

Fractal  
design Soo K. Chan

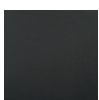

WINNER

GERMAN  
DESIGN  
AWARD  
SPECIAL  
2023

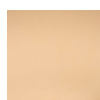

Fractal, design Soo K. Chan, is the new series offered in numerous finishes, equipped with the technological and functional pluses that are typical of CRISTINA Rubinetterie products. The name refers to the geometric figure of the prism. The body of the mixer is in fact characterised by several flat strips that create the faces, limited by parallel lines that create the edges. The series is valuable and sought-after both for its mechanical workmanship - the greatest difficulty lies in keeping the radiuses of the surface always equally sized and strictly geometrical - both for the considerable craftsmanship required in the smoothing, polishing and brushing phases. The Fractal series won the Archiproducts Design Awards 2022 and the German Design Award 2023, two prestigious recognitions of design and functionality.

### Bio

A graduate of Yale, Soo K. Chan is the founder and design director of SCDA Architects Pte Ltd, a multidisciplinary studio based in Singapore, Shanghai and New York.

In his over 70 projects worldwide, he has always taken a holistic approach, integrating architecture, interiors, landscape and product design. Winner of many international awards - three American Institute of Architects (AIA) International and AIA NY Awards for Architecture, three Royal Institute of British Architects (RIBA) International prizes, President's Design Award and nine Chicago Athenaeum awards, to name but a few - Soo K. Chan is one of the founders of Constructions Declare, Design Partner of the environmental non-profit organisation Parley for the Oceans and Professor of Architecture at the National University of Singapore. As an industrial designer he designs for the Italian companies Poliform and CRISTINA Rubinetterie.

"Fractal geometry is often found in spontaneous, imperceptible forms that are always before our eyes, such as tree leaves, clouds or mountains."

Soo K. Chan
