Hydronic Kits

Hydronic kit

The VKB 2.0, HPT and HP 2.0 units are meant to optimize the performance of heating and cooling installations and to reduce the installation time.

The units have an integrated system, which contains all the needed components for an efficient functioning of the hydraulic circuit (or for the distribution of chilled water).

They are designed, pre-assembled and every unit is tested in our factory. In this way we guarantee quality in our products and a fast and simple installation. The kits are available with a broad range of Pump/ Tank combinations which can be used with any kind of cooling device or heat pump.

The units are made of materials and finished in a certain way which makes it possible to install outdoor. They can be customized according to the client's specific requirements.

Advantages

- ✓ Easy installation
- ✓ All units are tested
- ✔ Pre-assembled system
- ✔ Fast installation
- ✓ Excellent dimensions
- ✓ Low energy consumption

HPT Unit with tank, pump and accessories

VKB 2.0 Unit with tank and accessories

HP 2.0 Unit with pump and accessories

The units are in accordance with the directives emitted by the European Union and labelled with the CE mark.

In accordance with the ErP directive Efficient usage of energy

Pre-assembled accessories and tested for a fast and secure installation

Tank units for chilled water Hydronic systems: HPT

Carbon steel tank and tubes insulated with anticondensate elastomer

Available versions: the broad range of pump-tank combinations makes it possible to meet all requirements. Numerous versions are available: with a single or a double pump and with tanks with a capacity of 100, 200, 300, 500, 750, 1000, 1500 and 2500 litres.

Accessories: For the accessories list see pag. 104

Start-up: the first start-up is recommended. See page 386

The HPT units are hydraulic units with buffer tanks designed to reduce the production time of conditioning and cooling systems. They can be equipped with all different kinds of water coolers.

The HPT units are made of:

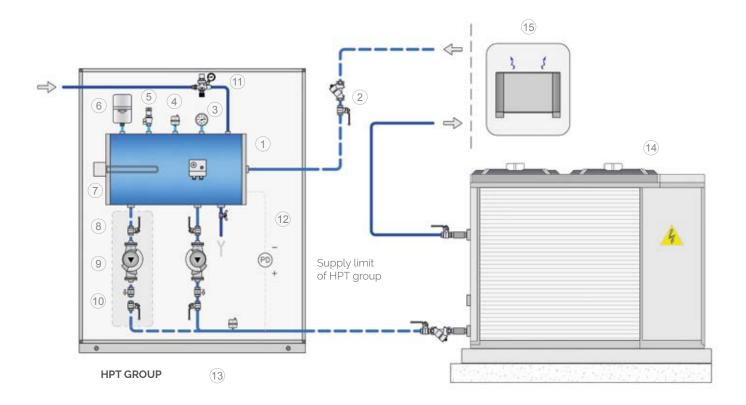

- carbon steel tank and tubes insulated with anti-condensate elastomer
- Centrifugal single or double pump with a shut-off valve
- Switchboard with possibility to alternate the pumps with every start-up (2 pump version), to start-up the backup pump in case of breakdown (2 pump version), magnetothermic protection, cleaned contact to signalise the distance between the pumps, protection category IP55
- Expansion vessel
- Safety valve
- Deaerator
- Manometer
- Fill-up/drain valve
- Base and self-supporting panels made of galvanized and coated steel sheets, suitable for outdoor installations.

HPT hydronic systems Layout 1 - STANDARD

Layout 1 Features: Hydronic kit, chiller and system connected in series, hence the water flow is constant throughout the plant.

NOTE: All HPT Fiorini standard kit kits are Layout 1

Legend

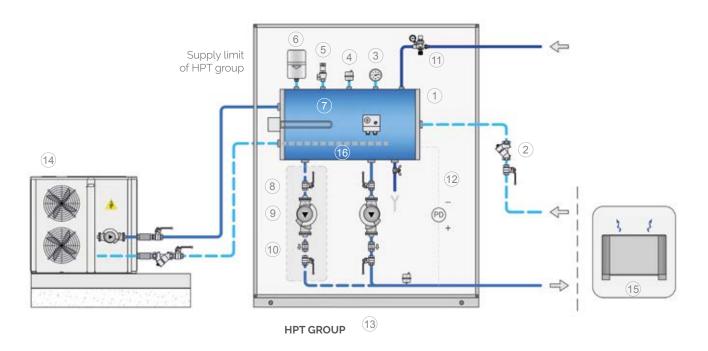

- 1. Storage tank
- 2. Y filter. Optional, supplied non-assembled
- 3. Manometer
- 4. Deaerator
- 5. Safety valve
- 6. Expansion vessel
- 7. Kit with electric anti-freeze resistance and anti-freeze thermostat (optional)
- 8. On-off valve
- 9. Circulator
- 10. Check valve (only version with 2 pumps)
- 11. Automatic filling unit
- 12. Differential pressure switch (optional)
- 13. Self-supporting sturdy structure for outside placement
- 14. Chiller
- 15. Device

HPT hydronic system Layout 2 - SPECIAL VERSION

Layout 2 Features: Hydronic Kit and Chiller create the primary circuit, Hydronic Kit and Plant create the secondary circuit. Hence, the two circuits have independent flow rates.

NOTE: Pump unit supplied only on one of the two circuits.

Legend

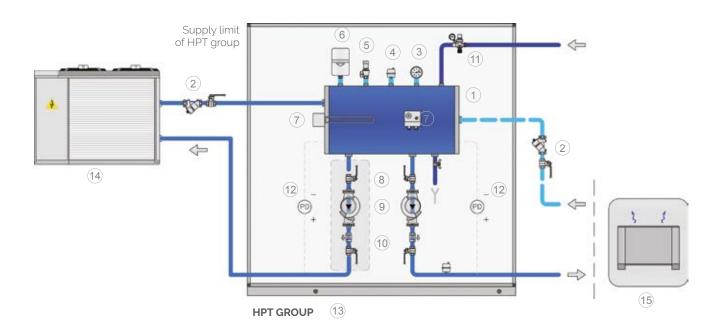

- 1. Storage tank
- 2. Y filter. Optional, supplied non-assembled
- 3. Manometer
- 4. Deaerator
- 5. Safety valve
- 6. Expansion vessel
- 7. Kit with electric anti-freeze resistance and anti-freeze thermostat (optional)
- 8. On-off valve
- 9. Circulator
- 10. Check valve (only version with 2 pumps)
- 11. Automatic filling unit
- 12. Differential pressure switch (optional)
- 13. Self-supporting sturdy structure for outdoor placement
- 14. Chiller
- 15. Device

HPT hydronic system Layout 3 - SPECIAL VERSION

Layout 3 features: Hydronic Kit and Chiller create the primary circuit, Hydronic Kit and the system create the independent secondary circuit. Then the two circuits have independent flow rates.

NOTE: Pump assembly supplied on both circuits.

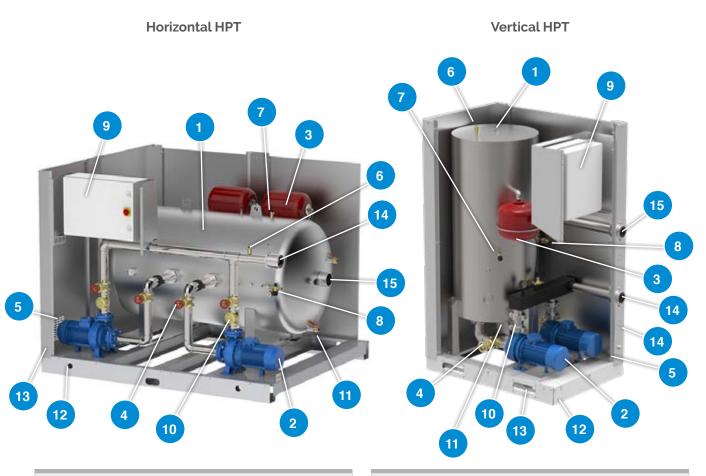

Legend

- 1. Storage tank
- 2. Y filter. Optional, supplied non-assembled
- 3. Manometer
- 4. Deaerator
- 5. Safety valve
- 6. Expansion vessel
- 7. Kit with electric anti-freeze resistance and anti-freeze thermostat (optional)
- 8. On-off valve
- 9. Circulator
- 10. Check valve (only version with 2 pumps)
- 11. Automatic filling unit
- 12. Differential pressure switch (optional)
- 13. Self-supporting sturdy structure for outside placement
- 14. Chiller
- 15. Device

HPT hydronic systems capacity of the expansion vessel

Max water content in the device and the dimensions of the expansion vessel

On the first chart, the max water content in the hydraulic device which is compatible with the capacity of the expansion vessel (supplied with every HPT model) and with the start-up value of the safety valve (3 bar for all models) is indicated. If the actual water volume in the device, the storage tank included, is more than the operative conditions on the chart, more expansion vessels need to be installed.

Tav. 1

| | Hydraulic height H Preload of the expansion vessel | m bar | 15 1,80 | 10 1,50 |
|----------|---|----------|------------|------------|
| | Max water capacity in the circuit in litres (1) | | 708 | 885 |
| HPT 100 | Max water capacity in the circuit in litres (2) | | 453 | 567 |
| | Max water capacity in the circuit in litres (1) | | 708 | 885 |
| HPT 200 | Max water capacity in the circuit in litres (2) | | 453 | 567 |
| | Max water capacity in the circuit in litres (1) | | 984 | 1230 |
| HPT 300 | Max water capacity in the circuit in litres (2) | | 630 | 788 |
| | Max water capacity in the circuit in litres (1) | | 984 | 1230 |
| HPT 500 | Max water capacity in the circuit in litres (2) | | 630 | 788 |
| | Max water capacity in the circuit in litres (1) | | 984 | 1230 |
| HPT 750 | Max water capacity in the circuit in litres (2) | | 630 | 788 |
| | Max water capacity in the circuit in litres (1) | | 984 | 1230 |
| HPT 1000 | Max water capacity in the circuit in litres (2) | | 630 | 788 |
| | Max water capacity in the circuit in litres (1) | | 1964 | 2461 |
| HPT 1500 | Max water capacity in the circuit in litres (2) | | 1261 | 1576 |
| | Max water capacity in the circuit in litres (1) | | 2953 | 3691 |
| HPT 2500 | Max water capacity in the circuit in litres (2) | | 1891 | 2363 |

Operative conditions

 (1) cooling Min temp of fluid = 4°C Max temp of fluid = 40°C
 (2) heating (heat pump)

Min temp of fluid = 4°C Max temp of fluid = 50°C

Tav. 2

| | Water ter | nperature | | |
|----------------------|-----------|-----------|-------------------|-----------|
| Water/glycol mix. | max. | min. | Correction factor | Reference |
| 10% | 40 | -2 | 0. 507 | (1) |
| 10% | 5 | -2 | O. 686 | (2) |
| 20% | 40 | -4 | O. 434 | (1) |
| 20% | 50 | -4 | 0.604 | (2) |
| 30% | 40 | -6 | 0. 393 | (1) |
| 30% | 50 | -6 | O. 555 | (2) |

HPT hydronic systems Preload of the expansion vessel

The expansion vessel, of all models, is preloaded with a standard value of 1.5 bar. However, the value has to be adjusted to the height of the device H.

The formula used to calculate the preload value of the expansion vessel is: P = (H / 10.2)+0.3

Legend

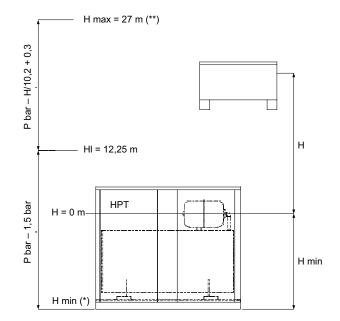

H: height of the device in meters

P: preload of the expansion vessel in bar

If the result of the preload value is less than the standard value, no steps should be taken. This means that for every installation with a height below 12.25 m, the preload of the expansion vessel should be 1.5 bar. In these cases the operator should only check the pressure value without carrying out any intervention.

Example:

You take a height H of 15.3 m. The preload value is: P = (15,3/10,2)+0,3= 1,8 bar

H height of the device

Hmax: max height of the device

H1: height when the preload of the expansion vessel is the same as the standard value

* verify that the lowest point of the device can support the device's pressure

** verify that the highest point of the device is not higher than H max = 27 m

HPT hydronic system user's conditions

Normal user conditions

The HPT Hydronic Group is designed to be placed in air conditioning systems, usually coupled with a chiller or a heat pump.

The groups are designed to work with water or ethylene glycol and water mixtures up to a maximum of 30%. For operation with percentages of higher glycols or with different fluids, you must consult our technical support.

The minimum operating temperature of the fluid is 0°C, of course with a mixture of water and glycol, while the maximum is 60°C. Special versions for operation with lower or higher temperature fluids are available on request.

The outdoor air temperature range is -20 ° C + 40 ° C. Again, special versions are available for operation outside the standard range.

The maximum working pressure of the group is 3 bars. Versions with maximum operating pressure are available on request. Also versions for open vessel operation (atmospheric pressure) can be made on request.

Hydronic systems HPT accessories

Programmable timer for alternating pumps

In the dual pump configuration, the timer can be used to handle alternating pump operation at specified time intervals. Without the timer, the alternating pump operation occurs at each startup of the group. Default alternation every 48 hours programmable.

* **WARNING:** If the system operates 24 hours a day, 7 days a week, the pump alternation is not guaranteed by the standard group. In this case, we recommend the use of this accessory.

| Code | Description | Price |
|------------|------------------|-------|
| 838081104X | TIMER OPTION 48H | |

Differential pressure switch

Security device that allows you to verify that there is flow inside the system. The device generates an alarm signal but does not automatically stop the machine.

| Code | Description | Price |
|------------|------------------------------|-------|
| 838081000X | DIFFERENTIAL PRESSURE SWITCH | |

Anti-vibrating feet

Set of anti-vibrating feet to be placed on the machine's support points. The feet are supplied disassembled.

| Code | Description | Price |
|------------|----------------------------------|-------|
| 838080917X | ANTIVIBRATION FOR HPT 300/500 | |
| 838080936X | ANTIVIBRATION FOR HPT 750/1000 | |
| 838080938X | ANTIVIBRATION FOR HPT 1500/2500L | |

Inverter (special version)

Each pump can be operated by an inverter. The units equipped with inverters have a pressure sensor, 0-10 bar, which communicates with the inverter with 4-20 mA signal. All adjustment parameters are pre-loaded during the test run at the company. The user must choose only the desired set point pressure value.

see page: 133

Antifreeze electric resistance kit (special version)

The kit, mounted inside the tank, consists of an electrical resistance of 1300 W for dimensions up to 1000 L and two 1300 W electric resistors for larger dimensions. The kit also includes a bi-thermostatic antifreeze adjustment (-35 / + 35 ° C) and is supplied assembled, wired and tested. **see page: 133**

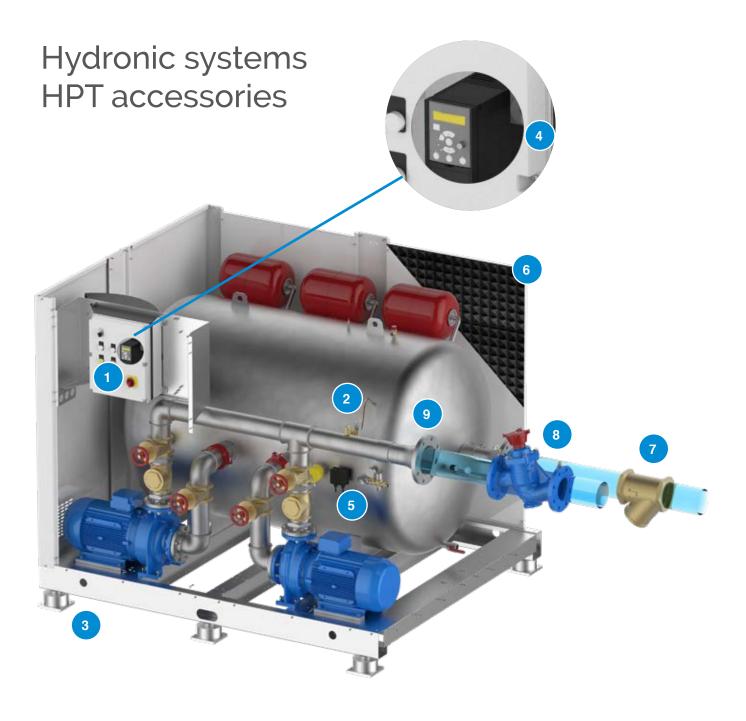

6

5

Soundproof coating (special version)

The soundproofing is available, which attenuates the sound level of the machine significantly. **see page: 133**

7

9

Filter (special version)

Mesh filter, with 1000 micron holes, can be placed outside the unit to protect the pumps from any impurities in the equipment. see page: 133

8 Balancing valves (special version)

Valve can be connected externally to balance the flow within the circuit. **see page: 133**

Wooden box packing (special version)

Extra protective packing suitable for risky and long-distance transport. **see page: 133**

Tailored connections

From Threaded to Flanged/Grooved Standard **see page: 132** Special version for larger size, flanged grooved in various materials **see page: 133**

HP 2.0 Hydronic system

Piping insulated with anti-condensate elastomer

The HP 2.0 units are hydraulic stations meant to reduce the set-up time of the conditioning and cooling devices. They can be linked to any kind of water cooler.

The HP unit has:

- piping insulated with anti-condensate elastomere
- Single or double centrifugal pump with shutoff valve
- Power switchboard with device to alternate pumps with every start-up (version with two pumps), start-up of the back-up pump in case of breakdown (version with two pumps), magnetothermal protection, contacts to command the pumps from a distance, protection category IP55.
- Safety valve
- Deaerator
- Manometer
- Fill-up/drain valve
- Base and self-supporting panels made of galvanized and coated steel sheets, suitable for outdoor installations
- Panels that can be quickly and easily removed
- Easy and quick access to the switchboard

The broad range of combinations offers a solution for every single type of installation.

Expansion vessel available on request.

Accessories: See pag. 116 for the list of available accessories

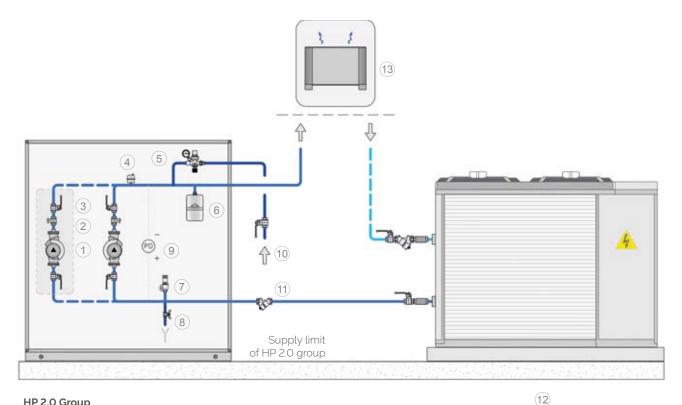

Start-up: the first start-up is recommended. See page 386

HP 2.0 hydronic systems: hydraulic chart

Features: Hydronic kit, chiller and plant connected in series, hence the water flow is constant throughout the plant.

NOTE: All HPT Fiorini standard kit kits are designed according to the following chart.

HP 2.0 Group

Legend

- 1. Circulator
- 2. Shut-off valve (only version with 2 pumps)
- 3. On-off valve
- 4. Deaerator
- 5. Automatic filling unit

HP 2.0 hydronic systems: Capacity of the circuit and the expansion vessel

Max water content in the device and dimensions of the expansion vessel

On chart 1 the max water volume in the hydraulic installation is indicated, compatible with the capacity of the expansion vessel and applicable to al HP 2.0 models. The safety valve also has a start-up value (3 bar for all models). If the effective water content in the device, as well as in the storage tank, exceeds the operating conditions in the chart, another/second expansion vessel should be installed to take the added water volume.

Tav. 1

| Pump model | Hydraulic height | m | 15 | 10 |
|------------------|---------------------------------|-----|------|------|
| | Preload of the expansion vessel | bar | 1,80 | 1,50 |
| PT2 PT3 P1 P2 P3 | Circuit's max water content (1) | l | 492 | 615 |

Hydronic systems HP 2.0 preload of the expansion vessel

The expansion vessel, of all models, is preloaded with a standard value of 1.5 bar.

The value has to be adapted though to the height H of the device.

The formula used to calculate the preload value of the expansion vessel is: P = (H / 10.2)+0.3

Legend

H: height of the device in meters

P: preload of the expansion vessel in bar

Should the preload value be less than the standard value, no intervention has to be carried out. This means that an installation with a height of less than 12.25 meters has a preload of 1.5 bar. In this case the operator should only check the pressure value and not intervene.

Example

We take a height H of 15.3. The preload value is: P = (15,3/10,2)+0,3= 1,8 bar

H: height of the device

Hmax: max height of the device

H1: height when the preload of the expansion vessel is the same as the standard value

* verify that the lowest point of the device can support the pressure

** verify that the highest point of the device does not exceed the max height H max=27 m.

HP 2.0 hydronic system user's conditions

Normal user conditions

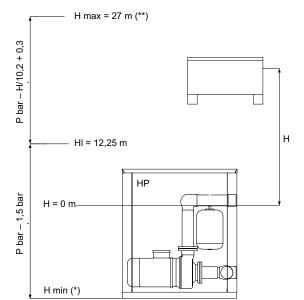

The HP 2.0 hydronic group is designed to fit into air conditioning systems, normally coupled with a chiller or a heat pump.

The groups are designed to work with water or ethylene glycol and water mixtures up to a maximum of 30%. For operation with percentages of higher glycols or with different fluids, you must consult our technical service.

The minimum operating temperature of the fluid is 0°C, of course with a mixture of water and glycol, while the maximum is 60°C. Special executions for operation with lower or higher temperature fluids are available on request.

The outdoor air temperature range is -20°C + 40°C. Again, special versions are available for operation outside the standard range.

The maximum working pressure of the group is 3 bars. Versions with maximum operating pressure are available on request. Also versions for open vessel operation (atmospheric pressure) can be made on request.

Hydronic systems HP 2.0: accessories

Programmable timer for alternating pumps

In the dual pump configuration, the timer can be used to handle alternating pump operation at specified time intervals. Without the timer, the alternating pump operation occurs at each startup of the group. Default alternation every 48 hours programmable.

* **WARNING:** If the system operates 24 hours a day, 7 days a week, the pump alternation is not guaranteed by the standard group. In this case, we recommend the use of this accessory.

| Code Description | | Price |

7 Inverter (special version) Each pump can be operated by an inverter. The units equipped with inverters have a pressure sensor, 0-10 bar, which communicates with the inverter with 4-20 mA signal. All adjustment parameters are pre-loaded during the test run at the company. The user must choose only the desired set point pressure value.

see page: 133

8 Antifreeze electric resistance kit (special version) The kit provides protection against freezing by means of a heating cable wound around piping. The kit also includes a bi-thermostatic antifreeze adjustment (-35 / + 35 ° C) and is supplied assembled, wired and tested. see page: 133

Soundproof coating (special version) The soundproofing is available, which attenuates the sound level of the machine significantly. see page: 133

10 Fil

11

Filter (special version)

Mesh filter, with 1000 micron holes, can be placed outside the unit to protect the pumps from any impurities in the equipment. **see page: 133**

Balancing valves (special version)

Valve can be connected externally to balance the flow within the circuit. **see page: 133**

Wooden box packing (special version)

Extra protective packing suitable for risky and long-distance transport. **see page: 133**

Hydronic systems VKB 2.0

The VKB 2.0 units are buffer storage tanks with accessories (without circulation pump) designed in order to significantly reduce the set-up time for the conditioning and cooling devices.

With all hydraulic components which are indispensable for the correct functioning of the hydraulic circuit for the distribution of chilled water. The components can be coupled with all kind of water coolers. The units consist of an insulated buffer tank, an expansion vessel, a safety valve, a deaerator, a fill/drain valve and a manometer.

The VKB 2.0 units are enveloped in a supporting structure in a galvanized steel and powder coated panels and base. They are designed to guarantee an easy inspection and maintenance of the components. The tank, which is hydraulically inserted between the cooling station and the fan-coils, makes the water content in the entire installation increase, by increasing the pause between the shutdown of the compressor and the next start-up. In this way, the number of start-ups is significantly reduced, which improves the life span and performance of the compressor. The broad range of storage tanks makes it possible to meet every requirement. Every unit is assembled in our factory and tested to guarantee our trustworthiness.

Available versions

VKB 2.0 is available in the following sizes: 250, 500, 1000 and 1500 litres.

Accessories

See pag. 116 for the list of available accessories

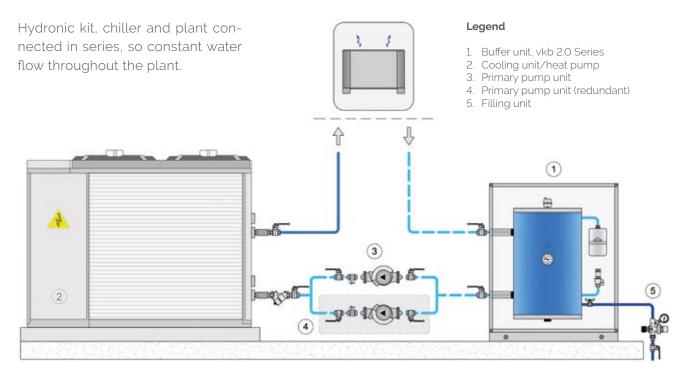

Tank insulated with anti-condensate elastomer

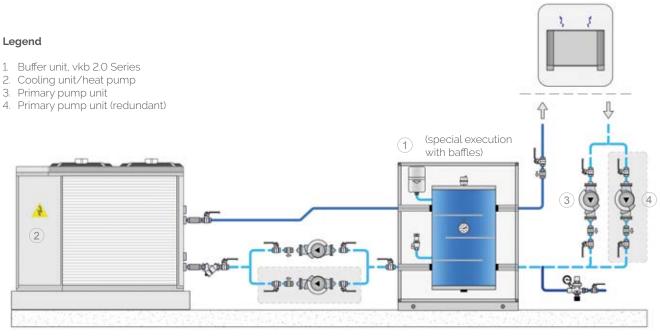

Hydronic systems VKB 2.0 Layout 1 STANDARD

Hydronic systems VKB 2.0 Layout 2 SPECIAL VERSION

Hydronic Kit and Chiller create the primary circuit, Hydronic Kit and Plant create the secondary circuit. Hence, the two circuits have independent flow rates. The VKB shown below is a special execution with baffles.

Hydronic systems VKB 2.0

VKB 2.0 Description of the main components

• Storage tank

The storage tank is made of varnished carbon steel plates and is insulated with closed cell elastomer . This type of insulation, guarantees an excellent resistance to condensate formation.

• Fill up valve

This valve refills the hydraulic circuit in the demand peak phase as well as during normal functioning. • Safety valve

Calibrated at 6 bar and with canalised drain. It protects the unit from possible overpressure.

Automatic valve for air drain

Placed on the upper part of the unit, it drains air from the unit.

Drain valve

It drains air from the lowest point of the tank to make drainage possible.

Supporting structure

The base is made of thick steel plates varnished. The basement and panels are made in galvanized steel and powder coated which are resistant to atmospheric agents. All this makes it possible for the VKB 2.0 to be installed in non-technical spaces and in places exposed to atmospheric agents.

• Expansion vessel

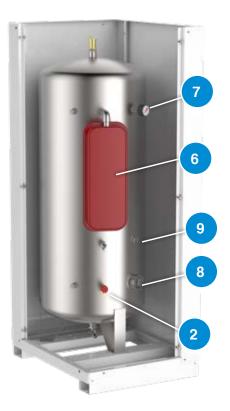

Supplied with a membrane, preloaded nitrogen and with dimensions that can absorb varying volumes of liquid derived from the various temperatures.

Manometer

This device is placed on the tank and indicates the internal pressure.

Hydronic systems VKB 2.0 preload of the expansion vessel

The expansion vessel, of all models, is preloaded with a standard value of 1.5 bar.

The value has to be adapted though to the height H of the device.

The formula used to calculate the preload value of the expansion vessel is:

P = (H / 10.2) + 0.3

Legend

H: height of the device in meters

P: preload of the expansion vessel in bar

Should the preload value be less than the standard value, no intervention has to be carried out. This means

that an installation with a height of less than 12.25 meters has a preload of 1.5 bar. In this case the operator

should only check the pressure value and not intervene.

Example

We take a height H of 15.3. The preload value is: P = (15,3/10,2)+0,3= 1,8 bar

H: height of the device

Hmax: max height of the device

H1: height when the preload of the expansion vessel is the same as the standard value * verify that the lowest point of the device can support the pressure

** verify that the highest point of the device does not exceed the max height H max=27 m.

Normal user's conditions

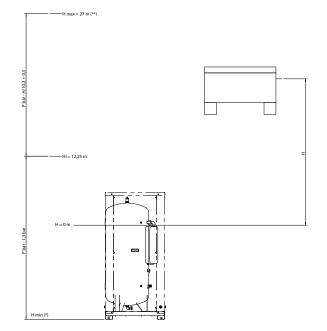

The VKB 2.0 hydronic group is designed to be incorporated into conditioning systems, normally coupled with a chiller or a heat pump.

The units are designed to work with water or ethylene glycol and water mixtures up to a maximum of 50%. For operation with percentages of higher glycols or with different fluids, you must consult our technical service.

The minimum operating temperature of the fluid is O ° C, of course with a mixture of water and glycol, while the maximum is 60 ° C. Special executions for operation with lower or higher temperature fluids are available on request.

The outdoor air temperature range is -20 ° C + 40 ° C. Again, special versions are available for operation outside the standard range.

The maximum working pressure of the group is 6 bars. Versions with maximum operating pressure are available on request. Also versions for open vessel operation (atmospheric pressure) can be made on request.
