.

Durable

All Prevex water traps are manufactured from high-quality materials, which minimises the risk for leakage and water damages.

All our products meet the European EN-274 standard.  **Developed and produced in Finland.**

Technical specifications

Remote

The waste kits can easily be replaced with remote-controlled waste kits.

Telescopic adjustments

A perfect fit is easy to achieve with pipes that telescopically adjust both vertically and horizontally.

Flexible or rigid overflow

The flexible, white overflow is standard for P-loc and is easy to adjust to different kitchen sinks.

The smooth-surfaced pipe of the rigid overflow improves flow and prevents residue buildup.

MagneticCover-compatible

The strainers are compatible with the elegant Prevex MagneticCover.

Available with both 40-mm and 50-mm outlet pipes.

P-loc can be both floor- and wall-mounted.

Light gold

Gold

Copper

Gun metal

Black matte

Coloured accessories for trendy kitchens

Our kits include a strainer, a remote knob as well as an overflow cover in a uniform colour.
