PUMPS, MOTORS, BOOSTER SETS, INVERTERS, CONTROLLERS

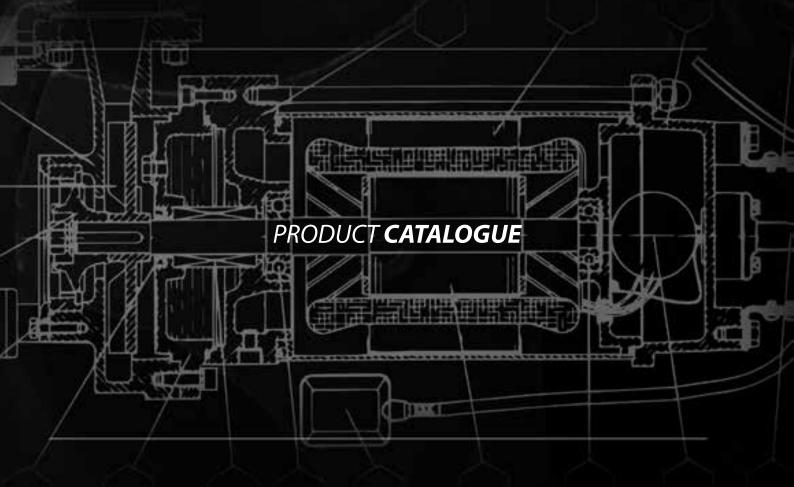

DAMBAT IS A DYNAMICALLY DEVELOPING POLISH MANUFACTURER OF WATER PUMPS AND FITTINGS SOLD UNDER IBO BRAND.

The company started its activities in 1999 and from the very beginning it based its development on understanding clients' needs providing them with high quality products. With experience and knowledge of qualified personnel and regular product development, Dambat became a significant manufacturer of water pumps in the European market.

In order to continue constant development, we cooperate with world-renowned manufacturers of water devices and equipment, while making our offer more attractive. In 2015 and 2016 we commenced cooperation with Italian factories, which resulted in introduction of a new IBO Italy brand into the market.

In cooperation with our Italian partners, we sell top quality tanks, pumps and deep well motors under this brand. Benefiting from the latest technology and high-quality materials, IBO and IBO ITALY products ensure long-lasting, safe and faultless operation. The range of products with such features and individual approach enabled us to acquire distributors of our devices in the majority of European countries and beyond.

With the experience gained over the years in line with knowledge and understanding of the importance of reliability, Dambat delivers top quality products to all customers who decide to choose our offer.

Single-stage self-priming centrifugal surface pump equipped with the Venturi tube $\,$ system for increased suction capacity, designed for pumping of clean cold water from own intakes and for increasing pressure. Sections of pump body and shaft that come in contact with water are made of stainless steel (INOX design). The pump has a power cable with a plug. The pump motor is provided with thermal protection.

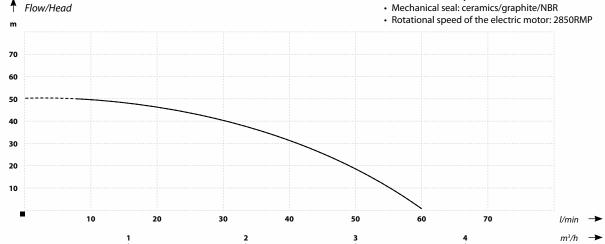

Supply of water to houses, holiday houses, allotments and gardens. When combined with pressure tanks, the pumps can be used in single- and multifamily residential housing, in industrial applications and for irrigation purposes.

OPERATING CONDITIONS:

- Maximum liquid temperature 40°C
- Maximum ambient temperature 40°C
- Class B Insulation
- Operating mode continuous
- · Protection IP44

MATERIALS:

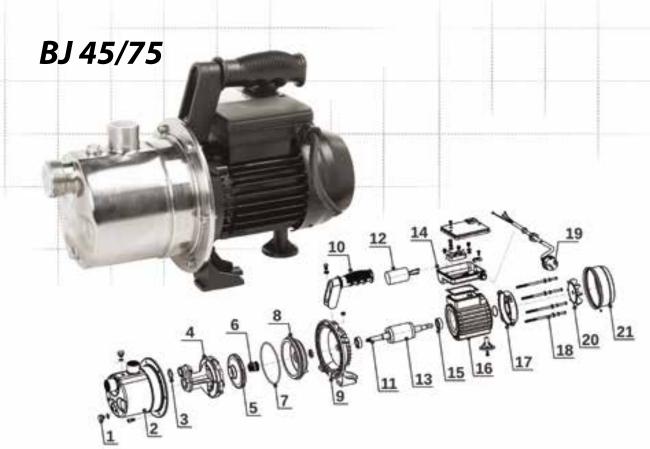

- Housing: stainless steel AISI 304
- Shaft and rotor: stainless steel AISI 304
- Impeller: Noryl (stainless steel AISI 304)
- Frame: cast iron
- Pump end plate: stainless steel AISI 304
- Venturi tube: Noryl
- Mechanical seal: ceramics/graphite/NBR

The pump for pumping of clean cold water from own intakes and for increasing pressure. BJ 45/75 is a single-stage self-priming centrifugal surface pump equipped with the Venturi tube system for increased suction capacity. Sections of pump body

and shaft coming in contact with water are made of stainless steel (INOX design). The pump is manufactured to the highest quality standards in terms of the design and materials used. The pump has a power cable with a plug, and the pump motor is provided with thermal protection.

APPLICATION:

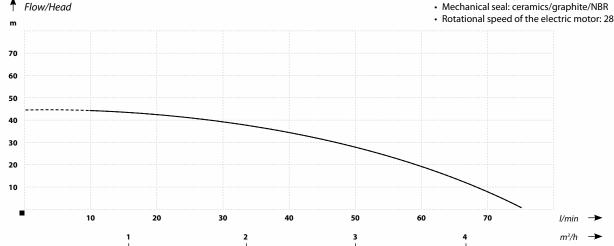

Supply of water to houses, holiday houses, allotments and gardens. When combined with pressure tanks, the pumps can be used for single- and multi-family residential housing and in industrial applications.

OPERATING CONDITIONS:

- Maximum liquid temperature 40°C Maximum ambient temperature 40°C
- Class B Insulation
- Operating mode continuous
- Protection IP44

MATERIALS:

- · Housing: stainless steel AISI 304
- Shaft and rotor: stainless steel AISI 304
- Impeller: Noryl
- Pump end plate / Frame:
- stainless steel AISI 304/cast iron/aluminium Venturi tube: Noryl
- Rotational speed of the electric motor: 2850RMP

Single-stage self-priming peripheral surface pumps for pumping of clean cold water from own intakes and for increasing pressure. Pump impellers are made of brass. The pump body is made of durable cast iron with the built-in non-return valve. The pump motor is provided with thermal protection. The pumps have a power cable with a plug.

APPLICATION:

Supply of water to holiday houses, allotments and gardens. When combined with pressure tanks, the pumps can be used for single- and multi-family residential housing, in industrial applications and for irrigation purposes.

Single-stage self-priming centrifugal pumps equipped with the Venturi tube system for increased suction capacity, designed for pumping of clean cold water from own intakes and for increasing pressure. The JSW pumps are very efficient and additionally provide exceptionally good water suction capacity. JSW 200 pumps have a brass impeller. All JSW pumps are equipped with thermal protection mounted in the motor winding.

APPLICATION:

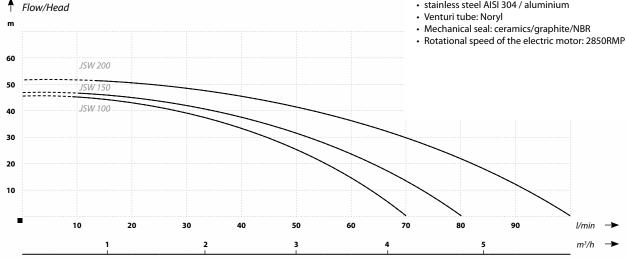

• Supply of water to houses and agricultural holdings, as well as for irrigation of gardens. When combined with pressure tanks, the pumps can be used for single- and multi-family residential housing, in industrial applications and for irrigation purposes.

OPERATING CONDITIONS:

- Maximum liquid temperature 40°C
- Maximum ambient temperature 40°C Class B Insulation

The pump for pumping of clean cold water from own intakes and for increasing pressure. DP355 is a single-stage self-priming centrifugal surface pump equipped with the Venturi tube system immersed directly into a well for increased suction capacity. DP355 is one of the few pumps that has a suction capacity of 23 m when using the Venturi tube system immersed into the well. Due to the high suction capacity, the pump can replace a submersible pump. The pump body is made of durable cast iron, and the pump motor is provided with thermal protection. The pump has a power cable with a plug.

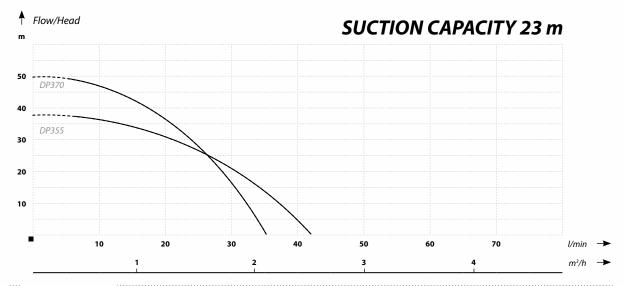

APPLICATION:

Supply of water to houses, holiday houses, allotments and gardens. When combined with pressure tanks, they can be used for single- and multi-family residential buildings, in industrial applications and for irrigation purposes.

- Maximum ambient temperature 40°C
- Class B Insulation

SURFACE PUMPS

Group of multi-stage self-priming centrifugal pumps designed for pumping of clean cold water from own intakes and for increasing pressure. The pumps are equipped with the Venturi tube system for increased suction capacity. MH pumps are available in two variants: with stainless steel impellers (INOX design) or with noryl impellers. All pumps have a stainless steel body. Due to their high performance, efficiency and parameters, the pumps are often used to supply water to houses and agricultural holdings. Due to low-noise operation, the pumps can be installed inside the houses. The pumps are equipped with thermal protection mounted in the motor winding. All MH pumps are available in 230 V \sim / 50 Hz version. MH 1300 / INOX and MH 2200 INOX pumps are additionally available in the 400 V \sim 3/50 Hz version. MH pumps are also available with booster sets and with PC intelligent pump controllers (PC15, PC16, PC10P, PC59).

Single-stage non-self-priming centrifugal pumps designed for pumping non-aggressive liquids with non-abrasive and non-absorbent solids content of 0.27 kg/m 3 . The maximum temperature of the pumped liquid is up to 60°C. The pump motor is provided with thermal protection mounted in the motor winding. Hydraulic parts that come in contact with water are made entirely of stainless steel.

APPLICATION:

Agriculture: irrigation, drainage, water supply, pumping liquid fertilizers (not corrosive to AISI 304 steel). Industrial applications: supply of water, pumping liquids that are not corrosive to AISI 304 steel and non-explosive liquids, jest washing.

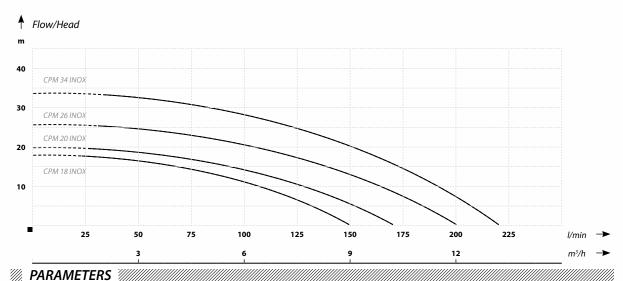

Air conditioning: heating, cooling. Household applications: supply of water, increasing pressure. The pumps is designed for continuous operation.

OPERATING CONDITIONS

- Maximum liquid temperature 60°C
- Maximum ambient temperature 50°C
- Class B Insulation
- Operating mode continuous
- Protection IP44

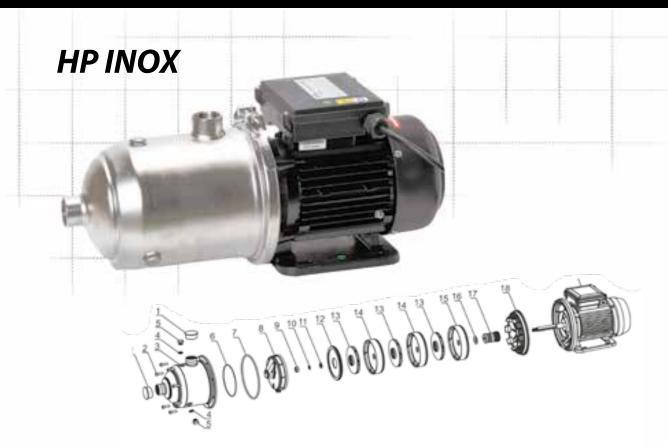

MATERIALS:

- Housing: stainless steel AISI 304
- Shaft and rotor: stainless steel AISI 304
- Impeller: stainless steel AISI 304
- Pump end plate: stainless steel AISI 304
- Frame: Aluminium
- Mechanical seal: carbon/ceramics/NBR
- · Rotational speed of the electric motor: 2850RMP

The pump for pumping of clean cold water from own intakes and for increasing pressure. HP Series are multi-stage self-priming centrifugal surface pumps equipped with the Venturi tube system for increased suction capacity. Sections of pump body and shaft that come in contact with water are made of stainless steel (INOX). The pump is manufactured to the highest quality standards in terms of the design and materials used. The pump has a power cable with a plug, and the pump motor is provided with thermal protection.

APPLICATION:

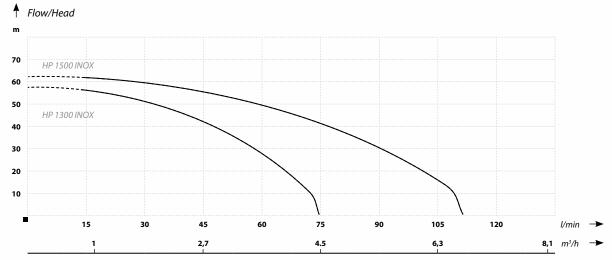

Supply of water to houses, gardens, industrial washing facilities, air conditioning and cooling systems. When combined with pressure tanks, the pumps can be used for single- and multi-family residential housing and in industrial applications.

OPERATING CONDITIONS:

- Maximum liquid temperature 70°C
- Maximum ambient temperature 50°C
- Class F Insulation
- Operating mode continuous
- Protection IP55

MATERIALS:

- Housing: stainless steel AISI 304
- Shaft and rotor: stainless steel AISI 304
- Impeller: Noryl
- · Venturi tube: Noryl
- Pump end plate: stainless steel AISI 304
- Mechanical seal: ceramics/graphite/NBR

The pump used for clean, cold water from own intakes and for pressure boosting. The HP pumps are multistage, self-sucking surface pumps with increased suction capacity provided by a Venturi tube. The pump shaft is made of stainless steel (INOX). The pump is top quality in terms of workmanship and materials. It features a power cable with a plug, and the motor has integrated thermal protection.

APPLICATION:

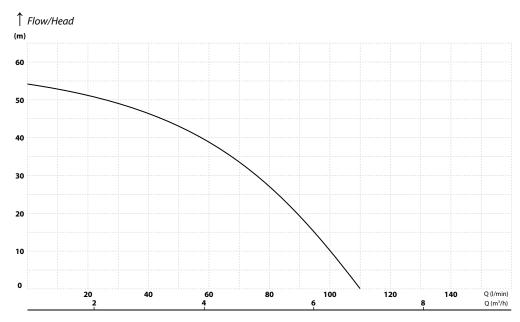

Water supply to homes and gardens. In combination with membrane tanks can be used for single- and multi-family houses and in industry.

OPERATING CONDITIONS:

- Maximum liquid temperature 50°C
- Maximum ambient temperature 50°C
- · Insulation class F
- Operation mode continuous
- Degree of protection IP55

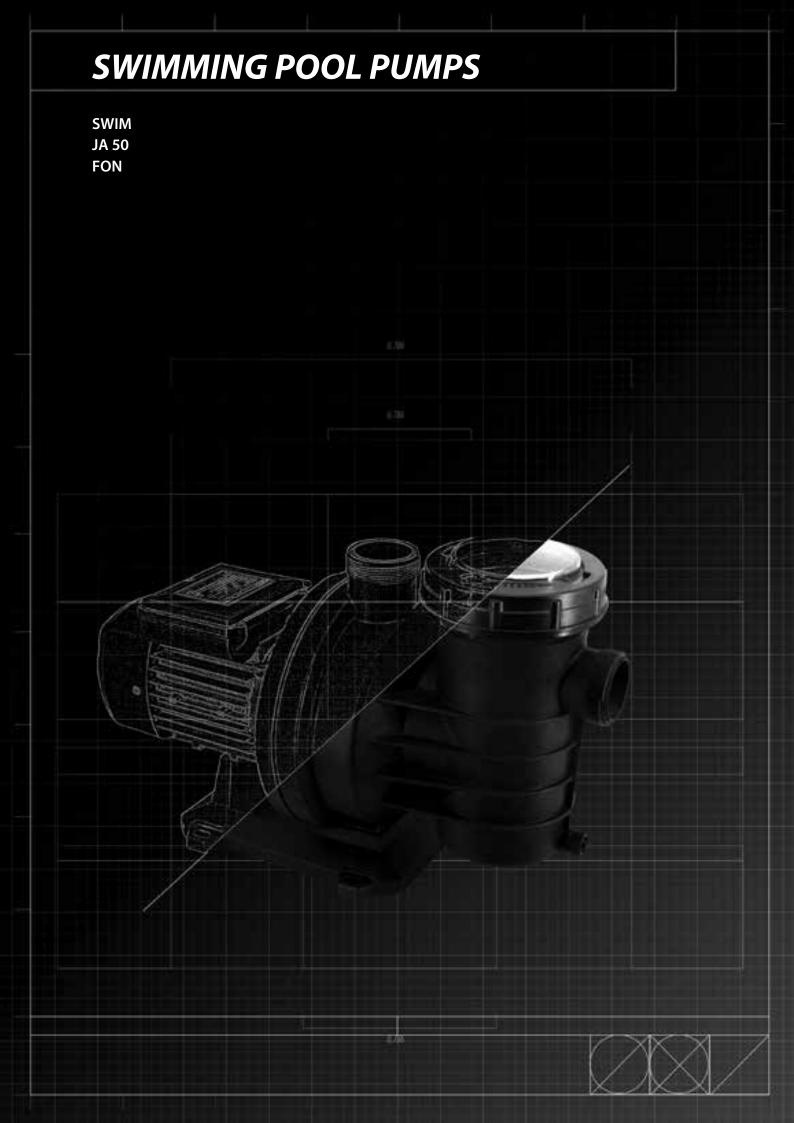

MATERIALS:

- Housing: AISI 304
- Shaft and rotor: AISI 304
- Impeller: Noryl
- Diffuser: Noryl
- Partition: AISI 304
- Mechanical gland: ceramic/ graphite/NBR
- Motor speed: 2850RMP

Self-priming swimming pool pump with pre-filter.

Designed for maximum efficiency of filtration and circulation of water with chlorine content. It can operate with sea water. The pump is made of plastic materials, with a catcher for leaves and larger impurities, including fibrous ones. Available with \emptyset 50 mm or Ø 48.5 mm inlets/outlets.

MOTOR

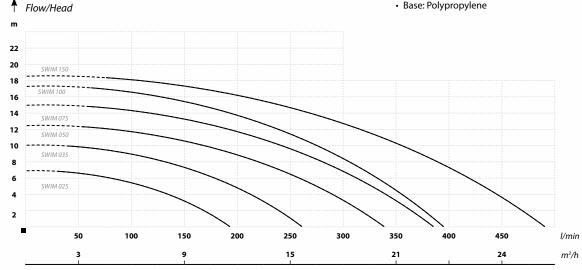

- Asynchronous squirrel-cage with external ventilation
- Supply voltage 220-240 V/50 Hz.
- IP55 Ingress Protection
- Insulation Class F
- Single-phase motor with built-in capacitor and thermal protection
- Self-lubricating ball bearings
- · Rotational speed 2850 rpm
- Designed for continuous operation

OPERATING CONDITIONS:

- Water temperature: 5-50°C
- Ambient temperature: max. 50°C
- Max. working pressure: 0.3 MPa

MATERIALS:

- Pump housing: ABS
- · Pre-filter: ABS
- Inlet/outlet: ABS/PVC
- · Access plate: Polyethylene HD
- Impeller: Glass fibre reinforced LEXAN (resistant to abrasion by sand)
- · Venturi tube: Glass fibre reinforced LEXAN (resistant to abrasion by sand)
- · Mechanical seal: SiC/C
- Shaft: Stainless steel SUS 316
- Base: Polypropylene

The booster set s a proven solution for automatic supply of water to households. Each of the IBO surface pumps can be combined in any booster set. The size of the tank is selected according to individual needs and requirements of clients.

In addition to the classic sets of pump + tank, it is possible to configure the pump with intelligent controllers such as: PC (PC-10P/ PC-13 / PC-15/PC-16/PC-59), SK(SK15) and IVR-02 frequency converters. The controllers are equipped with an additional dry-running protection. The set's operation is fully automatic - it starts the pump when the water is turned on and stops it when the water is turned off. TANKS THAT CAN BE SELECTED: IBO POZIOM / IPO PION POZIOM / IBO INOX / IBO ITALY / IBO ITALY FIX.

The set includes:

- pump,
- pressure tank,
- · pressure switch,
- pressure gauge,
- five-way delivery outlet
- anti-vibration hose with elbow

INVERTERS

AUTOIBO WZI-AUTO 900 HOME 1 **IQ-AUTO 750 MAGNET-AUTO 750** MCI 4 AUTO **INVERTER SYSTEM – IVR-02 INVERTER SYSTEM – IV-03 INVERTER SYSTEM – IVR-05 INVERTER SYSTEM – IVR-10 S/T INVERTER SYSTEM – IVR-20/30/40 INVERTER SYSTEM – IVR-09T INVERTER SYSTEM – IVR-09T MULTI SET IVR-09**

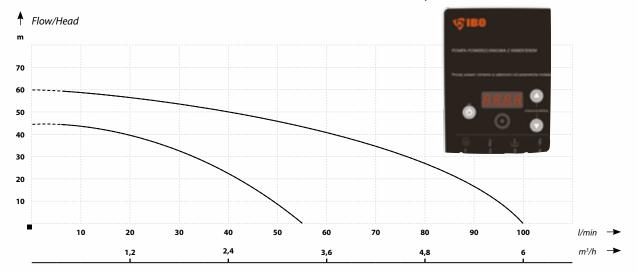

The AUTOIBO series pumps are equipped with a high performance frequency converter. Pumps equipped with frequency converters create seamless system to keep water supply system pressure constant regardless of the water demand. The frequency converter integrated into the pump will allow to reduce electricity consumption. Compared to the traditional water supply method, the constant pressure water supply system with frequency converter saves up to 60% of energy. The pump motor speed is adjusted to the various operating conditions of the water supply system.

A pump with an inverter is an easy-to-use control and protection device that maintains a constant, set water pressure by changing the rotational speed of the pump motor.

ADVANTAGES:

- 1. Low-noise operation: can be installed in the house.
- 2. Simple operation: easy to use, all functions can be terminated by pressing a button.
- 3. Long-term reliability of the co-operating pumps: the average torque and shaft wear are reduced due to decreasing the average rotational speed, which increases the pump operational lifetime. Due to the built-in soft start and stop function, the device allows to eliminate the water hammer.
- 4. Fully protected: the system incorporates the most versatile overcurrent, overvoltage, undervoltage, short-circuit, impeller blocking and dry-running protection technology without the need to install probes/sensors in the well.

WZI-AUTO 900

WZI-AUTO 900 is a compact device designed to provide households with clean water from their own water intakes (wells) or to increase pressure from the water supply network. The pumps are equipped with a frequency inverter that guarantees constant pressure in all water taps, soft starts of the motor and lower current consumption compared to classical pressure boosting plants. The pumps with an integrated frequency inverter are state-of-the-art and energy efficient devices characterised by their silent operation, ease of installation and use, integrated protection against dry running, water hammer, pressure decrease or increase, or motor overload.

A very important characteristic of the IBO pumps with an integrated frequency inverter is their ease of use. Starting up and configuring the pump does not require the presence of an automation specialist - the user only has to set the operating pressure of the device using two buttons (+ and -).

Despite utilising a small 900W motor, the WZI-AUTO 900 pump achieves very good parameters: flow rate of 75I/min and head of 43m. These parameters are sufficient to satisfy the needs of a single-family home or commercial premises. Additionally, the device is classified as S1, which means it has been designed for continuous duty.

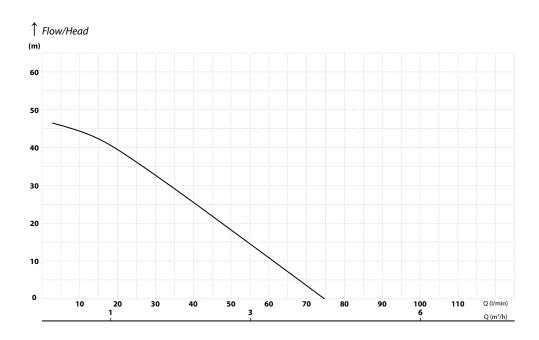

ADVANTAGES:

- High efficiency despite utilising a small 900W motor
- Silent operation allowing the device to be installed even in usable rooms
- Ease of use and convenient operation
- Lower motor and hydraulic part wear thanks to an integrated "motor soft start"
- Constant pressure guarantee
- Protective functions: against dry running, overload, overvoltage/undervoltage, motor overload, water hammer

MATERIALS:

- Housing: plastic
- Impeller: Brass
- Diffuser: Cast iron
- Shaft and rotor: stainless steel AISI 304
- Inverter display: LED
- Mechanical sealing: Ceramics/graphite
- Motor rotational speed: 0-4000RPM
- Frequency range: 30-50Hz

MCI 4 AUTO

MCI series pumps are characterized by high quality of workmanship, additionally the AUTO version is equipped with a high-efficiency frequency converter. Pumps equipped with frequency converters form a well-tuned system that allows the system pressure to be kept at a constant level, regardless of the water demand. A frequency converter integrated with the pump will reduce electricity consumption. Compared to the traditional water supply, the constant pressure water supply system with frequency converter saves energy up to 60%. The speed of the pump motor is adapted to the different operating conditions of the installation. In order to maintain smooth operation, the pump is equipped with a diaphragm vessel.

The pump equipped with an inverter is an easy-to-use control and safety device, maintaining a constant set water pressure. Support the change of the pump motor rotational speed.

ADVANTAGES:

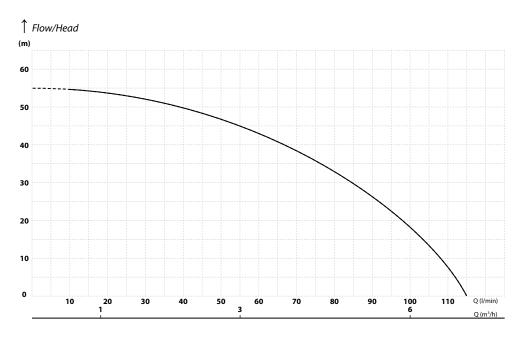

- 1. Quiet operation: can be installed at home
- 2. Simple operation: easy operation, all functions can be finished by pressing a button.
- 3. Reliability for many years of associated pumps: the average torque and the shaft abrasion are reduced due to the decrease in the average speed, which ensures a longer service life of the pump. Due to the built-in soft start and stop function, the device allows to eliminate the water hammer.
- 4. Comprehensive protection: the system has the most comprehensive protection technology of overcurrent, overvoltage, undervoltage, short circuit, locked rotors, the ability to protect the pump against dry running without the need to install probes / sensors in the well.
- 5. The kit is equipped with a check valve
- Economical: by using an inverter, the pump consumes much less electricity compared to sets without an inverter

WORKING CONDITIONS:

- Liquid temperature: ≤70 ° C
- Ambient temperature: ≤50 ° C
- Maximum pressure in the installation: up to 10 bar
- Degree of protection: IP55
- · Insulation class: F

MATERIALS:

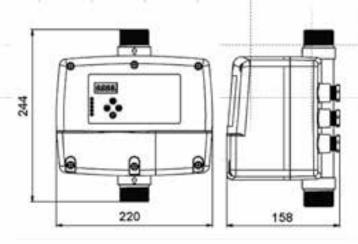

- Body AISI 304 stainless steel.
- Shaft AISI 304 stainless steel.
- Mechanical stuffing box SIC / SIC / EPDM
- Connectors: stainless AISI 304
- Impellers, diffusers, diffuser covers AISI 304 stainless steel.
- Inter-wall: AISI 304 stainless steel
- · Base: Steel
- Motor: closed-frame asynchronous cage motor, aluminum housing, external ventilation.

IVR-02M Intelligent Pump Controller is an easy-to-use control and protection device for direct connection of 0.75 KW to 1.5 KW (from 1 HP to 2 HP) single-phase submersible pumps, surface pumps, deep well pumps, etc., maintaining a constant, set water pressure by changing the rotational speed of the pump motor.

The IVR-02M model provides many operating modes by adapting to various electrical systems.

SYSTEM ADVANTAGES

- Energy efficiency: Compared to the traditional water supply method, the constant pressure water supply system with frequency converter saves up to 30%-60% of energy.
- Fully protected: the system incorporates the most versatile overcurrent, overvoltage, undervoltage, short-circuit, impeller blocking and dry-running protection technology without the need to install probes/sensors in the well.
- Simple operation: easy to use, all functions can be terminated by pressing a button, without the need to hire programming specialists.
- Long-term reliability of the co-operating pumps: the average torque and shaft wear are reduced due to decreasing

the average rotational speed, which increases the pump operational lifetime. Due to the built-in soft start and stop function, the device allows to eliminate the water hammer (the water hammer is a sudden pressure increase that occurs at rapid stopping or starting of liquid flow.) The ability to control the operation of two pumps supplying the system.

APPLICATION:

IVR-02M can be used in all applications where maintaining a constant water pressure in the system and control and protection of a pump or a set of two pumps is required.

 $IVR-02M\ controls\ automatic\ switching\ on\ and\ off,\ and\ adapts\ the\ motor\ speed\ to\ the\ requirements\ of\ the\ water\ supply\ system.$

TYPICAL APPLICATION:

- houses
- apartments
- holiday houses
- agricultural holdings
- supply of water from the well
- ${\color{blue} \bullet}$ irrigation of growing houses, gardens, agricultural land
- collecting and using rainwater

INVERTER SYSTEM - IVR-03

CAN BE ARRANGED IN PUMP GROUPS

IVR-03 Intelligent Pump Controller is an easy-to-use control and protection device for direct connection of deep-well pumps, surface pumps, submersible pumps, etc., maintaining a constant, preset water pressure by varying the pump motor speed. The IVR-03 inverter utilises SPWM (sinusoidal pulse width modulation) technology and high efficiency space vector technology, with V/F VVVF (variable speed, variable frequency) control.

With real-time pressure analysis, the inverter adjusts the pump speed to the current system demand. Variable speed pump stabilizes pressure and saves water and electricity.

Important features that distinguish IVR-03 from popular on/off control devices:

- 1. Energy efficiency. The water supply system with frequency converter saves 30%-60% of energy compared to a traditional set-up.
- 2. Simple operation: easy to use, all functions can be terminated by pressing a button without the need to hire programming specialists.
- 3. Long-term reliability of the co-operating pumps: the average torque and shaft wear are reduced due to decreasing the average rotational speed, which increases the pump operational lifetime. Due to the built-in soft start and stop function, the device allows to eliminate the water hammer (the water hammer means a sudden pressure increase that occurs at rapid stopping or starting of liquid flow.)
- 4. Fully protected: the system incorporates the most versatile overcurrent, overvoltage, undervoltage, short-circuit, impeller blocking and dry-running protection technology without the need to install probes/sensors in the well.
- 5. Ability to control the operation of several pumps supplying the system.

APPLICATION

IVR-03 can be used to increase the water pressure in various installations such as residential, commercial, industrial, water treatment plants, agriculture, etc.

- Ease of installation and operation. No need to hire a qualified service technician to connect the unit
- Advanced technology, PID algorithm control, technology addressed for pump drive control
- Reliable and fail-safe. The unit has various built-in protections. Dry-running protection, short-circuit protection, overload protection, under-voltage protection, over-voltage protection, rotor lockout protection, etc.
- Energy-saving. The controller effectively saves between 30% and 60% of electrical energy.
- Complies with CE product safety requirements, and meets environmental protection requirements
- The device improves the quality of life

INVERTER SYSTEM – IVR-05

Our Intelligent Pump Controller, IVR-05 model, is an easy-touse control and protection device for direct connection of deep-well pumps, surface pumps, submersible pumps, etc., maintaining a constant, set water pressure by changing the rotational speed of the pump motor. The IVR-05 inverter utilises the SPWM technology (sinusoidal pulse width modulation) and a highly-efficient spatial vector, using V/F VVVF control (variable velocity, variable frequency).

APPLICATION:

- The IVR-05 can be used to increase water pressure in various systems such as residential houses, commercial premises, industry, water treatment stations, agriculture etc
- Ease of installation and use. No need to have the device connected by a qualified service technician
- Advanced technology, PID algorithm control, technology dedicated to pump drive control
- Trustworthy and reliable. The device has various integrated protection features. Protection against dry running, short-circuit, overload, undervoltage, overvoltage, impeller blocking etc.
- Energy efficient. The controller effectively saves 20% 60% of electric energy.
- It meets the requirements regarding CE product safety and fulfils the environmental protection requirements.

Thanks to real-time pressure analysis, the inverter adjusts the rotational speed of a pump to system's demand at a given time. Variable rotational speed of the pump stabilises pressure, thus reducing water and current consumption.

Its important feature that distinguishes the controller from popular on/off control devices is:

- Energy efficiency. Compared to the traditional water supply method, the constant pressure water supply system with frequency converter saves 30%-60% of energy.
- Simple operation: easy to use, all functions can be terminated by pressing a button without the need to hire programming specialists.
- Long-term reliability of the co-operating pumps: the average torque and shaft wear are reduced due to decreasing the average rotational speed, which increases the pump operational lifetime. Due to the built-in soft start and stop function, the device allows to eliminate the water hammer (the water hammer is a sudden pressure increase that occurs at rapid stopping or starting of liquid flow.)
- Fully protected: the system incorporates the most versatile overcurrent, overvoltage, undervoltage, short-circuit, impeller blocking and dryrunning protection technology without the need to install probes/sensors in the well.
- Possibility of controlling several pumps supplying the system.

INVERTER SYSTEM - IVR -10 S/T

IVR-10 S/T Intelligent Pump Controller is an easy-to-use control and protection device for direct connection of 1.1 KW do 2.2 KW (from 1.5 HP to 2.5 HP) single-phase

(IVR-10S) or 3-phase (IVR-10T) deep well pumps, surface pumps, submersible pumps, etc., maintaining a constant, set water pressure by changing the rotational speed of the pump motor. The IVR-10 S/T model provides many operating modes by adapting to various electrical systems.

Its important feature that distinguishes it from popular on/off control devices is:

- Energy efficiency. Compared to the traditional water supply method, the constant pressure water supply system with frequency converter saves up to 30%-60% of energy.
- 2. Simple operation: easy to use, all functions can be terminated by pressing a button, without the need to hire programming specialists.
- 3. Long-term reliability of the co-operating pumps: the average torque and shaft wear are reduced due to decreasing the average rotational speed, which increases the pump operational lifetime. Due to the built-in soft start and stop function, the device allows to eliminate the water hammer (the water hammer is a sudden pressure increase that occurs at rapid stopping or starting of liquid flow.)
- Fully protected: the system incorporates the most versatile overcurrent, overvoltage, undervoltage, short-circuit, impeller blocking and dry-running protection technology without the need to install probes/sensors in the well.
- 5. The controllers can be combined into pump groups of up to 6 pumps. The group is controlled by one main controller selected by the user while other controllers adjust the operation to the system requirements. The set is very easily programmable and does not require the assistance of the programmer.

APPLICATION:

IVR-10S/T can be used in all applications where maintaining a constant water pressure in the system, as well as control and protection of a single pump that controls automatic switching on and off by various electrical systems is required.

TYPICAL APPLICATION:

- houses / apartments / holiday houses,
- · agricultural holdings,
- supply of water from the well,
- irrigation of growing houses, gardens, agricultural land,
- · collecting and using rainwater,
- · industrial equipment.

| IVR-10T | 3/4 kW | | | 10A | (Permissible range 320-450V) | | | | |
| | 5,5/7,5 kW | | | 18A | | | | | |

INVERTER SYSTEM – IVR-09T

200

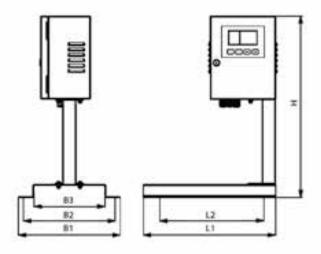

IVR-09T Intelligent Pump Controller is an easy-to-use control and protection device for direct connection of 0.75 KW to 7.5 KW (from 1 HP to 10 HP) 3-phase deep well pumps, surface pumps, submersible pumps, etc., maintaining a constant, set water pressure by changing the rotational speed of the pump motor. The IVR-09T model provides many operating modes by adapting to various electrical systems. The IVR-09 series controllers can be used in pump groups of up to 6 pumps. Its important feature that distinguishes it from popular on/off control devices is:

- 1. Energy efficiency. Compared to the traditional water supply method, the constant pressure water supply system with frequency converter saves up to 30%-60% of energy.
- Simple operation: easy to use, all functions can be terminated by pressing a button, without the need to hire programming specialists.
- 3. Long-term reliability of the co-operating pumps: the average torque and shaft wear are reduced due to decreasing the average rotational speed, which increases the pump operational lifetime. Due to the built-in soft start and stop function, the device allows to eliminate the water hammer. (the water hammer is a sudden pressure increase that occurs at rapid stopping or starting of liquid flow.)
- 4. Fully protected: the system incorporates the most versatile overcurrent, overvoltage, undervoltage, short-circuit, impeller blocking and dry-running protection technology without the need to install probes/sensors in the well.
- 5. The controllers can be combined into pump groups of up to 6 pumps. The group is controlled by one main controller selected by the user while other controllers adjust the operation to the system requirements. The set is very easily programmable and does not require the assistance of the programmer.

APPLICATION:

IVR-09t can be used in all applications where maintaining a constant water pressure in the system and control and protection of a pump or a set of two pumps is required. Typical application:

- · houses / apartments / holiday houses
- · agricultural holdings
- supply of water from the well
- irrigation of growing houses, gardens, agricultural land
- collecting and using rainwater
- industrial equipment

MULTI SET IVR-02

The set is equipped with the IVR-02 (230V) frequency converter and the set of HP 1500 INOX or MH 1300 INOX pumps. Multi-Set is an easy-to-use device designed for pumping of clean water in order to increase pressure in water supply systems, maintaining a constant, set water pressure by changing the rotational speed of the pump motor, with additional control and protection features.

ADVANTAGES

- Energy efficiency: reduction of energy consumption by 30%–60%...
- Simple operation: all functions can be terminated by pressing a button.
- Reliability: the average torque and shaft wear are reduced due to decreasing the average rotational speed, which increases the pump operational lifetime.
- Due to the built-in soft start and stop function, the device allows to eliminate the water hammer.
- Fully protected: the system incorporates the overcurrent, overvoltage, undervoltage, short-circuit, impeller blocking and dry-running protection technology without the need to install probes/sensors in the well.
- The ability to control the operation of two pumps that supply the system.
- · Low-noise operation.

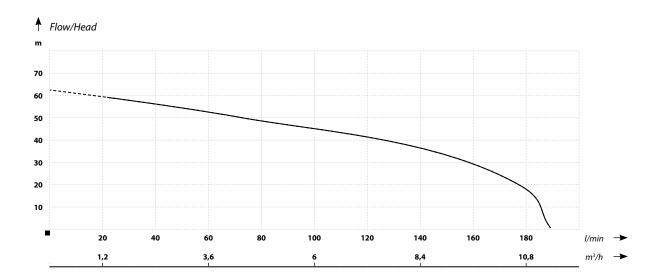

DESIGN

- Pumps x 2 HP 1500INOX (MH 13000INOX)
- Frequency converter IVR-02 (230V)
- IBO ITALY steel fittings
- · Check and water stop valves and fittings
- 8L IBO ITALY pressure vessel

APPLICATION

- Houses
- Apartments
- Holiday houses Agricultural holdings
- Supply of water from the well
- Irrigation of growing houses, gardens, agricultural land
- Collecting and using rainwater
- · Industrial equipment

MULTI SET IVR-09

The set is equipped with the IVR-09 (400V) / IVR-11(400V) frequency converter and the CV series pump/pumps. Multi-Set is an easy-to-use device designed for pumping of clean water in order to increase pressure in water supply systems, maintaining a constant, set water pressure by changing the rotational speed of the pump motor, with additional control and protection features.

ADVANTAGES:

- Energy efficiency: reduction of energy consumption by 30%-60%...
- Simple operation: all functions can be terminated by pressing a button.
- Reliability: the average torque and shaft wear are reduced due to decreasing the average rotational speed, which increases the pump operational lifetime. Due to the built-in soft start and stop function, the device allows to eliminate the water hammer.
- Fully protected: the system incorporates the overcurrent, overvoltage, undervoltage, short-circuit, impeller blocking and dry-running protection technology without the need to install probes/sensors in the well.
- The ability to control the operation of two pumps that supply the system.
- Low-noise operation.

DESIGN

- Pumps x 1/x 2/x 3/x 4/x 5/x 6 (CV3 Cv15)
- Frequency converter IVR-09 (400V) / IVR-11 (400V)
- IBO ITALY steel fittings

IP submersible plastic pumps designed for pumping clean and slightly contaminated water. The pumps have an outlet connection to which discharge hoses of different diameters can be connected depending on the user's requirements. Small size and light weight make the pumps exceptionally easy to operate and maintain. The pumps are equipped with float switches for automatic pump control. All pumps are supplied with thermal protection mounted in the motor winding.

IP INOX pumps have a similar design to IP pumps but their housing is made of high quality AISI 304 stainless steel.

Flow/Head

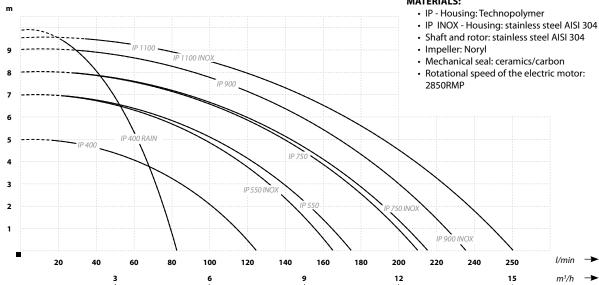

APPLICATION:

Draining flooded rooms, swimming pools, wells. The pumps can be used in waterholes and for obtaining water from intakes with water surface close to the ground level. The pumps can also be used for pumping rainwater.

OPERATING CONDITIONS:

- Maximum liquid temperature 35°C
- Maximum ambient temperature 40°C
- · Thermal protection: yes
- · Class B Insulation
- Operating mode continuous
- Protection IP68

IPE 400 - a submersible plastic pump designed for pumping clean and slightly contaminated water. The pumps have an outlet connection to which discharge hoses of different diameters can be connected. IPE400 is equipped with an electronic float/probe so the pump can be used in narrow wells. Small size and light weight make the pumps exceptionally easy to operate and maintain. All pumps are supplied with thermal protection mounted in the motor winding.

IPK 400 - the pump has a similar design to IPE pumps but the switch is not based on the probes but on the float operating in a vertical position inside a special channel. Like IPE pump, it can be placed in a narrow well, which may not be possible with IP pumps due to a float switch connected with a 30 cm cable, which increases the diameter of the pump.

APPLICATION:

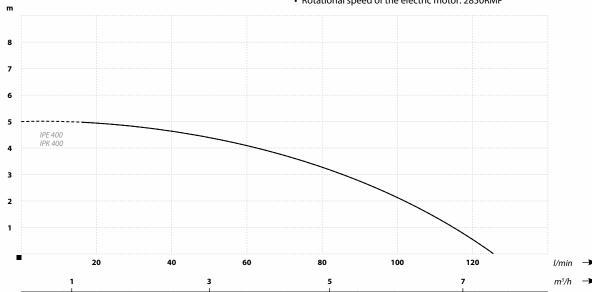

Draining flooded rooms, swimming pools, wells. The pumps can be used in waterholes and for obtaining water from intakes with water surface close to the ground level. The pumps can also be used for pumping rainwater.

OPERATING CONDITIONS:

- Maximum liquid temperature 35°C
- Maximum ambient temperature 40°C
- Thermal protection: yes
- · Class B Insulation
- Operating mode continuous
- Protection IP68

MATERIALS:

- IPE / IPK
- Housing: Technopolymer
- · Shaft and rotor: stainless steel AISI 304
- · Impeller: Noryl
- · Mechanical seal: ceramics/carbon
- Rotational speed of the electric motor: 2850RMP

IPC 550

Adapter 1

Adapter 2

Adaptor 2

A submersible plastic pump designed for pumping clean and slightly contaminated water. IPC 550 pump has a threaded outlet connection with a built-in non-return valve to which 3 different adapters can be attached in order to adapt the outlet diameter to individual requirements. The pumps have a cooling jacket so they do not have to be fully submerged. After removing the suction filter, water can be pumped-off down to 1 mm. Pumping can start at above 5 mm water level. Like IPE and IPK pumps, the IPC 550 pump is equipped with an integrated switch so it can be used in narrow wells. An additional advantage is the option to select the automatic or manual operating mode. Like IPE and IPK pumps, all pumps are supplied with thermal protection mounted in the motor winding.

Flow/Head

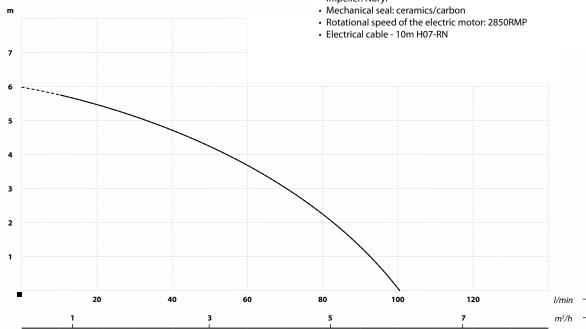

Draining flooded rooms, swimming pools, wells. The pumps can be used in waterholes and for obtaining water from intakes with water surface close to the ground level. The pumps can also be used for pumping rainwater.

Flowlow - 0,25INOX series are designed for clean and slightly polluted water, where water must be pumped out to a low level. The pumps are used for draining flooded rooms, swimming pools and sumps. They can also pump water from ponds, rivers, reservoirs and shallow wells.

CHARACTERISTICS:

- The pump can pump out water to a level of about 5cm
- Pole float switch
- Threaded discharge port for easy connection of discharge hose using a hose clamp or quick release coupling
- Top quality materials
- · Thermal protection built into the motor winding
- 24 months warranty
- · Warranty and post-warranty service
- Impeller: Plastic

105 mm diameter vibration pumps for irrigation. Due to their high efficiency, NEMO and VM60 submersible vibration pumps are perfect for irrigation with clean water. Despite the small size, the pump design based on solenoids allows creating high pressure required for irrigation. Due to their compact size and low weight, vibration pumps are very popular among allotment gardeners. Pumps are equipped with a 10 m power cable. Pump housing is made of aluminium. Compact-size Nemo and VM60 pumps can operate even in small wells. The minimum diameter of a drilled well in which the pump can be used is 120 mm.

APPLICATION:

Supply of water to small holiday houses and irrigation of gardens.

OPERATING CONDITIONS:

- Maximum liquid temperature 20°C
- Maximum ambient temperature 40°C
- Thermal protection: no
- Class B Insulation
- Operating mode in 30 min. cycles
- Protection IP68

MULTI IP 800 INOX

Pumps with the same hydraulic components as Multi IP 800 INOX but with the the built-in pump operation controller instead of the float switch. When the outlet valve is closed, the pump is stopped and goes into standby mode maintaining a constant pressure in the system. When the outlet valve is opened, the pump will automatically start.

APPLICATION:

Supplying houses with water from ring wells and for garden irrigation systems. The pumps can be used in waterholes and for obtaining water from intakes with water surface close to the ground level.

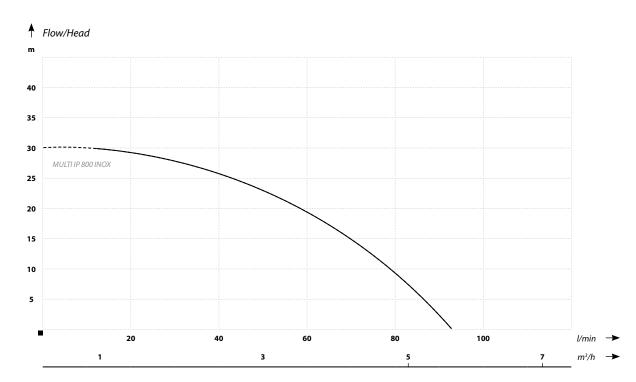

OPERATING CONDITIONS:

- Maximum liquid temperature 35°C
- Maximum ambient temperature 40°C
- Thermal protection: yes
- Class B Insulation
- · Operating mode continuous
- Protection IP68

MULTI IP 1200 AUTO MULTI IP 1200 AUTO RAIN

Multi IP 1200 AUTO

A range of high-pressure pumps for watering, featuring a built-in automation for controlling the pump operation. The pump starts when the valve or tap is opened, and when the valve or tap is closed the pump goes to the standby mode, keeping the constant pressure in the system. The pumps feature a cooling jacket so they do not have to be totally submersed. There is a filtering sieve in the base, so the pump can remove water to the level of 5 cm. All pumps have thermal protection in the motor winding.

Multi IP 1200 RAIN

A range of high-pressure pumps for watering, similar to Multi IP 1200 AUTO, but with a different water intake system. Instead of the filtering mesh, the pumps feature 1" suction port to which the hose with a check valve is connected. The advantage of this solution is the pump protection in case of settling of impurities on the tank bottom, because the pump does not suck water from the tank bottom but through a 1-m long hose. The RAIN pumps have thermal protection in the motor winding.

APPLICATION:

In rainwater tanks for watering gardens. Water supply to homes from wells and garden watering systems. The pumps can be used in ornamental ponds and for taking water from springs in which the water level is near the surface.

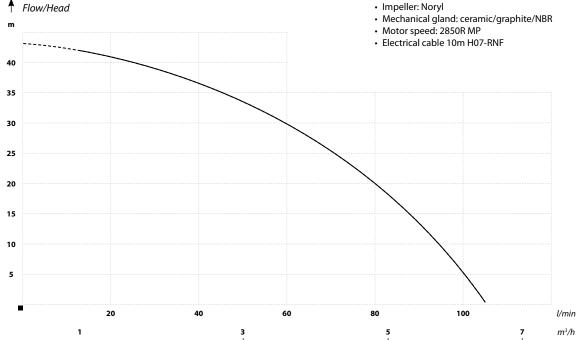

OPERATING CONDITIONS:

- Maximum liquid temperature 35°C
- Maximum ambient temperature 40°C
- · Thermal protection: yes
- Insulation class B
- · Operation mode continuous
- Degree of protection IP68

MATERIALS:

- Motor housing: AISI 304 stainless steel
- · Shaft and rotor: AISI 304 stainless steel
- · Impeller: Noryl

High-pressure submersible pumps for pumping clean and slightly polluted water containing no abrasive particles (e.g. sand). Due to their high lifting height, they are used in agriculture for irrigation and drainage, domestic and agricultural water supply from wells, lakes and rivers. They can also be used for draining flooded rooms, garages and premises.

FEATURES:

- Produce high water pressure, needed for watering
- With a float switch controlling the pump operation and protecting it against running dry
- The design incorporates a cooling jacket so that the pumps do not have to be completely submerged
- 8 m power cable with plug
- Thermal protection built into the motor winding
- Warranty 24 months
- Warranty and post-warranty service

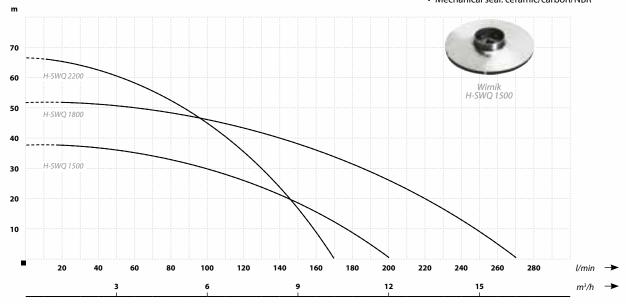

↑ Flow/Head

TECHNICAL DATA:

- Maximum liquid temperature: 35°C
- Maximum ambient temperature: 40°C
- Power supply: 230 V
- Insulation class: B (F HSWQ 1800)
- · Operating mode: continuous
- · Safety: IP68
- Power supply cable length: 8 m
- Working position: vertical
- Motor speed: 2850 RPM

Submersible pumps designed for pumping clean and slightly contaminated water. Due to the top quality stainless steel design, the pumps ensure long-term and reliable operation. The motor is equipped with thermal protection mounted in the winding. The pumps have a cooling jacket so that they do not have to be fully submerged. Compared to other SWQ pumps, the F marked pump provides a very high flow of up to 830 l/min. All pumps except the SWQ180 have impellers made of stainless steel and are equipped with float switches for operation control. Due to small size (12 cm diameter), the SWQ180 pumps can be used to extract water from small, narrow wells. The pumps do not have a float.

APPLICATION:

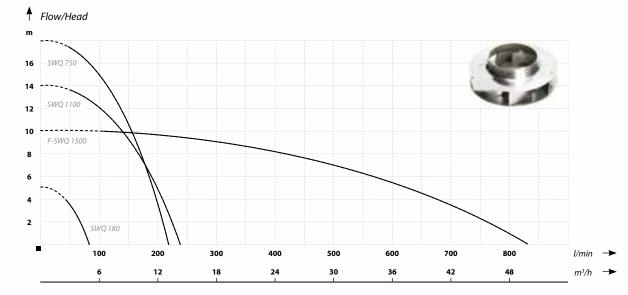

Pumping rainwater and surface water from ponds, lakes and rivers, supply of water to waterholes. Draining flooded rooms, houses, garages and premises, management of fish farms.

OPERATING CONDITIONS:

- Maximum liquid temperature 40°C
- Maximum ambient temperature 40°C
- Thermal protection: yes
- · Class F Insulation
- Operating mode continuous
- Protection IP68
- Water PH: 4-10

MATERIALS:

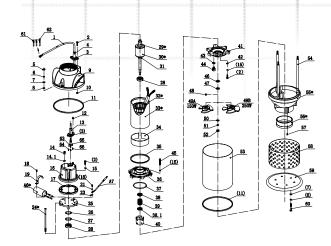

- Motor housing: stainless steel AISI 304
- Shaft and rotor: stainless steel AISI 304
- Impeller: stainless steel AISI 304
- Mechanical seal: ceramics/carbon/NBR
- Rotational speed of the electric motor: 2850RMP

75-FAXIAL-0,25 INOX

75-FAXIAL-0,25 series pumps are designed for pumping clean cold water.

Due to their high performance, they can be applied in aeration of fishing ponds and in irrigation for transporting large volumes of water.

FEATURES:

- High efficiency
- High performance with low current consumption
- Compact dimensions
- Top quality materials
- Thermal protection built into the motor winding
- 24 months warranty
- Warranty and post-warranty service

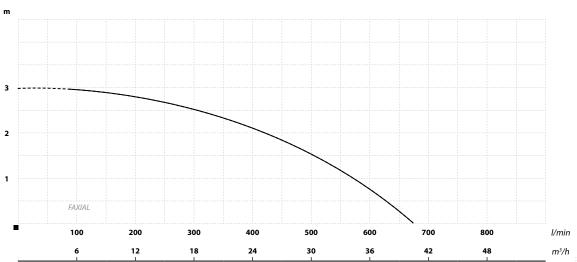

TECHNICAL SPECIFICATIONS:

- Maximum liquid temperature: 35°C
- Maximum ambient temperature: 40°C
- Power supply: 230V
- Insulation class: B
- Operating mode: continuous
- Safety: IP68
- Power cable length: 8 m terminated with a plug
- Working position: vertical
- Motor speed: 2850 RMP

MATERIALS:

- Motor housing: AISI 316 stainless steel
- Rotor housing: AISI 316 stainless steel
- Rotor: AISI 316
- Shaft and rotor: AISI 316 stainless steel
- Mechanical gland: Double: ceramics/carbon/NBR (ITALY)

Submersible pumps designed for pumping clean and slightly contaminated water. The motor housing is made of aluminium and the motor is equipped with thermal protection mounted in the winding. High pressure is a special feature of the WQX series pumps. Pump operation is controlled by a float switch. The WQX 250 are available with and without the float switch.

APPLICATION:

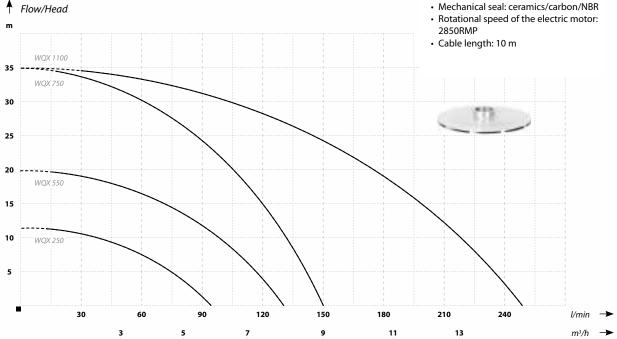

Pumping rainwater and surface water from ponds, lakes and rivers, supply of water to waterholes. Draining flooded rooms, houses, garages and premises.

OPERATING CONDITIONS:

- Maximum liquid temperature 30°C
- Maximum ambient temperature 40°C
- · Thermal protection: yes
- Class B Insulation
- Operating mode continuous
- Protection IP68
- Water PH: 5-8

Submersible pumps designed for pumping sewage and water from flooded premises. The pump is available with a float switch for automatic operation control or without the float switch. Threaded outlet connection and a set of adapters provide connection of the discharge hose with a hose clamp or fast-connection coupling. Magnum pumps are equipped with thermal protection mounted in the motor winding. The motor housing is made of aluminium and the impeller is made of cast iron. Magnum 2500 and 2900 pumps are available with and without the float switch.

APPLICATION:

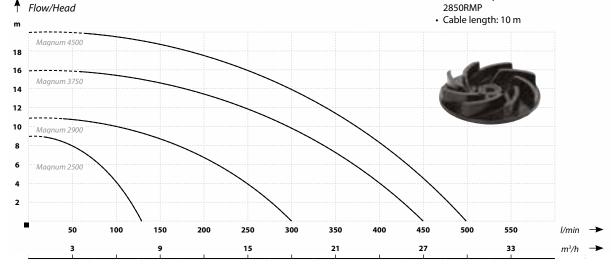

Pumping sewage from domestic septic tanks and draining flooded rooms, houses, garages and premises. Pumping rainwater and surface water from ponds, lakes and rivers, supplying water to waterholes

Submersible pumps designed for pumping sewage, dirty water, and water from flooded premises. SN-450 pump is made of cast iron with VORTEX-type impeller. It can pump water with mechanical impurities with particle diameter of up to 20 mm. The pump is equipped with a vertical float switch for easy automatic operation in 25 cm diameter wells. SN-450 pump is equipped with thermal protection mounted in the motor winding.

APPLICATION:

Flow/Head

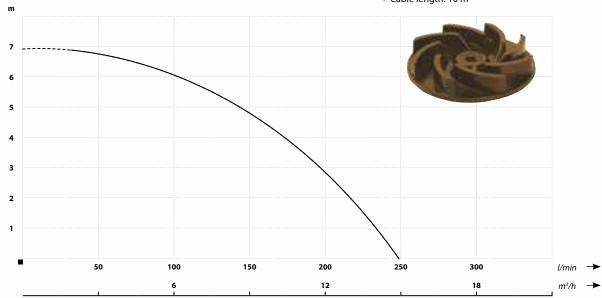

Pumping sewage from domestic septic tanks, draining flooded rooms, houses, garages and premises and pumping water from narrow well and canals. Pumping rainwater and surface water from ponds, lakes and rivers, supplying water to waterholes.

Submersible pump with a 40mm passage Vortex impeller for pumping sewage, dirty water and water from flooded rooms. SWQ SEPTIC pumps are made of stainless steel and cast iron in order to withstand the adverse sewage environment. Pump outlet connection provides connection of the discharge hose with a hose clamp or fast-connection coupling. These pumps are widely used in agriculture. The SWQ SEPTIC pump is equipped with thermal protection mounted in the motor winding and a float switch for operation control.

APPLICATION:

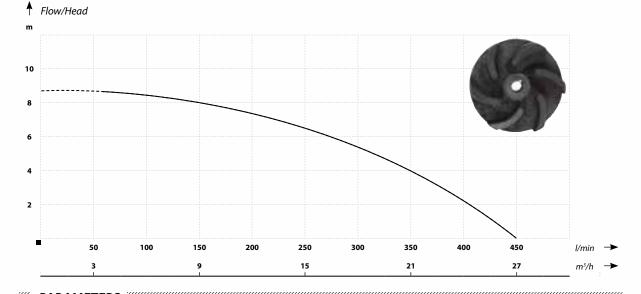

Pumping sewage from domestic septic tanks and draining flooded rooms, houses, garages and premises. Pumping rainwater and surface water from ponds, lakes and rivers, supplying water to waterholes.

Professional submersible sewage pumps with two-channel impeller. The BIG 1500 pump is available as 230 V \sim /50 Hz version, BIG 2200 - as 400 V \sim 3 / 50 Hz. The impeller design reduces the risk of its clogging and ensures pumping of medium containing solids with maximum particle diameter of 50 mm. The BIG 1500 pump is equipped with a float switch for operation control. Single-phase pumps are supplied with thermal protection mounted in the motor winding. Due to the high quality materials used and the durable design, the pumps can be used in industrial applications.

APPLICATION:

Flow/Head

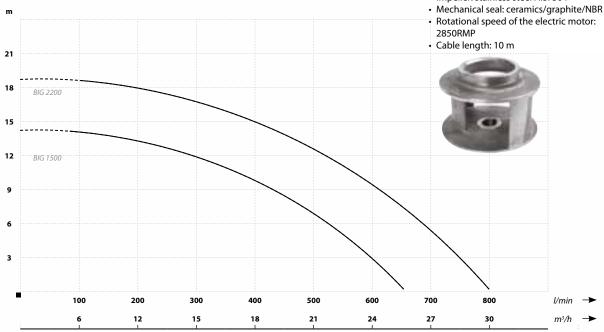

Pumping rainwater and surface water. Draining sewage in buildings, retail facilities and manufacturing plants, in industrial cooling or process water systems. Used in agriculture for draining and irrigation.

OPERATING CONDITIONS:

- Maximum liquid temperature 40°C
- Maximum ambient temperature 40°C
- · Thermal protection: yes
- Class F Insulation
- Operating mode continuous
- Protection IPX8
- Water PH: 5-9
- · Liquid density: 1.2x10^3kg/m^3

Professional submersible pump compliant with the most demanding European standards, intended for customers using drainage pumps in their professional work. Due to the use of a closed impeller, the pump can pump clean and slightly contaminated water.

With its 1500 W motor, 3-inch outlet, and maximum flow of up to 1400l/min, as well as a relatively low weight, the pump can be used to drain flooded houses, premises and garages during minor and major flooding. The pump is equipped with a float switch for operation control and thermal protection mounted in the motor winding.

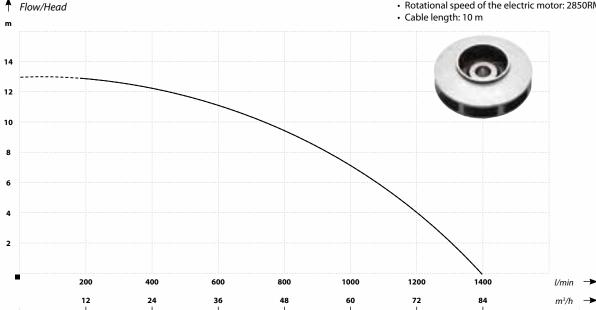

Pumping rainwater and surface water. Drainage of flooded households, agriculture farms, premises and garages. Pumping cooling or process water in industrial systems. Used in agriculture for draining and irrigation. The pump can be used in fish farms.

Submersible pump with a 40mm passage Vortex impeller for pumping sewage, dirty water and water from flooded rooms. The pump is compliant with the most demanding European standards, therefore it is intended for customers using such products in their professional work. WQ PRO pumps are made of cast iron in order to withstand the adverse sewage environment. Pump outlet connection provides connection of the discharge hose with a hose clamp or fast-connection coupling. These pumps are widely used in agriculture. The WQ PRO pump is equipped with thermal protection mounted in the motor winding and a float switch for operation control. The WQ 1500 PRO pump is mainly intended for customers in the civil engineering industry, where the top quality and high performance is required. It can also be used in industrial applications.

APPLICATION:

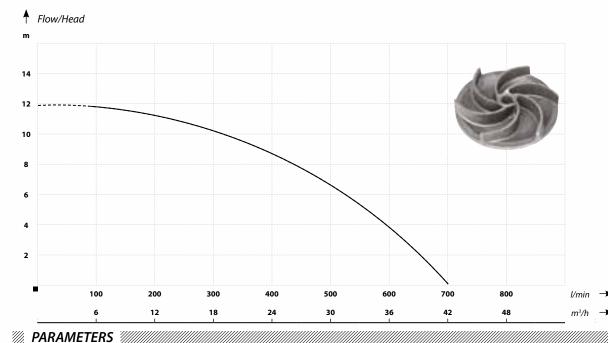

Pumping sewage from domestic septic tanks and draining flooded rooms, houses, garages and premises. Pumping rainwater and surface water from ponds, lakes and rivers, supplying water to waterholes.

Professional submersible pumps intended for customers who need strong and durable product in their professional work. Due to the top quality materials used, such as stainless steel and cast iron, and very high performance, WQ PROFESSIONAL pumps can operate in demanding conditions and withstand the adverse sewage environment. The pumps are widely used in sewage pumping stations. All pumps feature a factory-mounted float switch for operation control and thermal protection mounted in the motor winding. Additionally, the WQ Professional 1500 pump is equipped with a cutting impeller with 50 mm passage. Discharge hose can be connected to the pump outlet with a hose clamp or fast-connection coupling.

APPLICATION:

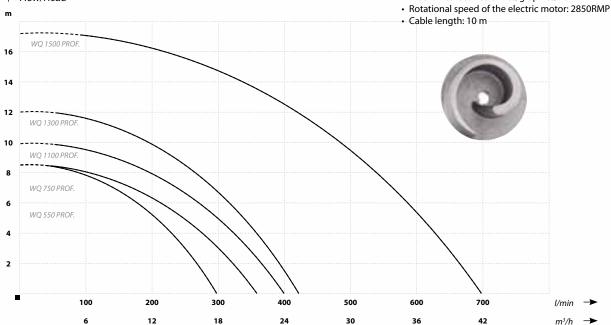

Pumping sewage from domestic septic tanks and draining flooded rooms, houses, garages and premises. Sewage treatment plants. Occasional renovation works. Pumping rainwater and surface water from ponds, lakes and rivers, supplying water to waterholes.

75-FWQ-1,5 pumps are designed for pumping sewage, dirty water and water from flooded rooms. The pumps are used to pump sewage from domestic sump pits and to drain flooded rooms, houses, garages and premises. They are also used in pumping rainwater and surface water from ponds, lakes and rivers, and for feeding ponds.

CHARACTERISTICS:

- · High efficiency with low motor power
- Rotor blades allow for breaking up the pumped elements
- Threaded discharge port for easy connection of discharge hose using a hose clamp or quick release coupling
- Top quality materials
- Thermal protection built into the motor winding
- · 24 months warranty
- Warranty and post-warranty service

WQ-65-1,5

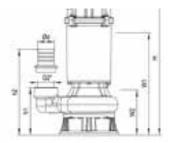

Professional submersible pumps for pumping domestic sewage and for draining flooded rooms. To ensure trouble-free operation, the pumps are equipped with overload protection mounted in the motor winding. If there is a risk of overloading the motor, the protection will switch off the pump. The construction made of cast iron, alloy and stainless steel makes the pumps resistant to mechanical damage and chemical corrosion. The pump impeller has a single-channel design, resulting in high efficiency. The pumps are fitted with a threaded discharge port which allows the discharge hose to be connected by means of a hose clamp or quick coupling.

The pumps are used for pumping sewage from domestic and agricultural septic tanks and for $\,$ draining flooded premises, houses, garages and apartments. Pumping rainwater and surface water from ponds, lakes and rivers, feeding ponds. Domestic wastewater treatment plants.

FEATURES:

- Top quality materials
- · 24 months warranty

50-KBFU-0,40 INOX 50-KBFU-0,75 INOX

KBFU series submersible pumps are designed for professional draining works and for applications where there is a risk that pumped water contains sand or sludge. The pumps are intended for removal of water from flooded rooms, houses, garages and premises, and construction sites. Pumping rainwater and surface water from ponds, lakes and rivers. Civil engineering. Mines and quarries.

CHARACTERISTICS:

- Suitable for pumping water with sand
- Capable of pumping water to a low level of 5 mm
- Column float switch (50-KBFU-0.75 INOX)
- · Top quality materials
- · Threaded discharge port for easy connection of discharge hose using a hose clamp or quick release coupling
- 8m power cable with a plug
- · Thermal protection built into the motor winding
- · 24 months warranty
- · Warranty and post-warranty service

TECHNICAL DATA:

- Maximum liquid temperature: 40°C
- Maximum ambient temperature: 40°C
- Power supply: 230V
- · Insulation class: B
- · Operating mode: continuous
- Protection class: IP68
- Length of power supply cable: 8m with a plug
- · Working position: vertical
- Motor speed: 2850 RPM

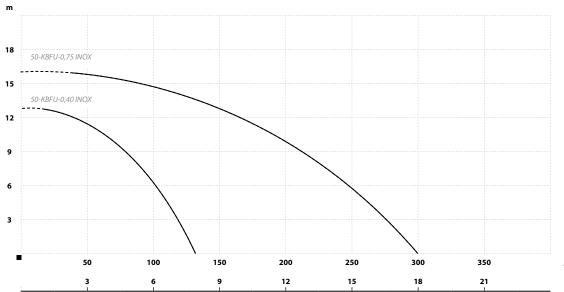

MATERIALS:

- Motor housing: AISI 316 stainless steel
- · Impeller housing: Grey cast iron
- Shaft and rotor: AISI 316 stainless steel
- · Impeller: Steel / glass fibre reinforced PA
- Mechanical seal: Double: ceramic/carbon/NBR (ITALY)
- Dimensions 40cmx24cm
- weight 12.4 kg
- port 2'

25-KBFU-0,45 50-KBFU-0,45

KBFU submersible pumps are designed for professional drainage works and everywhere where there is a risk that pumped water contains sand or sludge. The pumps are used for draining flooded rooms, houses, garages, apartments or construction sites. Pumping rainwater and surface water from ponds, lakes and rivers. Civil engineering. Mines and quarries.

FEATURES:

- Suitable for pumping water with sand
- Post float switch (50-KBFU-0,45)
- Capable of pumping water to a low level of 3 mm (25-KBFU-0.45)
- Top quality materials
- · Thermal protection built into the motor winding
- The pump motors are from the Japanese company NSK
- · 24 months warranty
- Warranty and aftermarket service

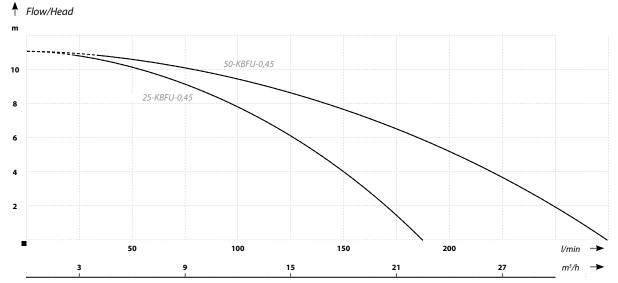

MATERIALS:

- Motor housing: stainless steel AISI 304
- · Impeller housing: grey cast iron
- Shaft and rotor: stainless steel AISI 304
- Impeller: grey cast iron with heavy wear coating / chromium alloy
- Mechanical gland: Sic-Sic / Carbon-Sic
- Bearings: NSK

80-KBFU-4,0-4P

KBFU-4P series submersible pumps are designed for heavier dewatering work in mines,

Characterised by a durable and robust design, the 4P series pump motors feature 4 poles, effecting in significant extension of the life of the equipment in relation to its 2-pole counterparts. In addition, the rotor and the external agitator are made of chrome alloy, enabling operation under severe conditions. Thanks to the casing in the form of a cooling jacket, they can operate only partially submerged.

The pumps are used for draining flooded areas, pumping raw sewage, dewatering construction sites. Pumping rainwater and surface water from ponds, lakes and rivers. Civil engineering. Mines and quarries. Where there is a risk of bentonite or a significant sand content in the pumped water.

FEATURES:

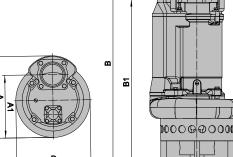

- · Suitable for pumping water with sand
- Top quality materials
- · Double thermal protection embedded in the motor winding
- · 24 months warranty
- · Warranty and aftermarket service

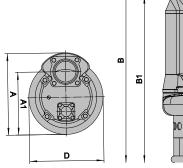

TECHNICAL DATA:

- Maximum liquid temperature: 40°C
- Maximum ambient temperature: 40°C
- Power supply: 400V
- · Insulation class: F
- Operating mode: continuous
- · Safetv: IP68
- Length of power cable: 10m
- · Motor speed: 1450RMP
- Motor type: 4-pole
- Water PH: 5-9
- Liquid density: 1.2x10^3kg/m^3
- Maximum draught 7 m

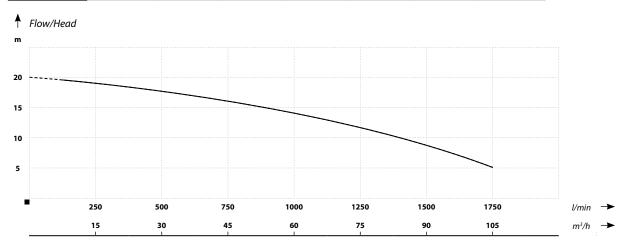

MATERIALS:

- · Motor housing: grey cast iron alloy
- Body: grey cast iron
- · Shaft and rotor: stainless steel AISI 420SS
- · Impeller: grey cast iron/chromium alloy
- · Agitator: grey cast iron/chromium alloy
- · Bearings: NSK
- Mechanical gland: Sic-Sic / Sic-Sic

7 IBX

IBX series submersible pumps are designed for pumping water contaminated by abrasive materials such as sand and silt, while maintaining a compact design. Mainly used in single-family construction for trench dewatering. Thanks to the casing in the form of a cooling jacket they can operate only partially submerged. A double mechanical gland resistant to high pressure is used to ensure guaranteed tightness. Semi-open impeller made of high chromium alloy with wear plate (ductile iron) provides excellent durability. The pumps feature thermal protection installed in the winding.

For draining flooded rooms, houses, garages or apartments. Watering. Drainage of construction sites. Pumping rainwater and surface water from ponds, lakes and rivers. Civil engineering. Anywhere where there is a risk of significant sand and sludge content in the pumped water.

KBFU-AUTO

Submersible pumps of the KBFU-AUTO series are designed for professional dewatering works, based on the KBFU series. Mainly used in the construction industry for drainage of excavations. In contrast to the KBFU series, the pumps are equipped with a control unit and an external agitator to increase the life of the pumps in more severe conditions. The pumps are characterised by their durable and robust construction. Thanks to the automatic control, the pumps require virtually no manual operation and additionally have a number of safety features. Thanks to the cooling jacket enclosure they can operate only partially submerged. A double mechanical gland is used to ensure guaranteed tightness.

The pumps are used for the drainage of flooded rooms, garages and premises. Pumping of rainwater and surface water from ponds, lakes and rivers. Civil engineering. Mines and quarries.

Wherever there is a risk of bentonite or significant sand and sludge content in the pumped water.

FEATURES:

- · Suitable for pumping water with sand
- · Top quality materials
- Thermal protection built into the motor winding
- · Warranty 24 months
- Warranty and post-warranty service

TECHNICAL DATA:

- Maximum liquid temperature: 40°C
- Maximum ambient temperature: 40°C
- Thermal protection: 230V yes / 400V no
- Insulation class: F
- Operating mode: continuous
- Safety: IP68
- Power supply cable length: 8 m
- Motor speed: 2850 RMP
- Liquid density: 1.2x10^3kg/m^3
- Maximum submersion 7 m

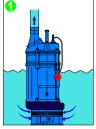

MATERIAL:

- Motor housing: alloy/grey cast iron
- · Body: grey cast iron
- Shaft and rotor: stainless steel AISI 304
- Impeller: grey cast iron with heavy wear coating/chromium alloy
- Bearings: NSK
- Mechanical gland:
 ≤ 2.2 kW: Sic-Sic / Carbon-Sic
 - ≥ 3.7 kW: Sic-Sic / Sic-Sic

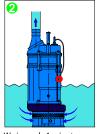

CONTROL MODULE - FUNCTIONS:

- Phase reversal protection to ensure correct rotation of the rotor;
- Automatic pump stop in the event of overload (e.g. by blocked rotor) and incorrect voltage: after an emergency stop of the pump, a starting test is carried out within 5 minutes.
- Overheating protection: if the temperature is too high, the pump switches off and automatically restarts after cooling down.
- Adjustable fluid sensor level.

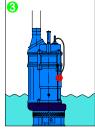

Automaczyczne sterowanie

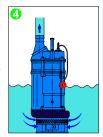

Pompa pracuje tak długo dopóki czujnik płynu jest zanurzony.

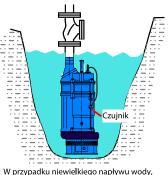

W ciągu ok. 1 minuty po odsłonięciu czujnika płynu pompa zostanie wyłączona

Po ok. 1 minucie pompa jest wyłączona do czasu ponownego zanurzenia czujnika płynu.

Gdy czujnik zostanie zanurzony poma uruchomi się automatycznie

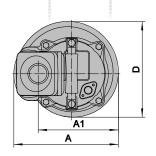

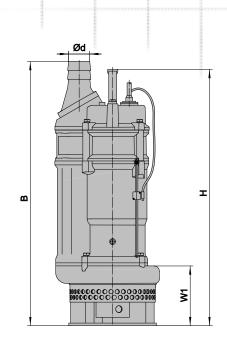

W przypadku niewielkiego napływu wody, zalecany jest montaż zaworu zwrotnego aby pompa nie uruchamiała się zbyt często oraz przesunięcie czujnika płynu ku górze.

A series of submersible pumps with cutting system designed for pumping domestic sewage. In case of flooding, they can be used for draining rooms. The robust construction of the pump made of durable cast iron, the cutting system with a cutting knife and very reasonable price have made the pumps very popular among individual customers. The pumps are equipped with a float switch for automatic operation. To ensure reliable operation, the pumps are equipped with overload protection mounted on the cable. Pump outlet provides connection of the discharge hose with a hose clamp or fast-connection.

APPLICATION:

Flow/Head

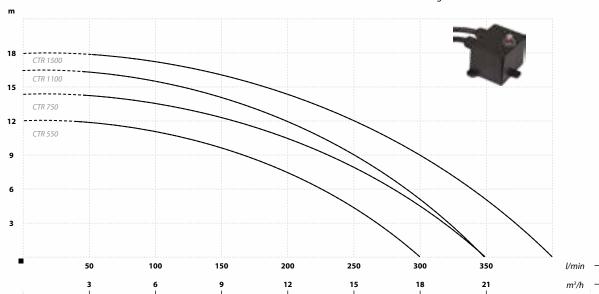

Pumping sewage from domestic septic tanks and draining flooded rooms, houses, garages and premises. Pumping rainwater and surface water from ponds, lakes and rivers, supplying water to waterholes.

OPERATING CONDITIONS:

- Maximum liquid temperature 40°C
- Maximum ambient temperature 40°C
- Thermal protection: yes
- Class B Insulation
- Operating mode continuous
- Protection IP68
- Water PH: 5 9

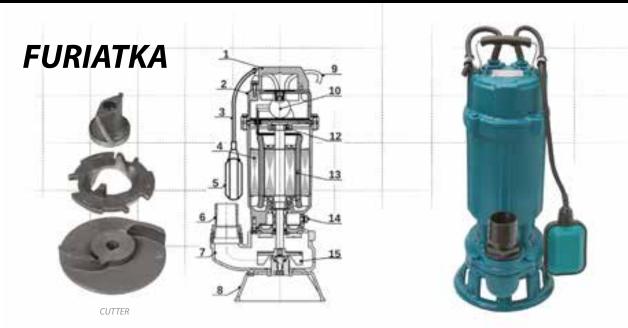

MATERIALS:

- Motor housing: grey cast iron
- Body: grey cast iron
- Shaft and rotor: stainless steel AISI 304
- Impeller: grey cast iron
- Cutting knife: grey cast iron/stainless steel AISI 304
- Mechanical seal: ceramics/graphite/NBR
- Rotational speed of the electric motor: 2850RMP
- Cable length: 10 m

Submersible cast iron pumps with cutting system. The pumps are designed for pumping domestic sewage and draining flooded rooms. In order to minimize the risk of clogging, the pumps are equipped with an exceptionally effective "screw" cutting system. To ensure reliable operation, the pumps have overload protection mounted on the cable. To prevent motor overloading, the protection will stop the pump. The cast iron construction makes the pumps resistant to mechanical damage and chemical corrosion. The pumps are equipped with a float switch for automatic operation control, and the pump outlet provides connection of the discharge hose with a hose clamp or fast-connection. Their robust design and exceptionally effective cutting system have made the Furiatka series one of the most popular pumps with cutting system on the market in Poland.

A series of professional submersible pumps with cutting system designed for customers who need a strong and reliable product in their professional work. The top quality materials used and very high performance makes KRAKEN 1800 pumps suitable for operation in harsh conditions - stainless steel and cast iron design ensures the pumps withstand the adverse sewage environment. These pumps are widely used in sewage pumping stations. Pump operation is controlled by the factory-mounted float switch. KRAKEN 1800 is equipped with a multi-channel disk cutting system in order to minimize the risk of clogging. KRAKEN 1800 DF has an exceptionally effective two-channel screw cutting system. The motors with Class F winding insulation are additionally equipped with thermal protection mounted in the winding. Both models are supplied with flanges for connecting pipes or fast-connection, and an adapter for connecting 2" discharge hose with a hose clamp. The pumps are available as single-phase 230V ~/ 50Hz versions, with a float switch, and 3-phase 400V ~ 3 / 50Hz version.

KRAKEN DF can be supplied with a guide rail system for installation in pump stations. The guide rail system is sold separately.

The UP60/80 pumps are equipped with a two-stage hydraulics to increase the maximum pressure. An important feature of KRAKEN 1800 is a multi-channel disk cutting system designed to minimize the risk of clogging. In addition, the outlet is threaded in order to connect a pipeline or fast connection. The pump is supplied with thermal protection mounted in the motor winding.

APPLICATION:

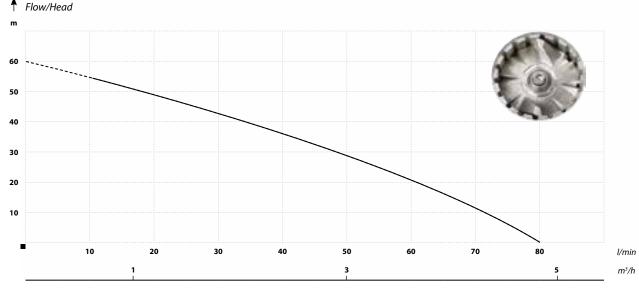

The pump is designed for operating in pressure sewage systems.

A series of professional submersible pumps with cutting system, designed for customers who need a strong and reliable product in their professional work. The top quality materials used and very high performance makes ZWQ pumps suitable for operation in harsh conditions. These pumps are widely used in sewage pumping stations. Single-phase pumps have a float switch for operation control. All pumps are equipped with a three-channel cutting system integrated with the impeller in order to minimize the risk of clogging. All ZWQ pumps are suitable for installation with a guide rail system. The motors have Class F winding insulation and single-phase versions are additionally equipped with thermal protection mounted in the winding. Flanges for connecting pipes or fast-connection. The pumps are available as single-phase 230V \sim / 50Hz versions with a float switch, and 3-phase 400V \sim 3 / 50Hz version. The pumps have bearings manufactured by NSK in Japan.

The pumps can be supplied with guide rail systems for installation in pump stations. The guide rail system is sold separately.

APPLICATION:

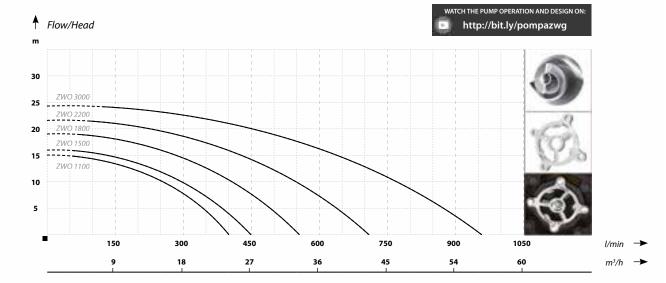

Pumping sewage from domestic septic tanks and draining flooded rooms, houses, garages and premises. Sewage treatment plants. Pumping rainwater and surface water from ponds, lakes and rivers, supplying water to waterholes.

GUIDE RAIL SYSTEM

It is a device for mounting submersible pumps in sewage treatment plants on a so-called "rail". In order to mount the pump, it must be equipped with a horizontal flange.

The set includes:

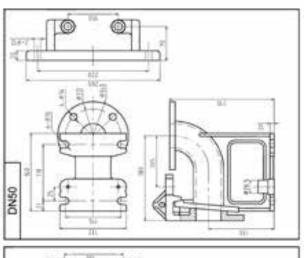

- 1. Adapter
- 2. Guide rail saddle
- 3. Upper guide rail bracket

Using guide rail system connection - the lifting system allows to remove the pump without disassembling the entire pipeline.

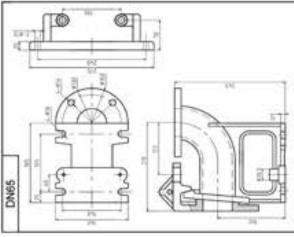

It is particularly important in case of heavy pumps, such as ZWQ or MWQ.

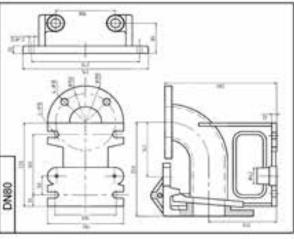

Suitable for:

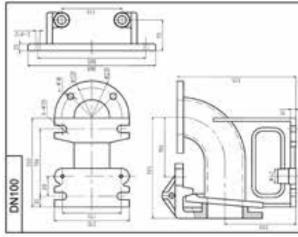

- ZWQ
- MWQ
- Kraken 1800 DF

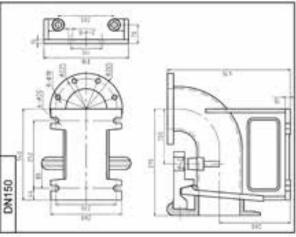

AERAT 1

Hydrotechnical device - Aerator is mainly used in professional aeration applications for marine and freshwater aquaculture. It creates mixtures with a high percentage of dissolved oxygen and has a large area of oxygen aeration, which improves water quality on agriculture farms and supports growth. The device consists of a motor with impeller and a triangular baseplate.

Areat 1 is designed for clean water from ponds, lakes and other bodies of water without the content of abrasive solids.

Description:

- Advanced technology: a unique air intake chamber and a star-shaped impeller design
 provide high oxidation capacity and accurate gas and water mixing. Compared to other
 devices, the amount of oxygen supplied is up to 30% higher, which translates into lower
 farming costs.
- Many small air bubbles are created on the contact surface of the impeller and the surrounding water. A rotating impeller creates water flow extending horizontally at a certain speed and flowing
- upwards, stirring the water below and thus increasing the range of oxygenation.
 This solution eliminates a dead angle effect creating a large gas-water intersection area, which increases the oxygen dissolution.
- A large number of small air bubbles increases the contact surface of water and gas as well
 as the rate of oxygen dissolution, and as a result, water is more effectively saturated with
 dissolved oxygen and many harmful substances are removed. Improving water quality
 directly affects the health of cultured organisms and accelerates the growth rate.
- The equipment is compact, flexible, easy to install and use, which saves installation time and costs.

| Model | Voltage | Power | Aeration | Oxygenation | Max. temperature | Immersion depth | Active operating area |
|---------|---------|-------|----------|--------------------------|------------------|-----------------|-----------------------|

2"STING

2 "STING is the first and at the moment the only IBO 2" deep well displacement pump. The diameter of the pump does not exceed 53 mm and the hydraulic section consists of the stator, rotor and clutch. The pump is mainly made of stainless steel. The pump is equipped with a 14 m cable terminated with a plug and the capacitor is built into the motor so that pump is ready for installation immediately after unpacking. The pump is equipped with thermal protection mounted in the motor winding.

APPLICATION:

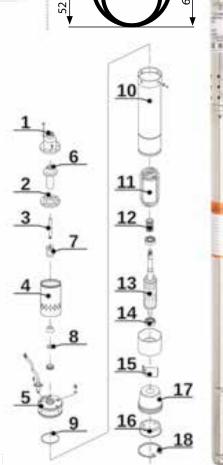

Supply of water from deep wells to small single-family houses and recreational plots. The pump can be used by companies providing hydro-geological services.

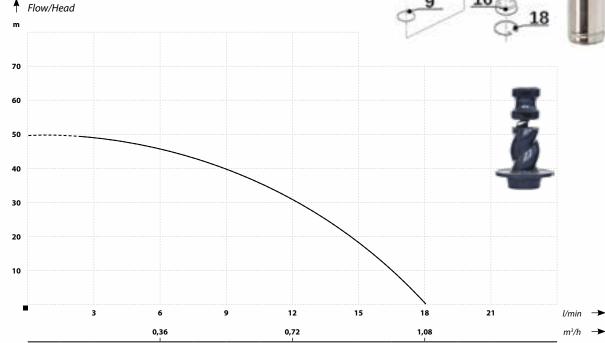

OPERATING CONDITIONS:

- Maximum liquid temperature 40°C Maximum ambient temperature 40°C
- · Class B Insulation
- Operating mode continuous
- · Protection IP68

MATERIALS:

- Housing: stainless steel AISI 304
- Shaft and rotor: stainless steel AISI 304
- Screw: stainless steel AISI 304
- Stator: NBR
- · Motor: oil cooling
- Mechanical seal: ceramics/Sic
- · Rotational speed of the electric motor: 2850RMP

3" SQIBO / SCR

75mm deep well displacement pumps (SQIBO/3"SCR). The pump is mainly made of stainless steel, e.g. housing, bolts, inlet/outlet and rotor. Depending on the customer's requirements, the pumps are equipped with power cables of varying lengths terminated with a plug. Due to the capacitor built into the motor, the pump is ready for installation immediately after unpacking. The pump is equipped with thermal protection mounted in the motor winding. SQIBO and SCR pumps are among the most popular screw pumps available on the Polish market. The pumps are recognized by customers for their robust design and attractive price.

APPLICATION:

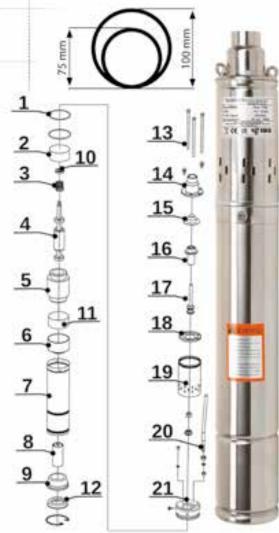

Supply of water to single-family houses and holiday houses.

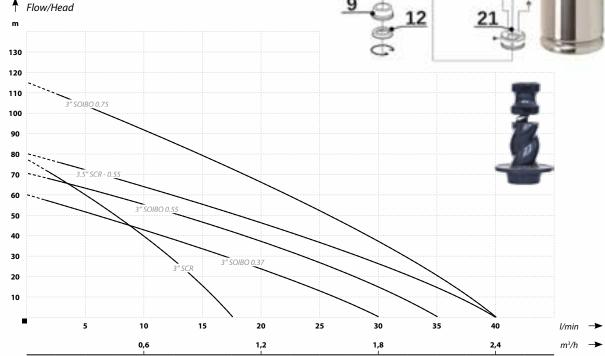

OPERATING CONDITIONS:

- Maximum liquid temperature 40°C
- Maximum ambient temperature 40°C
- · Class B Insulation
- Operating mode continuous
- Protection IP68

3" SKM / 4 "SKM

3"SKM 100

3" (75 mm diameter) multi-stage deep well peripheral pump. Due to the small diameter, the pump can be installed in well with 25 cm diameter pipes. Depending on the customer requirements, the pump can be equipped with standard 15 or 20 m cable with a plug. Due to the capacitor built into the motor, the pump is ready for installation immediately after unpacking. The pump is supplied with thermal protection mounted in the motor winding.

4"SKM 100

4" (98 mm diameter) deep well peripheral pumps. The pumps are designed for minimum 4-inch wells. Durable materials such as stainless steel and brass have been used in the production of pump impellers. The pumps are available with the following power cables terminated with a plug:

4"SKM 100 – 15m / capacitor built into the motor

4"SKM 100 - 20m + control box

4"SKM 150 - 15m / capacitor built into the motor

4"SKM 150 - 20m + control box

4"SKM 200 - 15m / capacitor built into the motor

Depending on the version, the 4"SKM pumps have thermal protection mounted in the motor winding or in the control box. The pumps are available as single-phase 230 V \sim /50 Hz versions - 4 SKM, and 3-phase 400 V \sim 3/50 Hz versions - 4 SKT.

APPLICATION:

Supply of water to single-family houses and holiday houses. Irrigating gardens.

OPERATING CONDITIONS:

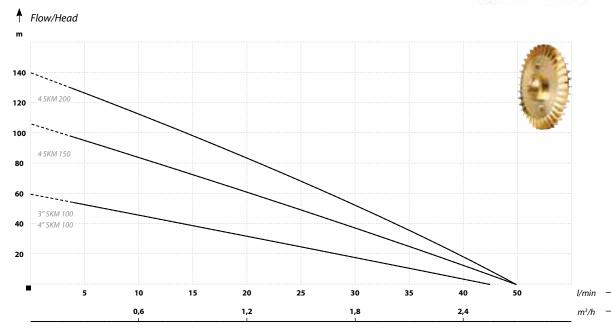

- Maximum liquid temperature 35°C
- Maximum ambient temperature 35°C
- · Class B Insulation
- · Operating mode continuous
- Protection IP68

MATERIALS:

OLA INOX / AUTO

OLA / OLA INOX

98 mm diameter multi-stage deep well pumps for minimum 4" diameter ring and drilled wells. The pumps have a motor cooling jacket so they do not have to be completely submerged, and there is no need for a jacket tube, which is required for classic multi-stage pumps. Due to the capacitor built into the motor, the pump is ready for installation immediately after unpacking. The pumps are equipped with thermal protection mounted in the motor winding.

OLA AUTO

The OLA AUTO pumps are equipped with automatic pump control so there is no need to install additional equipment such as a pressure switch or external PC or SK control. The principle of the sensor operation is based on the flow rate monitoring. When the pump is connected to the electrical or hydraulic system, opening the tap will start the pump, and closing it will stop the pump within a few seconds. The pump has a built-in non-return valve that limits the return of water from the system.

Both Ola 60/60 and OLA AUTO pumps can be installed together with a pressure tank, however, it should be remembered that an additional pressure switch does not need to be installed with OLA AUTO pumps.

APPLICATION:

Pumping water from ring wells, deep water wells, lakes and rivers. Supply of utility (tap) water to holiday houses and single-family houses. Irrigating gardens.

OPERATING CONDITIONS:

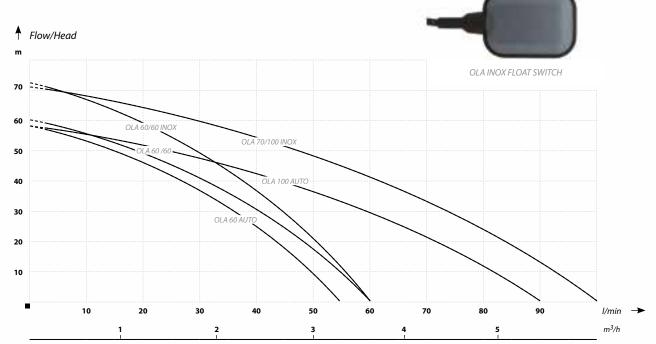

- Maximum liquid temperature 35°C
- · Maximum ambient temperature 35°C
- · Class B Insulation
- · Operating mode continuous
- Protection IP68

2.5" MULTI-STAGE DEEP WELL SAND RESISTANT PUMPS

2,5" STM

INCREASED RESISTANCE TO SAND

2.5" (66 mm diameter) multi-stage deep well pumps

with increased resistance to sand. The 2.5 STM pumps were the first multi-stage pumps available on the Polish market with a diameter of less than 3". The pump capacitor is built into the motor. The pumps are available with 1.5 m long cable section or 20 m long stock cable terminated with a plug. Increased resistance to sand is achieved by using "floating impellers" and the selection of wear-resistant materials. The pumps are equipped with thermal protection mounted in the motor winding.

ΑΡΡΙΙΚΑΤΙΩΝ:

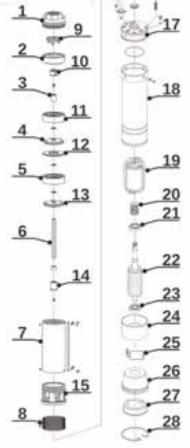

Supply of water to single-family houses and holiday houses. Irrigating small gardens.

4"SD/4"SDM INCREASED RESISTANCE TO SAND

......

98 mm diameter multi-stage deep well pumps with increased resistance to sand, intended for minimum 4 inch diamater wells

All SD pumps have PZH (National Institute of Hygiene) approval. 4SD/4SDM pumps are available with IBO and IBO ITALY motors as 400V~3 /50Hz and 230V / 50Hz versions. Increased resistance to sand is achieved by using "floating impellers" and the selection of wear-resistant materials: brass inlet and outlet, AISI 304 stainless steel housing, shaft and filter screen, and the impellers made of high quality plastic materials. Pumps with 230 V \sim / 50 Hz motors are equipped with a control box with built-in capacitor and overcurrent protection. Pumps with 0.75 kW to 2.2 kW motors are available with 1.5 m or 20 m long cable. 4SD 2/12 pumps have 20 m power cable.

Pumps with 3 kW to 4 kW motors are available with 2 m long cable. Pumps with 5.5 kW do 7.5 kW motors are available with 3 m long cable. Upon request, the cable can be extended by any length. The IBO 4SD series were the first pumps on the market to be known as "sand resistant". Currently, they are among the few on the market to provide such high sand resistance. Maximum sand content in water is up to 5%.

APPLICATION:

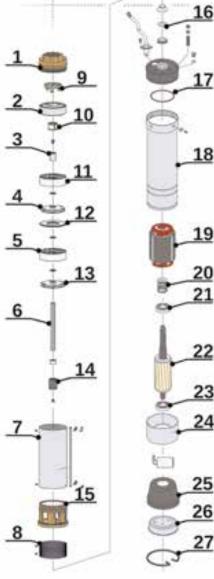

Supply of water to single-family houses and farms from deep well intakes. Irrigating gardens and orchards. Land drainage/dewatering. Water supply systems. Industrial applications.

OPERATING CONDITIONS:

- Maximum liquid temperature 35°C
- Maximum ambient temperature 35°C
- · Class B/F Insulation
- Operating mode continuous
- Protection IP68

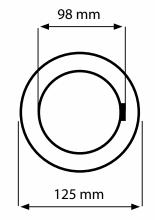

MATERIALS:

- Inlet/outlet: brass
- Housing: stainless steel AISI 304
- Shaft and rotor: stainless steel AISI 304
- Impeller: Noryl
- Venturi tube: Noryl
- Mechanical seal: Ceramics/Sic/NBR
- Motor: oil cooling
- Rotational speed of the electric motor: 2850RMP

5"SD

INCREASED RESISTANCE TO SAND

127 mm diameter multi-stage deep well pumps with increased resistance to sand, intended for minimum 5" wells. The IBO SD series were the first pumps on the market to be known as "sand resistant". The "sand resistance" is the unquestionable advantage of IBO pumps over competing products due their innovative and rare design with increased resistance to sand, unusual in 3-inch pumps. For 5SD 25 pumps, the maximum sand content in water is 5%. Increased resistance to sand is achieved by using "floating impellers".

Increased resistance to sand is achieved by using "floating impellers". Upon request, the cable of any length can be installed.

APPLICATION:

Supply of water to large farms from deep water intakes, garden and orchard irrigation, shrubs and tree nurseries, land drainage/dewatering. Water supply systems, industrial applications.

OPERATING CONDITIONS:

- Maximum liquid temperature 35°C
- Maximum ambient temperature 35°C
- Class B Insulation
- Operating mode continuous
- Protection IP68

Flow/Head

MATERIALS:

- · Inlet/outlet: grey cast iron
- · Housing: stainless steel AISI 304
- Shaft and rotor: stainless steel AISI 304
- · Impeller: Noryl
- Venturi tube: Noryl
- Mechanical seal: Ceramics/Sic/NBR
- · Motor: oil cooling
- · Rotational speed of the electric motor: 2850RMP

6" MULTI-STAGE DEEP WELL SAND RESISTANT PUMPS

6"SD

INCREASED RESISTANCE TO SAND

Wielostopniowe pompy głębinowe o średnicy 146 mm, z podwyższoną odpornością na piasek, przeznaczone do instalacji w studniach o minimalnej średnicy wewnętrznej 160 mm. Pompy służą do zaopatrywania w wodę domów jedno- i wielorodzinnych, gospo-darstw rolnych, a także do zasilania systemów nawodnieniowych (zraszaczy, linii kroplu-jących). Pompy mają zastosowanie również w przemyśle oraz odwodnieniach.

CECHY:

- Podwyższona odporność na piasek
- Atest PZH
- Najwyższej jakości materiały
- Kabel zasilający 2m
- Zabezpieczenie termiczne wbudowane w uzwojeniu silnika
- Gwarancja 24 miesiące
- Serwis gwarancyjny oraz pogwarancyjny

DANE TECHNICZNE:

- Maksymalna temperatura cieczy: 35°C
- Maksymalna temperatura otoczenia: 35°C
- Zasilanie: 230 V lub 400 V
- Klasa izolacji: B
- Tryb pracy: ciągły
- Bezpieczeństwo: IP68
- Cable length zasilającego: 2 m
- Pozycja pracy: pionowa
- Max. liczba uruchomień na 1h: 20
- Max. głębokość zanurzenia: 100 m
- Prędkość obrotowa silnika: 2850 RMP

MATERIAŁY:

- Króciec ssący/ tłoczny: żeliwo szare
- Obudowa: stal nierdzewna AISI 304
- Wał i rotor: stal nierdzewna AISI 304
- Wirnik: noryl
- Dyfuzor: noryl
- Dławica mechaniczna: Ceramika/Sic/NBR
- Silnik: chłodzony olejem

3" INOX MULTI-STAGE DEEP WELL PUMPS

3" ISP

MADE ENTIRELY OF STAINLESS STEEL

 $76\,mm\,diameter\,stainless\,steel\,multi-stage\,deep\,well\,pumps\,intended\,for\,wells\,with\,4''\,minimum\,diameter.$ Maximum sand content in water is up to 3%. Due to the materials used, the ISP pumps are among the most durable deep well pumps. Inlet, outlet, housing, shaft and impeller are made entirely of stainless steel. The pumps are supplied with 3" oil-cooled motors.

The 3" ISP series are the first pumps made entirely of stainless steel available on the Polish market. The pumps have a 2 m long power cable that can be extended.

Upon request, the cable can be extended by any length. APPLICATION:

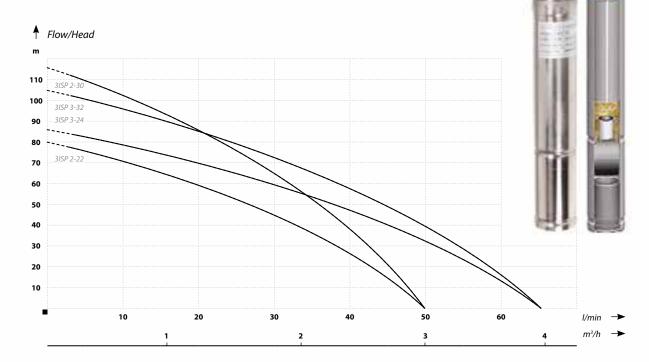

Supply of water to single-family houses and holiday houses. Irrigating gardens. Drainage/dewatering.

OPERATING CONDITIONS:

- Maximum liquid temperature 35°C
- · Maximum ambient temperature 35°C
- Class B Insulation
- Operating mode continuous
- Protection IP68

MATERIALS:

- Inlet/outlet: stainless steel AISI 304
- · Housing: stainless steel AISI 304
- Shaft and rotor: stainless steel AISI 304
- Impeller: stainless steel AISI 304
- Venturi tube: stainless steel AISI 304
- Mechanical seal: Ceramics/Sic/NBR
- · Motor: oil cooling
- Rotational speed of the electric motor: 2850RMP

4" ISP / 4" ISPM

98 mm diameter stainless steel multi-stage deep well pumps intended for minimum 4" diamater wells. Maximum sand content in water is up to 0.3%.

Due to the materials used, the ISP pumps are among the most durable deep well pumps. Inlet, outlet, housing, shaft and impellers are made entirely of stainless steel.

4 ISPM pumps are available with IBO and IBO ITALY 230 V \sim / 50Hz motors. 4 ISP pumps are available with IBO and IBO ITALY 400 V \sim / 50Hz motors.

Pumps with 230 V \sim / 50 Hz motors are equipped with a control box with built-in capacitor and overcurrent protection.

Pumps with $0.75\,kW$ to $2.2\,kW$ motors are available with $1.5\,m$ or $20\,m$ long cable. Upon request, the cable can be extended by any length.

APPLICATION:

Supply of water to single-family houses and farms from deep well intakes. Irrigating gardens and orchards. Land drainage/dewatering. Water supply systems. Industrial applications.

OPERATING CONDITIONS:

- Maximum liquid temperature 35°C
- Maximum ambient temperature 35°C
- · Class B/F Insulation
- · Operating mode continuous
- Protection IP68

MATERIALS:

- Inlet/outlet: stainless steel AISI 304
- · Housing: stainless steel AISI 304
- · Shaft and rotor: stainless steel AISI 304
- Impeller: stainless steel AISI 304
- · Venturi tube: stainless steel AISI 304
- Mechanical seal: Ceramics/Sic/NBR
- Motor: oil cooling
- Rotational speed of the electric motor: 2850RMP

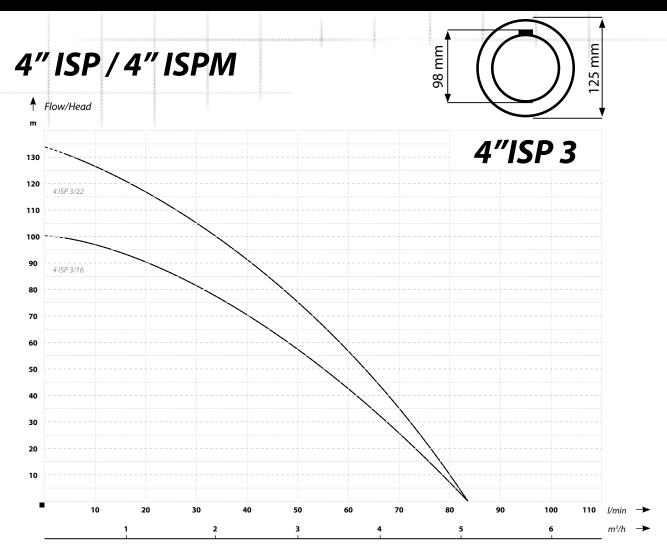

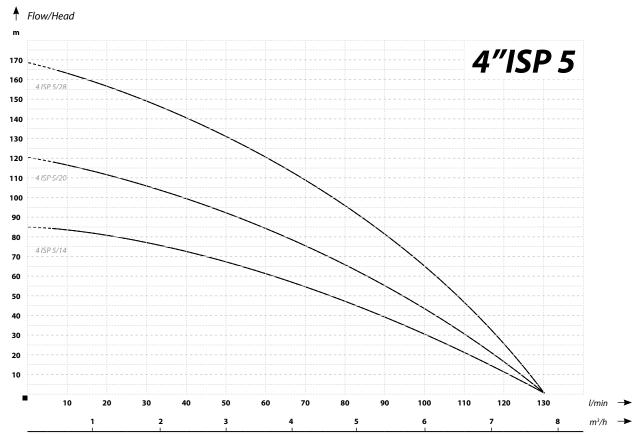

Depending on the production batch, the device parameters may differ from the data provided in the table

4" ISP / 4" ISPM

IBQ HIGH SPEED DEEP WELL PUMPS

IBQ multi-stage centrifugal deep well pumps are designed for operation in drilled wells and open water reservoirs. Unlike other deep well pumps, the IBQ have advanced energy-saving motors with permanent magnets and a frequency converter. As a result, the motor achieves 6000 rpm and a very high performance.

Motor design with permanent magnets and an inverter has many advantages over traditional pumps. These include:

- Energy saving due to high performance of the motor and pump. By achieving the same hydraulic parameters of pressure and performance, the IBQ pumps can be used with motor that are approximately 15-20% smaller than motors used in traditional pumps.
- Dry-running protection. The inverter electronics control the motor current draw. When dry run specific
 draw is detected, the motor is stopped. After a certain period of time, the pump tries to automatically
 restart, and its operation will continue after inflow is restored.
- Soft start resulting in no negative effect of hydraulic shock on the hydraulic system, significantly reduced mechanical wear of the motor and pump, no impact of inrush current on the electricity network.
- In traditional solutions, in order to achieve constant motor operating parameters, rapid starting is required. During starting, the motor draws a multiple of normal operating current during the first few seconds of operation (inrush current). This may result in voltage fluctuations in the electricity network affecting operation of other devices connected to this network, blown fuses, and burning of electrical connections in control units. Usually, hydraulic parameters of the pump are during starting instantaneously higher than nominal, which means that in the first seconds of operation water with higher parameters (pressure, flow) than nominal, designed for a given network is pumped into the system. This is called hydraulic shock leads to excessive wear of hydraulic components of the water supply system. Another disadvantage eliminated by soft start is the wear and tear of motor's mechanical and electrical components. Hydraulic shocks increase the mechanical load on the motor and pump, and the high inrush current weakens the internal insulation of the motor.
- The motors can operate with relatively high voltage fluctuations 160-250V for single-phase motors, 320-450V for three-phase motors.
- Due to the smaller size of IBQ pumps compared to traditional pumps, drilling and installation costs are considerably lower.

APPLICATION:

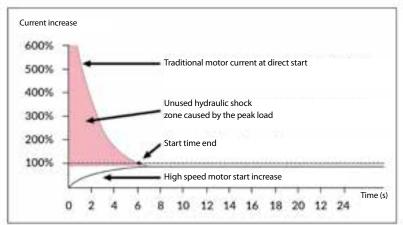

Supply of water to single-family houses and farms from deep well intakes. Irrigating gardens and orchards. Land drainage/dewatering. Water supply systems. Industrial applications.

OPERATING CONDITIONS:

- Maximum liquid temperature 35°C
- Maximum ambient temperature 35°C
- Class F Insulation
- Operating mode continuous
- Protection IP68

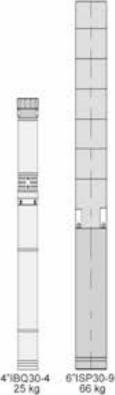

MATERIALS:

- Inlet/outlet: stainless steel AISI 304
- Housing: stainless steel AISI 304
- Shaft and rotor: stainless steel AISI 304
- · Impeller: noryl
- Venturi tube: noryl
- Mechanical seal: Ceramics/Sic/NBR
- · Motor: oil cooling / with inverter
- Rotational speed of the electric motor: 6000RMP

The illustration shows two pumps with the same parameters - IBQ, and a traditional ISP. Both pumps are shown in the same scale.

6" STAINLESS STEEL MULTI-STAGE DEEP WELL PUMPS

6" ISPSTAINLESS STEEL PUMPS

Stainless steel multi-stage deep well pumps with diameters of up to 145 mm, designed for pumping water with up to 0.3% sand content from a minimum 6"(150 mm) wells. Robust stainless steel design provides long-term and reliable operation.

The pumps are available with 4 and 6 inch IBO or IBO ITALY motors. Depending on customer requirements, connected IBO ITALY motors can be oil- or water-cooled.

Due to the proven design and very high parameters compared to the diameter of the pumps, they can be used in a very wide range of applications, from supplying water to large farms to industrial solutions.

APPLICATION:

Supply of water to large farms from deep water intakes, garden and orchard irrigation, shrubs and tree nurseries, land drainage/dewatering. water supply systems, industrial applications.

OPERATING CONDITIONS:

- Maximum liquid temperature 35°C
- Maximum ambient temperature 35°C
- Class B/F Insulation
- · Operating mode continuous
- Protection IP68

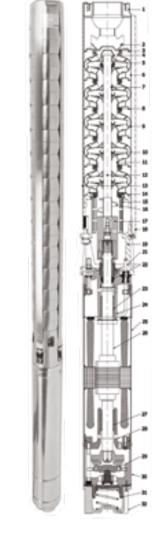

MATERIALS:

- Inlet/outlet: stainless steel AISI 304
- Clutch, tie rods and cable protector: stainless steel AISI 304
- Housing: stainless steel AISI 304
- Shaft and rotor: stainless steel AISI 304
- Impeller: stainless steel AISI 304
- Venturi tube: stainless steel AISI 304
- Mechanical seal: Ceramics/Sic/NBR
- Motor: oil/water cooling
- · Rotational speed of the electric motor: 2850RMP

ITALIAN STAINLESS STEEL DEEP WELL PUMPS WITH DRY RUN PRO TECHNOLOGY

Due to the DRY RUN PRO technology, the FP4 pumps have increased resistance to seizure in case of dry running operation. The design and materials

used make the pump suitable for pumping water for food processing purposes. The pump has been properly certified. Pumps in A. B. D. E

sizes are equipped with radial impellers and $1\frac{1}{4}$ " outlets while pumps in F, H, L sizes have semi-axial impellers and 2" outlets.

All pumps are supplied with built-in check valves. The maximum outer diameter of the pump including cable protector is 98 mm. The pump is suitable for vertical and horizontal operation.

The FP4 pumps can be used in households and on farms, in water supply systems, irrigation systems, fire extinguishing systems and industrial applications.

The FP4 deep well pumps has been manufactured in the innovative DRY RUN PRO technology by the leading Italian manufacturer of deep well pumps. They are very robust, compact and reliable. The inlet and outlet body

sections are made of AISI 304 stainless steel made by lost-wax technique, which guarantees high chemical resistance in contact with water, as well as product reliability. The pumps design is based on floating rotors moving independently in the Venturi tube chambers.

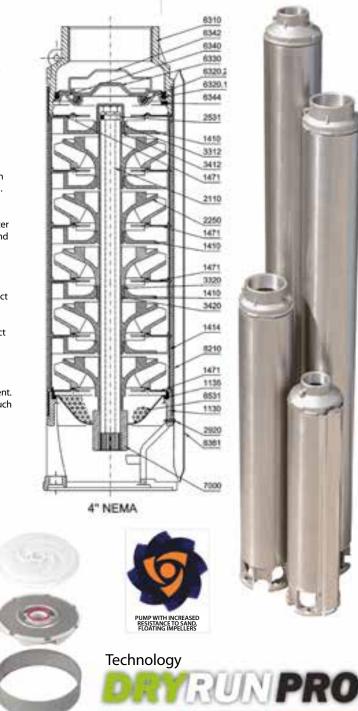

Due to the innovative design, it is protected by a European patent. This solution guarantees that pumps have unique properties, such as reliable operation in dry running conditions.

OPERATING CONDITIONS:

- Maximum liquid temperature 35°C
- Maximum ambient temperature 35°C
- Class F Insulation
- Operating mode continuous
- Protection IP68

MATERIALS:

- Inlet/outlet: stainless steel AISI 304
- Non-return valve: stainless steel AISI 304
- · Housing: stainless steel AISI 304
- Shaft and rotor: stainless steel AISI 304
- Venturi tube cover: stainless steel AISI 304
- · Venturi tube: PA
- · Impeller: PA
- Sliding sleeve: Al203
- Clutch: stainless steel AISI 316L
- Mechanical seal: Ceramics/Sic/NBR
- · Motor: oil cooling
- · Rotational speed of the electric motor: 2850RMP

IBO ITALY AP6 F

ITALIAN STAINLESS STEEL DEEP WELL PUMPS

Following the FP4 series, the AP6 pumps intended for 6-inch wells are another very successful design of the leading Italian pump manufacturer. Their high quality and reliable design created by Italian engineers ensures long-term and faultless operation. High quality inlet and outlet castings are made of AISI 304 stainless steel. The pumps are equipped with 3 inch diameter outlets and a built-in check valve. Pumps with dedicated 5.5 kW motors have NEMA standard inlets designed for connecting 4-inch motors. Pumps with 7.5 kW motors have inlets designed for connecting 6-inch motors. The maximum outer diameter including cable protector is 144 mm. The pump shaft rotates anticlockwise when viewed at the outlet from above. The water surface should not be lower than 1 m above the inlet. The pump is suitable for vertical and horizontal operation. The AP6 pumps can be used in households and on farms, in water supply systems, irrigation systems, fire extinguishing systems and industrial applications.

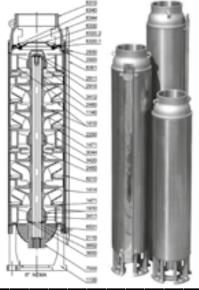

OPERATING CONDITIONS:

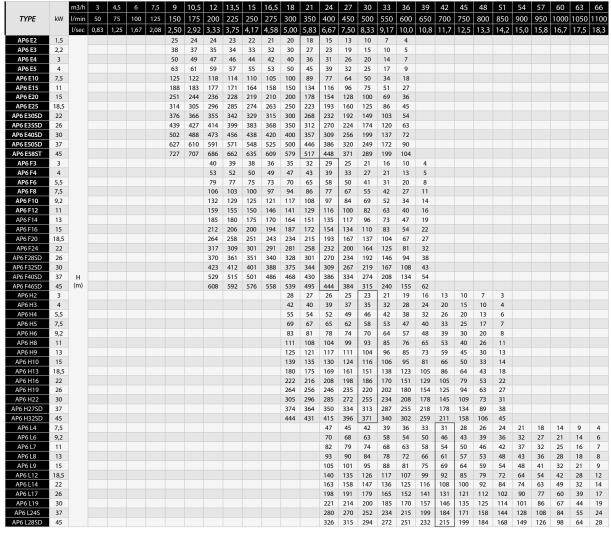

- Maximum liquid temperature 35°C
- Maximum ambient temperature 35°C
- Class F Insulation
- · Operating mode continuous
- Protection IP68

MATERIALS:

- Inlet/outlet: stainless steel AISI 304
- Non-return valve: stainless steel AISI 304
- Housing: stainless steel AISI 304
- · Shaft and rotor: stainless steel AISI 304
- Venturi tube cover: stainless steel AISI 304
- · Venturi tube: PA

IBO ITALY FX6 / FX8 / FX10

Top quality cast iron deep well pumps made in Italy. Pump hydraulic components are made of cast iron, and upon customer's request brass impellers can be installed. The pump has 5"diameter outlet (DN 125), and depending on the user's requirements, it can be threaded or flanged. For pumps up to 26 kW, 6 "(144 mm) motors are mounted, for 8" pumps over 26 kW, 8 "(193 mm) motors are mounted. Maximum pump diameter including cable protector is: for 6" pumps – 153mm, 8" pumps – 193 mm, 10" pumps – 245mm.

Pumps are available on request, delivery time from 7 to 21 days.

APPLICATION:

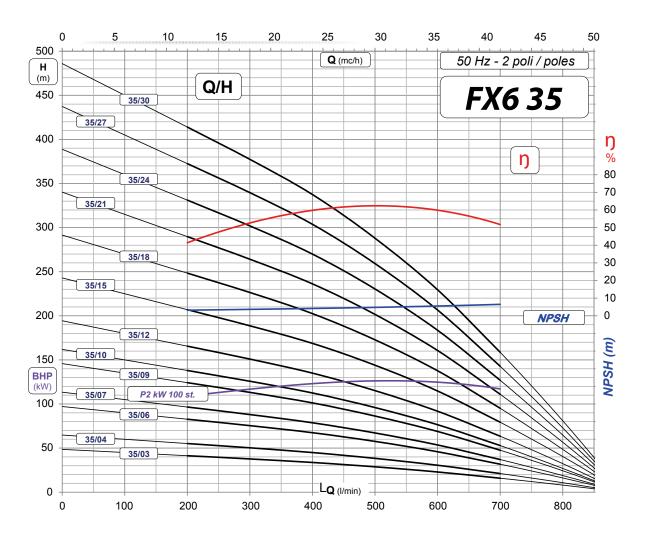

- farms,
- · water supply systems,
- · irrigation systems,
- · fire extinguishing systems,
- · industrial applications.

6IMW IBO ITALY
8IWM ITALY
10IWM ITALY

3"/4" / 6" IBO DEEP WELL OIL-FILLED MOTORS

High-quality, 3, 4, 6 inch diameter deep well oil-filled motors manufactured to NEMA standard

Top quality materials used to manufacture the motors guarantee their long-term and reliable operation. High mechanical resistance and very good electrical properties. Maximum diameter of motors: 3'' - 75 mm / 4'' – 98 mm / 6'' – 145 mm.

OUTER CASING AND BASEPLATE:

Made of AISI 304 stainless steel.

UPPER BEARING RETAINER:

Durable cast iron protected with AISI 304 stainless steel cover. The outer tube is secured by 4 bolts.

MECHANICAL SEAL:

Graphite/ceramics.

BALL BEARINGS:

Properly sized to ensure the motor's long lifespan.

STATOR

The design provides maximum electrical efficiency. Filled with white, highly refined mineral oil.

SHAFT:

The outer part of the shaft and the splines are made of AISI 304 stainless steel, which provides excellent corrosion resistance and high mechanical resistance required under high dynamic loads.

CABLE GLAND:

The design of the gland prevents the ingress of motor oil into the cable's outer sheath.

100% TESTED:

All engines are tested at the end of the production process. Tests include electrical and mechanical properties, and tightness tests.

Depending on the production batch, the device parameters may differ from the data provided in the table

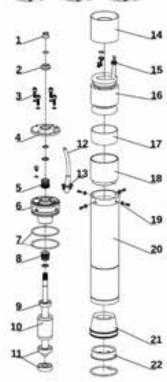

M PARAMETERS

| Name | Power (kW) | Voltage (V/Hz) | Thrust load (N) | Weight (kg) | Amperage (A) |
|---------|---------------|------------------------------|--------------------|----------------|--------------|
| 3"0,55 | 0,55 | 1 ~ 230/50 | 1000 | 8 | 4,2 |
| 3"0,75 | 0,75 | 1 ~ 230/50 | 1500 | 8,5 | 5,4 |
| 3"1,1 | 1,1 | 1 ~ 230/50 | 1500 | 9,5 | 7,7 |
| 4" 0,75 | 0,75 | 1 ~ 230/50 lub 3 ~ 400/50 | 1500 | 9,5 | 6,5/3,1 |
| 4" 1,1 | 1,1 | 1 ~ 230/50 lub 3 ~ 400/50 | 1500 | 10,8 | 8,5/4,0 |
| 4" 1,5 | 1,5 | 1 ~ 230/50 lub 3 ~ 400/50 | 1500 | 12,5 | 10,5/5,0 |
| 4"2,2 | 2,2 | 1 ~ 230/50 lub 3 ~ 400/50 | 1500 | 13,9 | 15,5/6,3 |
| 4"3 | 3 | 3 ~ 400/50 | 2500 | 14,8 | 7,2 |
| 4"4 | 4 | 3 ~ 400/50 | 2500 | 18 | 9,2 |
| 4"5,5 | 5,5 | 3 ~ 400/50 | 2500 | 22 | 12,9 |
| 4"7,5 | 7,5 | 3 ~ 400/50 | 2500 | 28 | 18,5 |
| 6"7,5 | 7,5 | 3 ~ 400/50 | 5500 | 38 | 17,5 |
| 6"9,2 | 9,2 | 3 ~ 400/50 | 5500 | 42 | 21,5 |
| 6"11 | 11 | 3 ~ 400/50 | 10000 | 47 | 24,5 |
| 6"13 | 13 | 3 ~ 400/50 | 10000 | 52 | 27,5 |
| 6" 15 | 15 | 3 ~ 400/50 | 10000 | 58 | 31,5 |

TECHNICAL DATA:

- · Rotational speed: 2850 RPM
- Ingress Protection: IP 68
- Winding insulation class: B / F
- Maximum immersion depth: 100 m
- Maximum number of motor starts: 20 times per hour
- Permissible voltage fluctuation: + 6 % / 10 %
- Maximum water temperature: 35°C
- · Cooling oil used: non-toxic oil

4" ITALIAN DEEP WELL MOTORS 4IOM ITALY - OIL

4" diameter Italian deep well oil-filled motors. High-quality original Italian materials, demanding tests at every stage of manufacturing process, and the expertise of Italian engineers guarantee high mechanical resistance and very good electrical properties of the product. Power cable terminated with removable cable gland provides excellent tightness. Motors diameter: 4" - 95 mm.

OUTER CASING AND BASEPLATE: Made of AISI 304 stainless steel. Outer tube made of AISI 304L (low carbon) steel for greater corrosion protection at the welded joints.

UPPER BEARING RETAINER: Cast iron treated by means of cataphoresis (4 inch motors are additionally protected with AISI 304 stainless steel cover).

MECHANICAL SEAL: Graphite/ceramics standard version or SIC-SIC (silicon carbide/silicon carbide)

BALL BEARINGS: Properly sized to ensure the motor's long lifespan.

STATOR: Special design for maximum electrical efficiency. Filled with white, highly refined mineral oil approved for use in contact with drinking water (F.F.A. approval)

SHAFT: The inner part of the rotor is made of carbon steel alloy in order to improve the electrical properties of the motor. The outer part of the shaft and the splines are made of DUPLEX stainless steel. Such combination provides excellent corrosion resistance and high mechanical resistance required under high dynamic loads.

REMOVABLE CABLE GLAND: It provides perfect sealing under the toughest conditions and makes it easier to remove cable for maintenance purposes. Power cable is terminated with a removable cable gland for perfect sealing. Power cable is compliant with main drinking water quality standards (KTW, ACS, WRAS)

100% TESTED: All motors are tested at the end of the manufacturing process. Tests include electrical and mechanical properties, and tightness tests.

TECHNICAL DATA:

- Rotational speed: 2850 RPM
- Ingress Protection: IP 68
- Winding insulation class: F
- Maximum immersion depth: 200 ${\bf m}$
- Maximum number of motor starts: 30 times per hour
- Permissible voltage fluctuation: + 10 % / 10 %
- Maximum water temperature: 35°C
- Cooling oil used: non-toxic oil
- Installation: horizontal / vertical
- · Can be used with inverters.

6" ITALIAN DEEP WELL MOTORS 6IOM ITALY - OIL

MOTORS FOR 6"WELLS OR LARGER.

High-quality original Italian materials, demanding tests at every stage of manufacturing process, and the expertise of Italian engineers guarantee high mechanical resistance and very good electrical properties of the product. All components that coin contact with water are made of AISI 304 stainless steel. Power cable terminated with removable cable gland provides excellent tightness. **PRODUCT FEATURES:**

OUTER CASING AND BASEPLATE: made of AISI 304 stainless steel Outer tube made of AISI 304L (low carbon) steel for greater corrosion protection at the welded joints.

UPPER BEARING RETAINER: cast iron treated by means of cataphoresis, protected with AISI 304 stainless steel cover. Secured to the outer tube with 8 bolts.

MECHANICAL SEAL: graphite/ceramics standard version: SIC-SIC (silicon carbide/silicon carbide). Special versions on request.

BALL BEARINGS: properly sized to ensure the motor's long lifespan.

STATOR: Special design for maximum electrical efficiency. Filled with white, highly refined mineral oil approved for use in contact with drinking water (F.F.A. approval).

REMOVABLE CABLE GLAND: it provides perfect sealing under the toughest conditions and makes it easier to remove cable for maintenance purposes. The design of the gland prevents the ingress of motor oil into the cable's outer sheath. Power cable is compliant with main drinking water quality standards (KTW, ACS, WRAS).

SHAFT: the inner part of the rotor is made of carbon steel alloy to improve the electrical properties of the motor. The outer part of the shaft and the splines are made of DUPLEX stainless steel. Such combination provides excellent corrosion resistance and high mechanical resistance required under high holding torque.

100% TESTED: all motors are tested at the end of the manufacturing process. Tests include electrical and mechanical properties, and tightness tests.

TECHNICAL DATA:

- Rotational speed: 2850 RPM
- Ingress Protection: IP 68
- Winding insulation class: F
- Maximum immersion depth: 200 m
- Maximum number of motor starts: 30 times per hour
- Permissible voltage fluctuation: + 10 % / 10 %
- Maximum water temperature: 35°C
- · Cooling oil used: non-toxic oil
- Installation: horizontal / vertical
- Can be used with inverters.

6" ITALIAN WATER-COOLED DEEP WELL MOTORS

MOTORS FOR 6" WELLS OR LARGER.

High quality 6 "water-cooled motors made in Italy under the IBO ITALY brand. Their durable design guarantees long-term operation without the need for any maintenance. High-quality original Italian materials, demanding tests at every stage of manufacturing process, and the expertise of Italian engineers guarantee high mechanical resistance and very good electrical properties of the product.

PRODUCT FEATURES:

OUTER CASING AND BASEPLATE: Outer tube made of AISI 304L (low carbon) steel for greater corrosion protection at the welded joints. The baseplate is made of cast iron.

UPPER BEARING RETAINER: cast iron treated by means of cataphoresis.

MECHANICAL SEAL: graphite/ceramics standard version: SIC-SIC (silicon carbide/silicon carbide). Special versions on request.

BALL BEARINGS: properly sized to ensure the motor's long lifespan.

STATOR: special design for maximum electrical efficiency. It can be rewound. Cooling is provided by water. The winding is Class Y insulated.

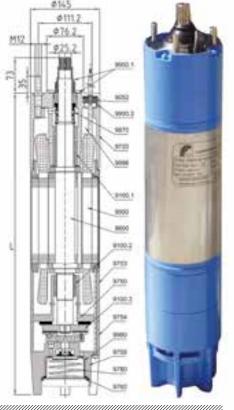

SHAFT: the inner part of the rotor is made of carbon steel alloy to improve the electrical properties of the motor. The outer part of the shaft and the splines are made of DUPLEX stainless steel. Such combination provides excellent corrosion resistance and high mechanical resistance required under high holding torques.

100% TESTED: all motors are tested at the end of the manufacturing process. Tests include electrical and mechanical properties, and tightness tests.

TECHNICAL DATA:

- · Rotational speed: 2850 RPM
- Ingress Protection: IP 68
- Winding insulation class: F
- Maximum immersion depth: 100 m
- Maximum number of motor starts: 20 times per hour
- Permissible voltage fluctuation: +5% / -5%
- Maximum water temperature: 30°C
- Cooling liquid: water
- Installation: horizontal / vertical
- · Can be used with inverters.

8" DEEP WELL WATER-COOLED MOTORS 8IWM ITALY

High quality 8" water-cooled motors made in Italy under the IBO ITALY brand. Their durable design guarantees long-term operation without the need for any maintenance.

PRODUCT FEATURES

OUTER CASING AND BASEPLATE: Outer tube made of AISI 304L steel for greater corrosion protection at the welded joints. The baseplate is made of cast iron.

UPPER BEARING RETAINER: G25 cast iron

MECHANICAL SEAL: standard version: SIC-NBR-AISI304

BALL BEARINGS: carbon graphite, properly sized to ensure the motor's long lifespan.

STATOR: Special design for maximum electrical efficiency. It can be rewound. Cooling is provided by water. The winding is Class Y insulated.

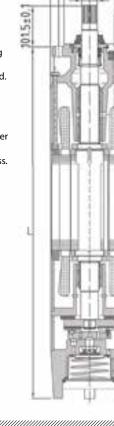

SHAFT: the inner part of the rotor is made of carbon steel alloy to improve the electrical properties of the motor. The outer part of the shaft and the splines are made of DUPLEX stainless steel. Such combination provides excellent corrosion resistance and high mechanical resistance required under high holding torque.

100% TESTED: all motors are tested at the end of the manufacturing process. Tests include electrical and mechanical properties, and tightness tests.

TECHNICAL DATA:

- · Rotational speed: 2850 RPM
- Ingress Protection: IP 68
- · Winding insulation class: Y
- Maximum immersion depth: 100 m
- Maximum number of motor starts: 7 times per hour
- Permissible voltage fluctuation: + 10 % / 10 %
- Maximum water temperature: 30°C
- Cooling liquid: water
- Maximum flow: 0.5 m/s
- Installation: vertical
- Can be used with inverters.

10" DEEP WELL WATER-COOLED MOTORS 10| WM ITALY

MOTORS FOR 10" WELLS OR LARGER.

Top-quality original Italian materials, demanding tests at every stage of manufacturing process, and the expertise of Italian engineers guarantee high mechanical resistance and very good electrical properties of the product. All components that come in contact with water are made of AISI 304 stainless steel. Power cable terminated with removable cable gland provides excellent tightness.

PRODUCT FEATURES

OUTER CASING AND BASEPLATE: made of AISI 304 stainless steel Outer tube made of AISI 304L (low carbon) steel for greater corrosion protection at the welded joints.

UPPER BEARING RETAINER: cast iron treated by means of cataphoresis, protected with AISI 304 stainless steel cover. Secured to the outer tube with 8 holts

MECHANICAL SEAL: graphite/ceramics standard version: SIC-SIC (silicon carbide/silicon carbide). Special versions on request.

BALL BEARINGS: properly sized to ensure the motor's long lifespan. STATOR: Special design for maximum electrical efficiency. Filled with white, highly refined mineral oil approved for use in contact with drinking water (F.F.A. approval)

REMOVABLE CABLE GLAND: it provides perfect sealing under the toughest conditions and makes it easier to remove cable

for maintenance purposes. The design of the gland prevents the ingress of motor oil into the cable's outer sheath. Power cable is compliant with main drinking water quality standards (KTW, ACS, WRAS).

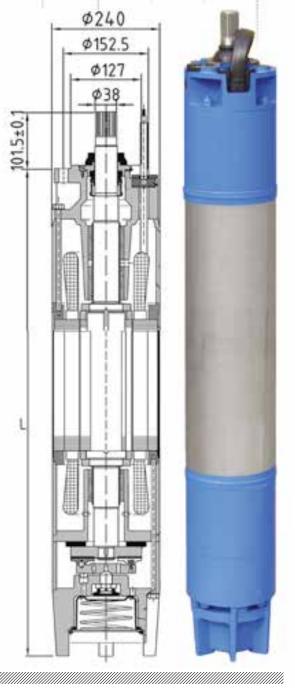

SHAFT: the inner part of the rotor is made of carbon steel alloy to improve the electrical properties of the motor. The outer part of the shaft and the splines are made of DUPLEX stainless steel. Such combination provides excellent corrosion resistance and high mechanical resistance required under high holding torque.

100% TESTED: all motors are tested at the end of the manufacturing process. Tests include electrical and mechanical properties, and tightness tests.

TECHNICAL DATA:

- Rotational speed: 2850 RPM
- Ingress Protection: IP 68
- Winding insulation class: F
- Maximum immersion depth: 100 m
- Maximum number of motor starts: 5 times per hour
- Permissible voltage fluctuation: + 10 % / 10 %
- Maximum water temperature: 25°C
- Cooling liquid: water
- Maximum flow: 0.5 m/s
- Installation: vertical
- Can be used with inverters.

PRESSURE TANKS HORIZONTAL / HORIZONTAL WITH PRESSURE GAUGE

The 24-150 horizontal pressure tanks for storing water in water supply systems. IBO pressure vessels are used to stabilize water pressure and increase the live volume of water supply systems. Designed to operate with pumps with parameters matching the tank parameters. The tanks are made of thick carbon steel and coated with a special anti-corrosion varnish. There are EPDM rubber diaphragms inside the tanks creating a membrane between the water inside it and the outer jacket of the tank. Compressed air between the membrane and the tank body releases water from the tank under pressure. By using tanks in booster sets, the number of pump starts in a given period of time can be limited, which results in the extended lifespan of the entire system. Additionally, 50 and 100 tank models are available with a built-in pressure gauge. The volume of water inside the tank is the difference between the tank body volume and the volume of air around the membrane.

The tanks are equipped with a special valve for filling or releasing air from the tank - the same valve as the one used in car tyres is located at the rear of the tank, under the cover.

IBO pressure vessels are pressure equipment compliant with requirements of Directive 2014/68/EU.

APPLICATION:

Connected with surface or deep-well pumps, they create booster sets for supplying water to allotments, single and multi-family houses, farms and enterprises from their own intakes.

/// PARAMETERS

| MODEL | Inlet/outlet (inch) | Operating temperature (°C) | Max. tested PT pressure (bar) | Precharge pressure (bar) | Dimension D (mm) | Dimension H (mm) |

STAINLESS STEEL INOX HORIZONTAL PRESSURE TANKS

The 24 - 100 horizontal pressure tanks made of AISI 304 stainless steel for storing water in water supply systems. Tank jacket and flange are made of stainless steel. IBO pressure vessels are used to stabilize water pressure and increase the live volume of water supply systems. Designed to operate with pumps with parameters matching the tank parameters. Due to the stainless steel finish, the tanks can be installed in wells and wet rooms without the risk of early corrosion. There are EPDM rubber diaphragms inside the tanks creating a membrane between the water inside it and the outer jacket of the tank. Compressed air between the membrane and the tank body releases water from the tank under pressure. By using tanks in booster sets, the number of pump starts in a given period of time can be limited, which results in the extended lifespan of the entire system. Additionally, the 50 and 100 tank models are available with a built-in pressure gauge. The volume of water inside the tank is the difference between the tank body volume and the volume of air around the membrane.

The tanks are equipped with a special valve for filling or releasing air from the tank - the same valve as the one used in car tyres is located at the rear of the tank, under the cover.

IBO pressure vessels are pressure equipment compliant with requirements of Directive 2014/68/EU.

Connected with surface or deep-well pumps, they create booster sets for supplying water to allotments, single and multi-family houses, farms and enterprises from their own intakes

| MODEL | Inlet/outlet (inch) | Operating temperature (°C) | Max. tested PT pressure (bar) | Precharge pressure (bar) | Dimension D (mm) | Dimension H (mm) |

| HORIZONTAL INOX PRESSURE TANK TYPE 24 | 1 | 0 - 60 | 8 | 1,7 +/- 10% | 300 | 450 |
| HORIZONTAL INOX PRESSURE TANK TYPE 50 | 1 | 0 - 60 | 8 | 1,7 +/- 10% | 380 | 530 |
| HORIZONTAL INOX PRESSURE TANK TYPE 80 | 1 | 0 - 60 | 8 | 1,7 +/- 10% | 470 | 590 |
| HORIZONTAL INOX PRESSURE TANK TYPE 100 | 1 | 0 - 60 | 8 | 1,7 +/- 10% | 480 | 670 |

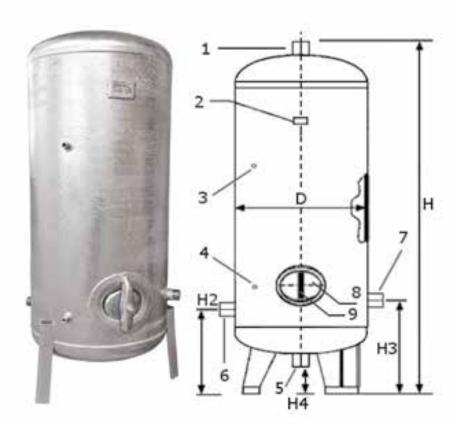

GALVANIZED TANKS

Corrosion-resistant vertical air-over-water tanks made of zinc-coated low-carbon sheet metal. Tank jacket and flange are made of galvanized steel. Galvanized tanks are designed to stabilize water pressure and increase the live volume of water supply systems. Designed to operate with pumps with parameters matching the tank parameters. Due to the galvanized steel finish, the tanks can be installed in wells and wet rooms, and even externally without the risk of early corrosion. The tanks are available in capacity from 100 to 2000 litres. Maximum permissible pressure in the tank is 6 bar. Our offer also includes fittings for galvanized tanks.

APPLICATION:

Water storage. In combination with surface or deep-well pumps used to supply water to single and multi-family houses, farms and in industrial $applications. \ As the only \ tanks, air-over-water \ tanks \ are suitable for installation in \ water \ supply \ systems \ with \ block \ filters \ and \ where \ additional$ water oxygenation is required.

IBO ITALY PRESSURE TANKS

High-quality original materials, demanding tests at every stage of manufacturing process, and the expertise of engineers guarantee high resistance to wear. The 24L - 100L horizontal and 150L - 10000L vertical pressure tanks for storing water in water supply systems. IBO ITALY PRZEPONA pressure vessels are used to stabilize water pressure and increase the live volume of water supply systems. Designed to operate with pumps with parameters matching the tank parameters. The tanks are made of thick carbon steel and coated with a special anti-corrosion varnish. There are EPDM rubber diaphragms (manufactured in Italy) inside the tanks creating a membrane between the water inside it and the outer jacket of the tank. Compressed air between the membrane and the tank body releases water from the tank under pressure. By using tanks in booster sets, the number of pump starts in a given period of time can be limited, which results in the extended lifespan of the entire system. Tank volume refers to the body size - the volume of water inside the tank is the difference between the tank body volume and the volume of air around the membrane.

The tanks are equipped with a special valve for filling or releasing air from the tank - the same valve as the one used in car tyres is located at the rear of the tank, under the cover.

IBO pressure vessels are pressure equipment compliant with requirements of Directive 2014/68/EU.

APPLICATION:

Connected with surface or deep-well pumps, they create booster sets for supplying water to allotments, single and multi-family houses, farms and enterprises from their own intakes.

IBO ITALY CWU PRESSURE VESSELS

High-quality original materials, demanding tests at every stage of manufacturing process, and the expertise of engineers guarantee high resistance to wear. IBO CWU 8L-50L expansion vessels for hot and cold drinking water supply systems, designed to maintain and stabilize the system pressure changes resulting from the increase in water volume. The tanks are made of thick carbon steel and coated with a special anti-corrosion varnish. There are rubber diaphragms (manufactured in Italy) inside the tanks creating a membrane between the water inside it and the outer jacket of the tank. The long-lasting maximum liquid operating temperature is 110°C, and up to 130°C for a period of 2 hours. The tanks are equipped with a special valve for filling or releasing air from the tank - the same valve as the one used in car tyres is located at the rear of the tank, under the cover.

- The outer surface is coated with epoxy powder paint.
- IBO pressure vessels are pressure equipment compliant with requirements of Directive 2014/68/EU
- The vessels can be used with mixtures of ethylene or propylene glycol.
- They have very low gas permeability

APPLICATION:

In hot and cold drinking water supply system to maintain and stabilize the system pressure changes resulting from the increase in water volume.

IBO ITALY SOLAR DIAPHRAGM EXPANSION VESSELS

High-quality original materials, demanding tests at every stage of production and the expertise of engineers ensure high resistance to wear. IBO Solar diaphragm expansion vessels with capacities of 8L-50L are designed for use in solar installations in order to maintain and equalise pressure in them, changes of which result from an increase in water volume. The tanks are made of thick carbon steel and coated with a special anti-corrosion varnish. Inside the tanks there are rubber diaphragms made of EPDM (made in an Italian factory) forming a membrane between the water inside and the outer shell of the tank.

The long-term maximum working temperature of the fluid is 110°C and up to two hours even 130°C. The tanks use a special valve for adding or draining air from the tank - a valve identical to that in car wheels, located in the rear part of the tank, under the cover.

- External surface with epoxy powder paint
- $\bullet \ \ \text{IBO diaphragm expansion vessels are pressure equipment complying with the requirements of Directive 2014/68/EU$
- Suitable for use with ethylene or propylene glycol mixtures
- · Characterised by very low gas permeability

APPLICATION:

In hot and cold potable water systems to maintain and equalise the pressure in the water, the variations of which are caused by the increase in water volume.

IBO HEATS PRESSURE VESSELS FOR CENTRAL HEATING SYSTEMS

IBO HEATS pressure vessels are designed for heating and solar systems to maintain and stabilize the system pressure changes resulting from the increase in fluid volume and temperature.

The main function of pressure vessels is to prevent excessive pressure increase in closed systems.

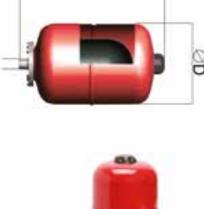

Pressure vessels use air cushion to compensate for changes of the heating medium volume in closed circuits. Inside the steel vessel there is a replaceable EPDM (synthetic rubber) membrane with high tensile strength and high temperature resistance, separating the liquid from the air. The tanks are equipped with a pressure valve to regulated the pressure inside the vessel and a replaceable flange made of galvanized steel with 3/4" inlet/outlet connection.

The vessels are intended for systems with the maximum 50% glycol content. Vessels for suspension: 8L / 12L / 19L / 24L Free-standing vessels: 36L / 50L / 80L / 100L

IBO HEATS pressure vessel are compliant with the Pressure Equipment Directive (PED) 2014/68/UE of the European Parliament and of the Council, as amended.

MAGI 2

Energy-saving electronic circulation pumps which meet the requirements of A-rated pumps.

EEI<=0,23

which according to the Commission Regulation (EU) No. 622/2012 is the reference criterion for: the most energy-efficient circulation pumps.

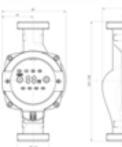

The MAGI series circulation pump is equipped with a permanent magnet motor and a differential pressure controller which automatically and continuously adjusts the pump performance to meet the actual needs of the system. The pump control panel is placed on the top of the motor, which makes it easy to operate by the user. The current consumption of electricity is displayed on its dial. The pump set includes a set of screw connections with an adapter for connecting the cable.

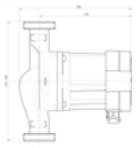

- The pump has 8 operating modes:
- AUTO (factory default)
 - High to low proportional pressure
 - characteristic curve
- LPP / HPP Proportional pressure curves
- LCP / HCP Constant pressure curves
- I/II/III Constant speed curves.

APPLICATION:

The MAGI series circulation pump is best suited for the following systems:

- Equithermic heating systems with variable flow
- · Heating systems with variable pipeline temperature
- · Heating systems with night mode
- Air conditioning systems
- Industrial circulation systems
- Home central heating systems and home hot water systems

MAGI MAX

Energy-saving electronic circulation pumps with A energy-efficiency rating.

Energy Efficiency Index for MAGI pumps is:

EEI<=0,23

The MAGI circulating pump is equipped with a permanent magnet motor and a pressure differences regulator for automatic and continuous pump capacity adjustment to the actual requirements of the system. The pump control panel is located on top of the motor for easier operation by the user. Current power consumption is displayed

The pump is supplied with union joints and cable adapter.

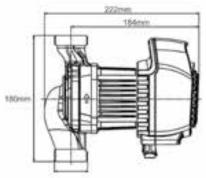

- ECO (factory setting)
 - From highest to lowest proportional pressure characteristic curve
- PP2/PP3/PP4/PP5 Proportional pressure curves
 CP2/CP3/CP4/CP5 Constant pressure curves.

APPLICATION:

Magi circulation pump is intended for the following systems:

- Constant temperature variable flow heating system
- Variable pipe temperature heating system
- Heating system with night mode
- Air conditioning system
- Industrial circulation system
- Domestic central heating system and domestic hot water system.

AMG

Energy-saving electronic circulation pumps which meet the requirements of A-rated pumps.

PWM CONTROL

The energy efficiency index of pumps from the AMG series is:

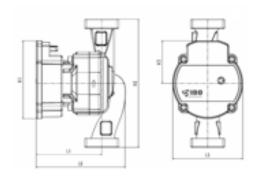

EEI<=0.20

The pumps are designed to force circulation in systems equipped with an electronic processor, which automatically controls the operation of the pumps. This feature, in combination with a frequency converter, allows for significant savings in electricity consumption. This solution is used in central heating and solar installations. The equipped processor enables the pump to choose one of 8 modes of operation as needed per installation. The power consumption is from 1/10 to 1/3 lower than in classic pumps. The pump set includes a set of screw connections and a power cord

APPLICATION:

The AMG series circulation pump is best suited for the following systems:

- Equithermic heating systems with variable flow
- Heating systems with variable pipeline temperature
- Heating systems with night mode
- Air conditioning systems
- Industrial circulation systems
- Home central heating systems and home hot water systems

NOVA

Energy-saving electronic circulation pumps with A energy-efficiency rating

Energy Efficiency Index for NOVA pumps is

EEI<=0,23

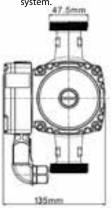

The NOVA circulating pump is equipped with a permanent magnet motor and a pressure differences regulator for automatic and continuous pump capacity adjustment to the actual requirements of the system. The pump control panel is located on top of the motor for easier operation by the user. Current power consumption is displayed on its panel. The pump is supplied with union joints and cable adapter.

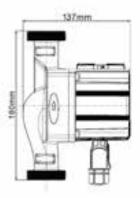

The pump provides 8 operating modes:

- AUTO (factory setting)
 - From highest to lowest proportional pressure
 - characteristic curve
- BL1 / BL2
- Proportional pressure curves
- HD1 / HD2 HS1/HS2/HS3
- Constant pressure curves - Constant rotational speed curves

APPLICATION:

- Constant temperature variable flow heating system
- Variable pipe temperature heating system
- Heating system with night mode
- Air conditioning system
- Industrial circulation system
- Domestic central heating system and domestic hot water system.

NOVA MAX

Energy-saving electronic circulation pumps that meet the requirements for A class pumps.

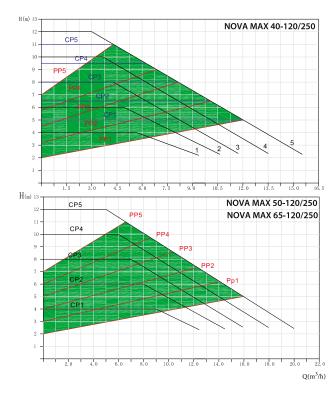

The NOVA circulation pump is fitted with a permanent magnet motor and differential pressure controller that automatically and continuously adjusts the pump capacity to meet the actual needs of the system. The pump control panel is placed on the top of the motor for easy operation by the user. Its dial displays the current electricity consumption. A set of threaded unions is supplied with the pump, including an adapter for cable connection

- The pump features 16 operation modes:
- AUTO (factory setting)
- The curve of proportional pressure characteristics from highest to lowest
- PP1 / PP2 / PP3 / PP4 / PP5
- CP1 / CP2 / CP3 / CP4 / CP5
- 1/II/III/IV/V
- proportional pressure curves
- constant pressure curves
- constant rotational speed curves

APPLICATION:

The NOVA series circulation pump is best suited for the following systems:

- Fixed temperature heating system with variable flow rate
- Heating system with variable pipeline temperature
- · Heating system with night mode
- Air-conditioning system
- · Industrial circulation system
- · CH and DHW systems.

The energy efficiency coefficient for NOVA pumps is:

EEI<=0,23

IVO

Energy-saving electronic circulation pumps that meet the requirements for A class pumps.

The energy efficiency coefficient for MAGI pumps is:

EEI<=0,23

which, according to Commission Regulation (EU) no. 622/2012 is the reference criterion for the **most energy-efficient circulation pumps**

The MAGI series circulation pump is equipped with a permanent magnet motor and a differential pressure regulator, which automatically and continuously adjust the pump capacity to meet the actual needs of the system. The pump control panel is placed on the top of the motor for easy operation. Its dial displays the current electricity consumption. The pump is supplied with a set of threaded unions, including an adapter for cable connection

AUTO (factory setting)

- The curve of proportional pressure characteristics – from highest to lowest

• LPP / HPP • LCP / HCP

• 1/11/111

- Proportional pressure curves- Constant pressure curves

Constant pressure curvesConstant rotational speed curves

APPLICATION:

The MAGI series circulation pump is best suited for the following systems:

- Fixed temperature heating system with variable flow rate
- Heating system with variable pipeline temperature
- Heating system with night mode
- Air-conditioning system
- Industrial circulation system
- Household CH and DHW systems

BETA 2

Energy-saving electronic circulation pumps with A energy-efficiency rating

EEI<=0,23

The pumps are designed for forcing circulation in central heating systems and solar systems. The pumps are equipped with an electronic processor for automatic pump control, which together with a frequency converter allows for significant energy savings. The processor provides 11 operating modes depending on the system requirements. The power consumption is from 1/10 to 1/3 of conventional pumps.

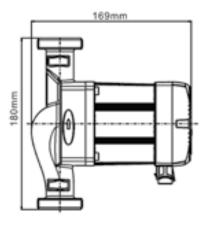

The pump is supplied with union joints and power cable.

BETA 2 circulation pump is intended for the following systems:

- Constant temperature variable flow heating system
- Variable pipe temperature heating system
- Heating system with night mode
- · Air conditioning system
- Industrial circulation system
- Domestic central heating system and domestic hot water system.

OHI PRO MAX series are seal-less circulating pumps with increased durability. The MAX pumps have higher operating parameters than the OHI PRO pumps.

The pumps have a higher density ceramic shaft and plain bearings. Motor durability and better electrical parameters are achieved by using stronger Class F insulation winding. All processes during the manufacture of OHI PRO pumps are carried out by robots. The robots also check the quality of the intermediate products after each stage of production. At the end, the pumps are electrically and hydraulically tested. Due to the automation of the manufacturing process, the final product is of the top quality that is reproducible in every unit. All these actions have allowed us to extend the warranty period to 3 years.

By default, the pumps have 3 speed levels for adjusting operating parameters depending on the user's and system's requirements. Due to the design and high quality materials used, the pumps are very quiet during operation.

The idea behind the creation of the OHI PRO pump was based on the belief that it is necessary to build a device with a more durable and reliable design compared to generally available circulation pumps, as well as a change in the price underselling trends.

All OHI pumps have PZH (National Institute of Hygiene) approval.

GP-SIŁ-DN25 pump group with a 3-way mixing valve The version without a pump includes an electric actuator.

It is equipped with:

- ball valve integrated with the thermometer (power supply: red),
- ball valve with integrated check valve and thermometer (check: blue),
- adjustable bypass,
- EPP insulation.

A standard 180 mm long circulation pump can be used.

- Irreversible pump group (see: the manual).

^{*} The manufacturer's installation, operating, and warranty guidelines apply to the pump (check before installing in the pump group). Verify whether it is possible to correctly install the hydraulic and electrical equipment of a given manufacturer's pump in the pump group.

^{*} The product is not included in the current catalogue price list

^{*} Non-standard goods, made to order

^{*} The photos and diagrams contained in this leaflet are for reference only.

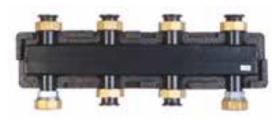

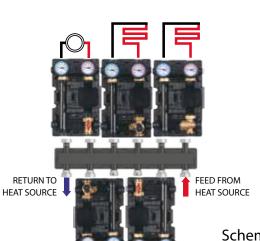

DN25 manifold

DN25 manifold (up to 70 kW) for working with central heating pump groups (standard)

The manifold is used to expand heating circuits, save space, and quickly build a comfortable heating system.

The distributor manifold block has a connector with flat sealing connections. You can install pump groups in the upper and lower part of the manifold. Wall console included in the price of the manifold. The models of individual manifolds may differ in terms of the pump group assembly method (see the manual).

DN25 coupling

DN25 GW vertical hydraulic coupling (up to 70 kW) with EPP insulation

The task of the hydraulic coupling is to separate the boiler circuit from the heating circuit, balance the flows, and keep the pumps running smoothly. Additionally, the coupling protects the boiler against return temperature which is too low.

Chamber with a separation net and welded connectors:

- four 1" connectors for heating circuit pipes,
- single ½" connector for the temperature sensor,
- single $1\!\!/_{\!\!2}$ " connector on the top for the air vent,
- single $\ensuremath{\mathcal{V}}_2$ " connector at the bottom to the drain-fill valve. Includes:
- EPP insulation,
- single 1½" plug,
- single automatic vertical air vent,
- single ½" drain-fill valve.

| SPECIFICATIONS | | | | | |
|--|---------------------------|--|--|--|--|
| Power in kW at $\Delta T = 20 \text{ K}$ | up to 67 kW | | | | |
| Connections of the heating system | 4 × 1" GW (female thread) | | | | |

| Max. operating temperature | up to 110°C | | | | |
| Max. operating pressure | 6 bar | | | | |
| Max. Kvs | 3 m³/h | | | | |

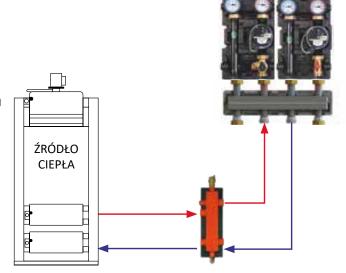

Schematic diagram

Note

The diagram cannot replace the technical design prepared by an authorised designer. Read the instructions and warranty conditions before installation.

Note!

- The coupling can be installed together with the DN25 standard distributor (up to 70 kW).
- The coupling cannot be installed with a decoupling distributor or with an integrated coupling and guard.
- The coupling does not contain any mounting elements.

The pumps have 3-speed motors for adjusting operating parameters depending on the user's requirements. The pumps are available with bodies made of bronze or cast iron. Due to the design and high quality materials used, the pumps are very quiet during operation.

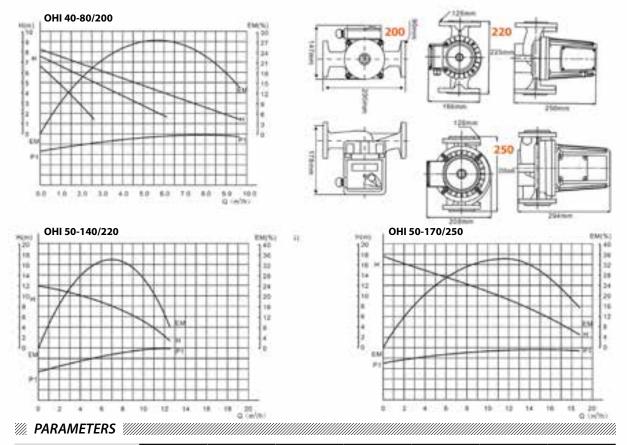

All OHI pumps have PZH (National Institute of Hygiene) approval.

S-150 CONTROLER

The S-150 CONTROLLER is designed to control the central heating water pump. The controller is tasked with switching on the pump if the temperature exceeds the set value, and switching it off if it drops below the set value. This prevents unnecessary operation of

the set value. This prevents unnecessary operation of the pump, which allows you to save electricity (savings depending on the degree of use of the furnace can reach up to 60%) and extends the life of the pump. As a result, its reliability increases and operating costs decrease. The switch-on and switch-off temperature can be set in the range of 0–99°C. Hysteresis has been replaced with the possibility of any switch-off temperature setting.

Example: Set temperature of 34°C (lower display), switch-off temperature of 31°C

If the sensor temperature reaches 34° C, the pump turns on at 34° C and continues to work until the sensor temperature drops to 31° C, the controller turns the pump off.

The controller is equipped with 2 LED displays. The current temperature measured by the sensor is displayed as standard on the upper one, while the lower one shows the switch-off temperature. The MENU button toggles the controller into preview mode and switch-on/switch-off temperature settings, as well the anti-stop function setting.

THERMOSTAT FUNCTION

The controller has also a built-in thermostat function. It is possible to set the temperature at which the controller turns off the controlled devices, and then, after lowering it to the required value, it starts the device.

ANTI-FREEZE FUNCTION

The controller is equipped with the ANTI-FREEZE function, which starts the pump when the ambient temperature drops below 5°C to prevent the controller from freezing.

| SPECIFICATIONS | | | | | |
|---|----------------------------|--|--|--|--|
| Temperature adjustment range (set temp) | 0 - 99∘C | | | | |
| Supply voltage | 230V/50Hz±10% | | | | |

| Output | 230V/50Hz | | | | |
| Max output load current | pump 1 A (load resistance) | | | | |

Magnetic filter

The magnetic filter is designed to trap impurities found in central heating systems. Modern systems equipped with highly efficient boiler feed installations are exposed to breakdowns and reduction of performance and efficiency due to contamination with iron oxides, the main component of rust, which are generated by corrosion and deposited in the form of sludge.

Iron oxide particles circulate throughout the heating circuit, depositing in the critical points of the installation and exposing the entire system to the failure of pumps, valves or heat exchangers etc., and the heating efficiency of the boiler is reduced, which translates into increased heating costs.

The use of magnetic filters / dirt separators improves the protection of the entire heating system, by removing most of the solid particles, which include iron or iron oxides suspended in the heating system fluid. The filters can be used in systems with continuous circulation of the heating medium. The heating medium may consist of water-glycol solution, with the glycol content not exceeding 50%. The filters can also be used in solar systems and cooling systems, trapping impurities such as sand.

CHARACTERISTICS:

- · For use in central heating and solar systems
- · Double filtration method
- · Easy removal of impurities
- High magnetic force
- Top quality materials24 months warranty
- Warranty and post-warranty service

TECHNICAL DATA:

- Material: PA66 + glass fibre /copper, stainless steel
- · Maximum operating pressure 6 bar/ 0,6Mpa
- Maximum liquid temperature 90°C
- Filtration efficiency ≥500µm
- Maximum flow 30 l/min
- Magnetic force 9000 Gauss
- Connection ¾" or 1"

Surface pump designed for increasing pressure in hydraulic systems. The pump can be used as a circulator for some industrial equipment, such as machines, laser devices, injection moulding machines, food processing machinery, and can also supply water to small boilers. The pump is designed to operate with cold and hot water. The set includes an automatic switch for pump operation control. The pump inlet/outlet and impeller are made of brass. An important advantage of the pump is its low-noise operation and compact size, therefore it can be installed in residential premises.

APPLICATION:

- Increasing pressure in systems with water heaters.
- Increasing pressure in water supply systems.
- By using the pump, regardless of the pressure and its changes in the water supply system, it is possible to increase the pressure and keep it constant.
- Increasing pressure in multi-storey water systems.
- · Aeration and water circulation in fish keeping.

CPI 15-15

Circulation pumps for hot water systems

Seal-less circulation pumps designed for forcing hot water circulation. In systems without hot water pumps, after opening the tap, before the hot water starts flowing, cool water remaining in the pipeline will flow first. If a hot water pump is installed, hot water will flow almost immediately after opening the tap. The pump is usually installed upstream the boiler or hot water tank. With years of experience, we have been able to improve previous designs and create the top quality pump.

Using the latest technology, the efficiency and, consequently, the energy consumption have been improved compared to older designs.

Brass body and ceramic shaft guarantee the pump is almost faultless.

The pumps have PZH (National Institute of Hygiene) approval.

ADVANTAGES:

- · Robust design
- · Low-noise operation
- Hassle-free control
- Easy installation
- Complete with cable and plug.

E-IBO 15-14

Compared to traditional circulation pumps, the energy consumption of the E-IBO pumps can be as low as 3W depending on the system.

Energy-saving electronic hot water circulation pumps with A energy-efficiency rating.

The E-IBO 15-14 pumps are designed for continuous operation forcing the hot water circulation, and in small heating systems. The pumps can be used in ventilation and air-conditioning systems. By using circulation pumps, water consumption is significantly reduced.

Compared to traditional circulation pumps, using the permanent magnet motor allows to reduce the energy consumption of the E-IBO pumps to as low as 3W depending on the system. The pumps are equipped with a spherical impeller operating in various planes.

FEATURES:

- Pump parameters can be automatically or manually adjusted to the system requirements.
- A spherical Noryl impeller moves in various planes.
- · Wear-resistant ceramic shaft .
- Stainless steel pump body.
- Power cable with a plug.

ADVANTAGES:

- Easy installation and start up
- Low power consumption
- High energy efficiency has been achieved by using the permanent magnet motor.
- Maximum usability
- Robust design
- Low-noise level of the pump and the entire system.

IPML INDUSTRIAL CIRCULATION PUMPS FOR CIRCULATING COLD AND HOT WATER.

Pumps designed for constant or variable flow water supply systems with the medium temperature not exceeding 100°C (80°C) and the pressure not exceeding 0.6 MPa. Pumps are most often used in heating and cooling systems. The smallest of the series, the IPML 25/125 pump can also be used to fill solar systems. The IPML 50/1100 and 50/2200 water circulation pumps are intended for water containing non-abrasive and non-absorbent solid impurities of 0.27 kg/m3.

OPERATING CONDITIONS:

- Maximum liquid temperature 80 /100°C
- Maximum ambient temperature 40°C
- Class B/F Insulation
- Operating mode continuous
- Protection IP44
- Protection for 230V motors
- Rotational speed of the electric motor: 2850RMP

MATERIALS:

- Pump body: cast iron
- Bearing retainer: cast iron
- Motor housing: aluminium
- Shaft and rotor: stainless steel AISI 304
- Impeller: brass (to IPML 50/1100)
- Impeller: cast iron (from IPML 50/1500))
 - Mechanical seal: ceramics/graphite/NBR

PRT TRACTOR PUMPS

PISTON PUMPS

CLASSIC / DECORATIVE ABYSSINIAN PUMP

SEMI ROTARY PUMP

SBAW

The PR-50 hand pump is a piston pump designed for pressure testing of system tightness and for filling solar system. The main advantage of the pump is that it can be used without access to electric power.

Due to its open design, the pump can also be used as a 12 L vessel. The proven and durable design make the pump very popular among installers.

OPERATING INSTRUCTIONS:

Connect the end of the pressure hose to the tested system, then filled the pump tank with clean, preferably filtered water. Next, fill the system with water. The test pump is only used to fill the final amount of liquid required to achieve the desired pressure. Open V1 valve and close V2 valve.

After connecting the pump, filling the pump and the tested system with water, opening the V1 valve and closing the V2 valve, pump the water with a lever while checking the pressure gauge reading. Once the required pressure has been achieved, close the V1 valve. If, by mistake, the test pressure is slightly exceeded after closing the V1 valve, slightly open the V2 valve. The pressure will then start to drop.

APPLICATION:

- Tightness testing of pipe systems (water supply systems, central heating, compressed air, and oil systems).
- Tightness testing in the production of boilers and pressure vessels.
- Filling solar systems.
- Injecting antifreeze agents into existing central heating systems.

ADVANTAGES:

- 1.3m steel braided discharge hose reduction of flow losses and limiting measurement errors.
- Durable piston lever resistant to torsion, can be used as a pump carrying handle.
- The double cut-off valve system in the
- monobloc body guarantees a constant pressure and eliminates the leaks at union joints.

| Name | Working volume/piston travel (ml/stroke) | Tank capacity litre (l) | Max. pressure MPa/bar/kg) (cm2) | Inlet/outlet (inch) | Dimensions L/H/W (cm) | Weight (kg) |
|---------|--|----------------------------|---------------------------------------|------------------------|-----------------------------|----------------|
| PR – 50 | 45 | 12 | 5/50/50 | 1 | 49/16,5/16,5 | 7,8 |

Electric pump designed for pressure testing of system tightness and for filling solar system. The pump's electric motor makes its use exceptionally easy and comfortable. The pump comes with a liquid container, suction hose, high pressure hose, overflow hose and suction filter. Unlike the PR AUTO hand pump, it can also be used to fill the systems with water.

OPERATING INSTRUCTIONS:

Connect the suction to the filter and then connect it the pump along with the overflow and high pressure hose.

Loosen the pressure adjustment screw to prevent the sudden pressure increase after starting the pump.

When the suction hose with the connected filter and the overflow hose are placed in a container with water, close the valve to which the high pressure hose (black) is connected.

After setting the desired pressure with the pressure adjusting screw, you can start filling the system.

APPLICATION:

- Tightness testing of pipe systems (water supply systems, central heating, compressed air, and oil systems).
- Tightness testing in the production of boilers and pressure vessels.
- Filling solar systems.
- Injecting antifreeze agents into existing central heating systems.

ADVANTAGES:

- Can be used to fill the system
- Automatic operation pump equipped with an electric motor
- The pump packaging can also be used as a water tank
- All hoses and filter included
- Easy-to-use

AOP - PUMPS / OIL SETS

AOPs are displacement vane pumps designed for pumping diesel fuel, heating oil and bio-diesel fuel. The pumps are equipped with thermal protection mounted in the motor winding.

AOP 60 and AOP 55 pumps are powered by 230 V/50 Hz single-phase AC. AOP40 - 12 V and AOP70 - 12/24 V pumps are power by 12 V or 24 V DC batteries. The pumps are equipped with a by-pass excess flow valve.

APPLICATION:

The pumps are used in industrial, agriculture and domestic applications. AOP 60 pumps are also available in professional pump sets with complete fittings.

The set includes:

- AOP pump
- Frame for transporting and stable installation of the set.
- Oil filter to prevent solid particles such as sand, filings etc. from getting into a pump.
- Gun (filler nozzle) with automatic flow cut-off and swivel connector.
 The gun returns when a tank is fully filled.
- Mechanical flow meter (AOP 60, AOP 80 set, accuracy ± 1%) with a three-digit erasable dial and non-erasable total meter.
- Electronic flow meter (AOP 60E set, accuracy ± 0.5%) with a seven-digit erasable display and non-erasable total meter.
- 4 m delivery-side oil-resistant rubber hose.
- 2 m suction-side oil-resistant rubber hose with non-return valve and a suction strainer.

APPLICATION:

Transport companies, agriculture farms, industrial plants. Its handy housing ensures comfortable handling between the barrels, tanks or stationary installation.

BZP / H-BZP

INTERNAL COMBUSTION PUMPS

IMAGE: BZP-20

Pumps mounted on a metal support frame. Used for draining and irrigation. The pumps are designed for pumping clean and dirty water with solids of a maximum size permissible in accordance with technical parameters. The pumps are an excellent solution for civil engineering, fire services and agriculture farms. The pumps with internal combustion engines are fully independent of the electricity network, therefore they are very popular among the customers. The set includes a metal frame holding the entire internal combustion system, i.e. a petrol engine, fuel tank and pump with inlets and outlets.

General purpose SAE 10W-30 oil should be used with the BZP pump motor;

Two types of hoses are required for the pump:

- The suction hose must be leak-proof along its entire length and should have a rigid braid to prevent it from sucking in / jamming during operation. The hose diameter must match the pump inlet diameter, the hose diameter must not be smaller. Mount a suction strainer with a non-return valve at the end of the suction hose.
- The discharge hose diameter should match the outlet diameter. Woven (fire) hoses can be used as discharge hoses.

 $\label{thm:continuity} Tractor\ pumps\ mounted\ on\ painted\ steel\ frames\ equipped\ with\ a\ three-point\ suspension\ system\ on\ the\ tractor.$

Depending on the tractor type, it is possible to install a frame extension.

The pumps are driven by a power take-off shaft (PTO). Required tractor PTO shaft revolutions are 540 rpm. Via the PTO shaft (shaft included), the revolutions from the PTO are transferred to a 6.6 gear ratio gearbox that drives the pump. The minimum tractor power required to drive the pump is 15 HP, the maximum 125 HP.

PRO

Single-stage, self-priming PRO tractor pumps are designed for drainage and irrigation. They can pump dirty water (including slurry). The maximum suction capacity of the pump after priming is 7 m. The pumps are ideal for fighting floods.

PRN

Single-stage centrifugal non-self-priming PRN tractor pumps (before starting, the pump and the suction hose must be primed) can be used for pumping water from ponds, lakes, rivers, impounding reservoir and wells, where the water level during pumping does not fall below 6 m from pump inlet. The pumped water must be clean, without solid impurities. The pump is designed to supply water to all types of irrigation systems that require higher pressure. It can be used in vegetable farming, horticulture, tree nurseries and other agricultural production.

The PTO shaft is supplied with the pump.

| SPECIFIC | ATION |

PRT TRACTOR PUMPS — MADE IN ITALY

Single-stage, centrifugal tractor pumps driven by a power take-off (PTO) shaft, designed to be combined with tractors with 10 HP to 200 HP of power.

The pumps are mounted on a painted, steel frame equipped with a three-point linkage on the tractor. The required PTO revolutions of the tractor are 459 rpm. Through the PTO shaft, the revolutions from the PTO are transmitted to the gearbox which drives the pump.

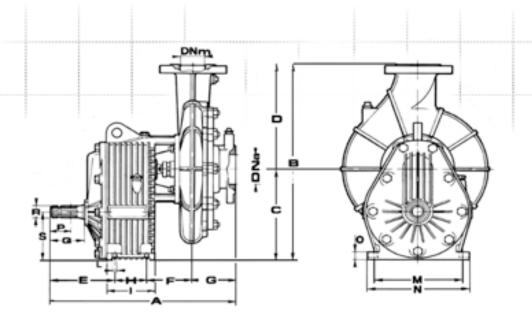

Pumps from the PRT series are non-self-priming pumps (prior to start-up, the pump must be primed with a suction hose), however, they are equipped with an additional suction system. They can be used in agriculture to supply any irrigation systems which require more pressure, they can be used in vegetable crops, horticulture, nursery, and other agricultural production. In addition, the range of use of the pump includes: pumping water from ponds, lakes, rivers, storage reservoirs and from wells where the water level during pumping does not drop below 6 m from the pump inlet. Pumped water must be clean, free from solid contamination.

PISTON PUMPS CLASSIC / DECORATIVE ABYSSINIAN PUMP SEMI ROTARY PUMP

IMAGE: Baseplate / Classic Abyssynian Pump

IMAGE: Baseplate / Decorative Abyssinian Pump

IMAGE: Semi Rotary Pump

Hand cast iron pumps intended for pumping clean cold water from underground intakes.

The pumps have a simple and durable design with resistance to wear and tear.

Pumping is done by means of a piston with cup leather packing mounted in the pump body. The piston is human-powered via a rod and external lever.

Abyssinian pumps are used mostly in places where electricity is not available. Pumps are available in two versions: classic - green and decorative with ornaments - black.

Both versions are available in sets with cast iron baseplates.

Application (the same for both pumps):

Supply of water from underground intakes to allotments, gardens, and in places where electricity is not available. Due to their attractive design, the pumps can be decorative features in the garden.

TECHNICAL DATA:

- Casting: cast iron
- Piston: cast iron with cup leather packing
- Body: vertical orientation with pressing
- Non-return valve: yes

ADVANTAGES:

- Robust design
- Easy water suction
- Simple designFaultless
- Easy installation and removal
- Attractive design
- Cost-free use

K-type cast iron semi-rotary hand pumps designed for pumping clean liquids, such as water, gasoline or diesel fuel. The pumps are mainly used on recreational plots, in gardens, holiday houses and in any other places without electricity or where there is a risk of its failure - the semi-rotary pump can act as an alternative water supply. K-type pumps can also be used as booster pumps for power operated non-self-priming pumps. Maximum suction head of semi-rotary pumps is 7 metres. All pumps are equipped with a drain plug to drain water in case of potential freezing.

The pump body is mounted with flanges, so it can be easily removed if necessary.

Pumps designed for transporting concentrated or non-concentrated food liquids with up to 50% dry matter content or other food products with a temperature up to 75°C. Centrifugal pumps with open impeller, enclosed motor, and distanced hydraulic body. Inlet/outlet are complete with connections for easy installation. The device has four adjustable legs. SIC/WC (EPDM) mechanical seal. VMQ body seal/

APPLICATION:

- dairy production sector (fresh and pasteurized milk, whey, ice mixtures),
- fruit processing (nectar juices, clarified juices, fruit and vegetable drinks, wines and fruit liquors), alcohol production (mashes, spirits),
- transport of cleaning liquids in CIP systems.

Certificate of Health Quality has been issued for the device by

THE NATIONAL INSTITUTE OF PUBLIC HEALTH - NATIONAL INSTITUTE OF HYGIENE - FOOD SAFETY DEPARTMENT (PZH).

CONIBO / CONAQUA

CONIBO

The CONIBO pump is a compact device designed for pumping condensate. The pump is fully automatic. After filling the tank, the pump automatically starts, and after draining the condensate it automatically stops. 3/8 inch diameter and 6 m long transparent discharge hose is supplied with the pump. The pump is suitable for short-time pumping of water at 50°C. The pump can operate with water with pH range from 2.5 to 10. The pump has been designed for faultless operation in professional air conditioning systems. Its most important features are low-noise operation and compact size. The pump is fully automatic and maintenance free, which guarantees comfort of use. The condensate draining cycles are automatic and depend on the condensate level in the tank. The pump is mostly used in applications where condensate flows below the level of its drainage from premises or systems.

CONAQUA

The CONAQUA pump has a similar design to CONIBO, it also operates in a fully automatic cycle.

The pump is suitable for pumping water at temperatures from 1°C to 25°C. For short time, it can pump water at 50°C, however, the operating time may not exceed 90s, and the stand-by time must be at least 600s. The pump is suitable for pumping condensate to a height of up to 5m and a maximum horizontal distance of 20 m (each elbow and valve must be counted as 1 m discharge height). During installation, horizontal sections should be sloped by 1%. CONI pumps are designed for pumping water condensate from cooling units, air conditioning units and condensing furnaces. The pump is a compact-size device. The pump is fully automatic and maintenance free, which guarantees comfort of use. After filling the tank with condensate, the pump starts automatically, and after draining the condensate it stops automatically until the next cycle. The pump is mostly used in applications where condensate flows below the level of its drainage from premises or systems.

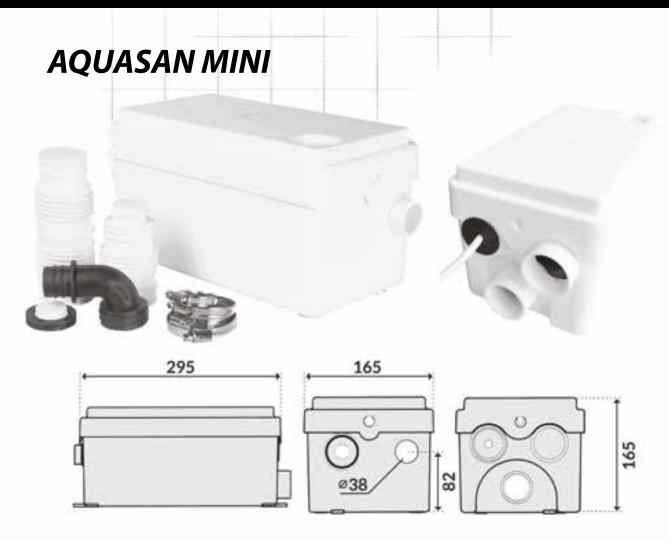

APPLICATION:

Pumping water condensate from cooling units, air conditioning units and condensing furnaces.

//// PARAMETERS

| Name | Lift (m) | Capacity (l/min) | Voltage (V) | Weight (kg) | Motor power / nominal (W) | Dimensions D/H/W (cm) | Tank capacity (l) |

| CONIBO | 4,5 | 330 | 230 | 2,2 | 80 | 28/17/13,5 | 1,9 |
| CONAQUA | 5,1 | 250 | 230 | 1,7 | 58 | 28/15/13 | 1,7 |

Sanitary pumping station for bathrooms and kitchens.

The pump is similar to the Sanibo mini pumping station. The switch makes the pump a fully automatic device intended for use in bathrooms to drain water from wash basins, shower cabins or from washing machines or sinks installed in kitchens. It is an excellent solution for bathrooms where the wash basins or shower bases are installed outside the stack and riser or below the sewage discharge level. Bathtubs, washing machines, wash basins, shower bases, sinks etc. can be connected to the pumping station.

Its compact size and low-noise makes the pump operation discreet and suitable for installation e.g. in under-sink cabinets.

The pump is supplied with:

- End plugs: 2 pcs x 40 mm,
- Stainless steel clamping rings: 3 pcs.

APPLICATION

Domestic premises without technical means to connect sanitary facilities to gravity sanitary sewage system - basements, attics and other rooms converted for sanitary purposes.

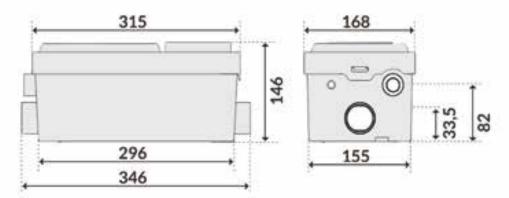

| Name | Lift (m) | Capacity (I/min) | Voltage (V) | Motor power (W) | Dimensions L/H/W (cm) | Weight (kg) | Max. temperature (°C) |
|--------------|-------------|---------------------|----------------|--------------------|-----------------------------|----------------|-----------------------------|
| AQUASAN MINI | 4 | 40 | 230 | 250 | 30/17/16,5 | 4 | 40(90)* |

Sanibo mini is a sanitary pump designed for bathrooms and kitchens. The pumping station has one of the most advanced and reliable design available on the market. The pump is fully automatic and intended for use in bathrooms to drain water from wash basins, shower cabins or from washing machines or sinks installed in kitchens. The pump will automatically start when the liquid level is 55mm and stop when it falls to 25mm. It is an excellent solution for bathrooms where the wash basins or shower bases are installed outside the stack and riser or below the sewage discharge level. Bathtubs, washing machines, wash basins, shower bases, sinks, and even bidets can be connected to the pumping station. Its compact size and low-noise makes the pump operation discreet and suitable for installation e.g. in undersink cabinets. The pump has two inlets for connecting for example shower base and sink.

The pump is supplied with:

- End plugs: 40mm
- 28mm/32mm elbow non-return valve
- Stainless steel clamping rings

APPLICATION:

Domestic premises without technical means to connect sanitary facilities to gravity sanitary sewage system - basements, attics and other rooms converted for sanitary purposes.

| Name | Lift (m) | Capacity (I/min) | Voltage (V) | Motor power (W) | Dimensions L/H/W (cm) | Weight (kg) | Max. temperature (°C) | Liquid PH |
|--------------|-------------|---------------------|----------------|--------------------|-----------------------------|----------------|-----------------------------|-----------|
| AQUASAN MINI | 6,5 | 100 | 230 | 300 | 35/15/16 | 4,5 | 45 | 4-10 |

As a toilet pump, the Aquasan has been available on the market for many years. It is an economical version of Sanibo series. The pump has three inlets - 100 mm main inlet for toilets, two 40mm for shower bases or wash basins, and one 40mm outlet. It is an excellent solution for bathrooms where the toilet is installed outside the stack and riser or below the sewage discharge level. It has a switch for automatic pump control - the pump automatically stops after filling the device. Additionally, the pump can be started manually. Its low-noise operation makes the pump ideal for domestic applications. An additional advantage of the device is the ability to pump liquids below 90°C for up to 1 minute.

Bathtubs, toilets, washing machines etc. can be connected to the pumping station, and unused inlets can be closed with end caps. The pump is supplied with a set of stainless steel clamping rings and end caps, which makes it suitable for various applications.

The set includes:

- WC pump
- End plugs: 2 x small (40 mm), 1 x large (100 mm).
- Clamping rings

APPLICATION:

Domestic premises without technical means to connect sanitary facilities to gravity sanitary sewage system - basements, attics and other rooms converted for sanitary purposes.

| Name | Lift (m) | Capacity (I/min) | Tank capacity (I) | Voltage (V) | Motor power (W) | Dimensions L/H/W (cm) | Weight (kg) | Temp max (°C) | Ingress Protection | Liquid PH |
|-------------|-------------|---------------------|-------------------------|----------------|--------------------|-----------------------------|----------------|------------------|-----------------------|-----------|
| AQUASAN PRO | 6,5 | 140 | 6 | 230 | 600 | 51x32x22 | 8,5 | 50(90)* | IP 44 | 4 - 10 |

The Sanibo 1 WC pump is a fully automatic device designed for draining sewage from toilets, wash basins and sinks. Its low-noise operation makes the pump ideal for domestic applications. Sanibo 1 has a three-blade impeller

with six cutting edges that perfectly fight impurities that enter the pump. Additionally, the pump has three inlets - 100 mm main inlet for toilets, two 40mm for shower bases or wash basins, and one 40mm outlet. It is an excellent solution for bathrooms where toilets are installed outside the stack and riser or below the sewage discharge level. It has a switch for automatic pump control - the pump automatically stops after filling the device. Additionally, the pump can be started manually.

An additional advantage of the device is the ability to pump liquids below 90°C for up to 2 minutes. Due to the 7 metre head vertically and 70 metre horizontally, there is no need for gravity sewage disposal. Its operating cycle is approx. 8 seconds.

The pump is supplied with a set of stainless steel clamping rings and end caps, which makes it suitable for various applications.

The set includes:

- $\bullet \quad \text{WC pumps with cutting system} \\$
- End caps: x 2 (40mm), x 1 (100mm).
- Non-return valves x 2
- Clamping rings

APPLICATION:

Domestic premises without technical means to connect sanitary facilities to gravity sanitary sewage system - basements, attics and other rooms converted for sanitary purposes.

| Name | Lift (m) | Capacity (I/min) | Tank capacity (l) | Voltage (V) | Motor power (W) | Dimensions L/H/W (cm) | Weight (kg) | Temp max (°C) | Ingress Protection | Liquid PH |
|----------|-------------|---------------------|-------------------------|----------------|--------------------|-----------------------------|----------------|------------------|-----------------------|-----------|
| SANIBO 1 | 7 | 120 | 6 | 230 | 600 | 51x32x22 | 8,5 | 60 (90)* | IP 44 | 4 - 10 |

SANIBO 4 is a high quality fully automatic toilet pump for pumping sewage, equipped with three inlets for draining sewage from toilets and wash basins/sinks - one main 100 mm inlet for toilets, 40mm for shower bases or wash basins, and one 40mm outlet. It has a switch for automatic pump control - the pump automatically stops after filling the device. Additionally, the pump can be started manually.

Its low-noise operation makes the pump ideal for domestic applications. Long blades used in the Sanibo 4 impeller provide increased pump flow up to 300 l/min.

and excellent performance when dealing with impurities flowing into the pump. An additional advantage of the device is the ability to pump liquids below 90°C. Due to the 9 metre head vertically and 90 metre horizontally, there is no need for gravity sewage disposal. Its operating cycle is approx. 6 seconds.

The set includes:

- WC pump
- End caps: x 2 (40mm), x 1 (100mm).
- Non-return valves x 2
- Clamping rings x 8

APPLICATION:

Domestic premises without technical means to connect sanitary facilities to gravity sanitary sewage system - basements, attics and other rooms converted for sanitary purposes.

| Name | Lift (m) | Capacity (I/min) | Tank capacity (I) | Voltage (V) | Motor power (W) | Dimensions L/H/W (cm) | Weight (kg) | Temp max (°C) | Ingress Protection | Liquid PH |
|----------|-------------|---------------------|-------------------------|----------------|--------------------|-----------------------------|----------------|------------------|-----------------------|-----------|
| SANIBO 4 | 9 | 300 | 6 | 230 | 600 | 51x32x22 | 9,5 | 90 | IP 44 | 4 - 10 |

Bathroom sewage pumping station. Many years of experience allowed us to design a top quality device for a wide range of applications. The main application of the pump is to remove sewage from toilets, however use of three inlets allows to collect sewage from, e.g. bath, washing machine and toilet - one main 100 mm inlet for toilets, 40mm for shower bases or wash basins, and one 40mm outlet. The pump is exceptionally quiet so it is an ideal solution for domestic applications. SANIBO 5 is equipped with end caps to cover unused inlets. The pump can also be used in kitchens or laundry rooms, without connecting to the toilet. It has a float switch for automatic pump control - the pump automatically stops after filling the device. Additionally, the pump can be started manually. An additional advantage of the device is the ability to pump liquids of up to 40°C (short-term 60°C) for up to 2 minutes. Due to the 9.5 metre head vertically and 100 metre horizontally, there is no need for gravity sewage disposal. Its operating cycle is approx. 8 seconds. Sanibo 5, as the only branded pump available on the market has stainless steel motor housing, strainer and cutting system providing for guaranteed reliability,

and a powerful pump motor is provided with built-in thermal protection. The device is designed according to the most demanding European standards.

The set includes:

- WC pumps with cutting system
- End caps: x 2 (40mm), x 1 (100mm).
- Non-return valves x 1
- Clamping rings x 8

WATCH THE PUMP OPERATION AND DESIGN ON: http://bit.ly/sanibo

APPLICATION:

Domestic premises without technical means to connect sanitary facilities to gravity sanitary sewage system

- basements, attics and other rooms converted for sanitary purposes. Water and sewage pumping in places where toilets, wash basins or shower bases are installed outside the stack and riser or below the sewage discharge level.

MATERIAL PARAMETERS

| Name | Lift (m) | Capacity (I/min) | Tank capacity (l) | Voltage (V) | Motor power (W) | Dimensions L/H/W (cm) | Weight (kg) | Temp max (°C) | Ingress Protection | Liquid PH |
|----------|-------------|---------------------|-------------------------|----------------|--------------------|-----------------------------|----------------|------------------|-----------------------|-----------|
| SANIBO 5 | 9,5 | 150 | 6 | 230 | 600 | 44x29x24 | 8,5 | 40 (60)* | IP 44 | 4 - 10 |

Sanibo 4 pump is a new version of the most popular SANIBO 5 pumping station. Also, it is the highest quality automatic pumping and cutting system equipped with three inlets for removing sewage - one main 100 mm inlet for toilets, two 40mm inlets for shower bases or wash basins, and one 40mm outlet. Ingress protection increased to IP 55 is an important improvement.

The pumps has a switch for automatic pump control - the pump automatically stops after filling the device. The pump is exceptionally quiet, so it is an ideal solution for domestic applications.

An additional advantage of the device is the ability to pump liquids of up to 40°C (short-term 60°C) for up to 2 minutes. Its operating cycle is approx.

SANIBO 6, along with SANIBO 5, as the only branded pumps have stainless steel motor housing, strainer and cutting system for guaranteed reliability. The pump motor is provided with built-in thermal protection.

The set includes:

- WC Pump
- End caps: x 2 (40mm), x 1 (100mm)
- Non-return valves x 2
- Clamping rings x 8

APPLICATION:

Domestic premises without technical means to connect sanitary facilities to gravity sanitary sewage system - basements, attics and other rooms converted for sanitary purposes.

| Name | Lift (m) | Capacity (I/min) | Tank capacity (I) | Voltage (V) | Motor power (W) | Dimensions L/H/W (cm) | Weight (kg) | Temp max (°C) | Ingress Protection | Liquid PH |
|----------|-------------|---------------------|-------------------------|----------------|--------------------|-----------------------------|----------------|------------------|-----------------------|-----------|
| SANIBO 6 | 9,5 | 150 | 6 | 230 | 600 | 51x32x22 | 9,5 | 90 | IP 44 | 4 - 10 |

SANIBO B is a toilet pump and cutting system with side inlet. The main application of the pump is to remove sewage from toilets, however, use of three inlets allows to collect sewage from, e.g. bath, washing machine and toilet - one main 100 mm inlet for toilets, two 40mm for shower bases or wash basins, and one 40mm outlet. The pump is exceptionally quiet, so it is an ideal solution for domestic applications. Due to its narrow design, SANIBO B is a perfect solution for concealed frames.

The pump has a float switch for automatic pump control - it is the same system as used in SANIBO 5 and 6 pumping stations. An additional advantage of the device is the ability to pump liquids of up to 40°C (short-term 60°C) for up to 2 minutes. Due to the 9.5 metre head vertically and 100 metre horizontally, there is no need for gravity sewage disposal. Its operating cycle is approx. 8 seconds. SANIBO 5, as the only branded pump available on the market, has stainless steel motor housing, strainer and cutting system for guaranteed reliability, and a powerful pump motor is provided with built-in thermal protection. The device is designed according to the most demanding European standards.

The set includes:

- WC pump with cutting system
- End caps: x 2 (40mm), x 1 (100mm)
- Non-return valves x 1
- Clamping rings x 8

APPLICATION:

Domestic premises without technical means to connect sanitary facilities to gravity sanitary sewage system - basements, attics and other rooms converted for sanitary purposes. Water and sewage pumping in places where toilets, wash basins or shower bases are installed outside the stack and riser or below the sewage discharge level.

IBO RAIN SYSTEM

rainwater pumping set

Automatic pumping set designed for water intake from multiple sources using a single pump with simultaneous replenishment of the source via the water mains in case of lack of water in the tank. Thanks to the use of floats and electro-valves and a computer controlling the entire system, the entire process of water intake, tank change and its replenishment with municipal water takes place automatically.

Basic features of IRS sets:

One pump - multiple sources

The pump included in the IRS set can draw water from one, two or even three different tanks located on the same plot of land.

Automatic change of water intake source

A float included in the set continuously monitors the water level in the tank from which the IRS draws water. When the water level approaches the bottom of the tank, the float sends a signal to the solenoid valve, which changes the source of water intake or, as a last resort, opens the valve that replenishes the rainwater tank with water from the mains water supply or a deep well.

Automatic pump operation

The applied controllers - IBOPRESS10 and IVR10 - control the pump on the basis of the pressure prevailing in the network. The controllers switch the pump on when the pressure drops (turning on the tap in the garden - starting watering, flushing the toilet, starting the washing machine) and switch it off when the pressure rises (turning off the tap).

Suction capacity of the pump up to a depth of 7 metres

The pumps used in IRS sets are self-priming devices, which means that they can draw water from sources below where the pump is installed. This parameter gives you the possibility to draw water not only from rainwater tanks, but also from wells with the water table falling to a maximum depth of 7 metres from the place where the pump is installed. An additional advantage of the pumps used in the sets is their ability to self-deaerate the system in suction.

Eco-friendly

Drawing water from multiple sources with a single pump gives you the opportunity to store large amounts of rainwater in several tanks, minimising the use of municipal water. The water supply network is only activated when there is no water in all available reservoirs. In addition, the PRO version of the device is equipped with a frequency converter, thanks to which current consumption is reduced by up to 60%.

The system proposed in the IRS sets for refilling the tanks with municipal water complies with the PN-EN 1717 standard.

IRS sets consist of:

- High-quality IPRO self-priming pumps guaranteeing trouble-free operation for many years of use;
- Pump controller for automatic operation of the system;
- The electro-valves, 20 m floats and controller the system is programmed and ready to go;
- Mounting plate.

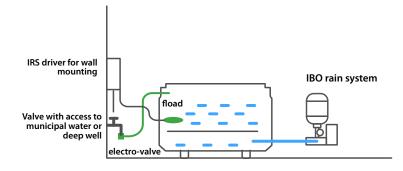

fot. IBO RAIN SYSTEM 2 (wersja ze sterownikiem IBOPRESS10)

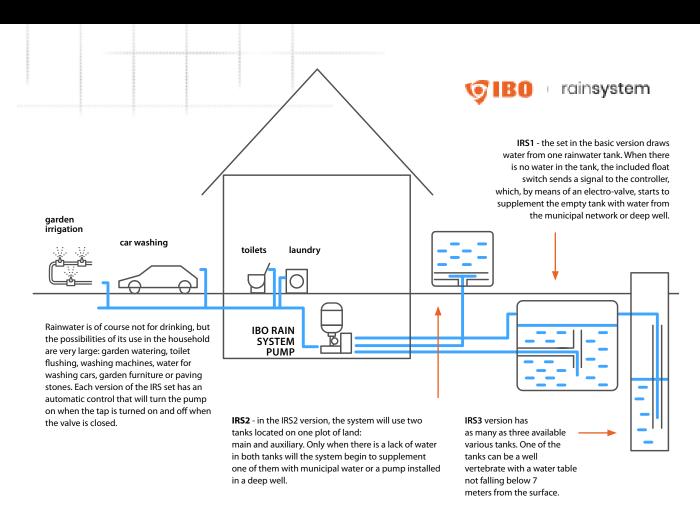

fot. IBO RAIN SYSTEM 2 PRO (wersja z falownikiem IVR 10)

The rainwater tank is topped up using an electrovalve and a garden hose connected to it. The solenoid valve is screwed directly into a valve with access to municipal water or from a deep well. A float installed in the tank will be responsible for opening and closing the solenoid valve. On the controller that connects the float to the solenoid valve you will see two LEDs: red - no rainwater, mains open and green - tank full, mains closed.

RAINWATER PUMPING SET

The sets are available in several configurations. When selecting a set, it is important to consider:

- the number of tanks from which the system is to draw water
- pump capacity this should be matched to the amount of water stored or the demand of the garden irrigation system
- type of control: IBOPRESS automation or IVR10 frequency converter; the frequency converter is ideal for pumps with higher capacity (HP1500INOX)

Professional pump protections

The M121 and M131 Intelligent Pump Controller is an easy-to-use control and protection device for direct connection of deep well pumps, submersible pumps

- M-121 for single-phase pumps from 0.75 kW to 2.2 kW (from 1 HP to 3 HP)
- M-131 for 3-phase pumps from 0.75 kW to 4kW (from 1 HP to 5 HP) 5.5 kW - 7.5 kW (from 7.5 HP do 10 HP).

CONTROLLER OPERATING FUNCTIONS

- · Automatic re-start attempt after emergency stop enforced by one of the protection functions. Different self-activation timers for different emergency conditions.
- · Possibility to calibrate the controller and change its calibration to match the
- Activating and deactivating the pump depending on:
 - water levels in the tank from which water is pumped,
 - water levels in the tank to which water is pumped,
 - pressure in the tank to which water is pumped.
- · Manual or automatic operating mode.

CONTROLLER PROTECTION FUNCTIONS

- · Double dry run protection by means of:
 - Liquid level probes/ sensors
 - Analysis of current consumption during pump operation
- Overload protection
- Phase failure protection (M31)
- Voltage drop protection
- Voltage surge protection
- Short circuit protection Overvoltage protection
- High voltage protection

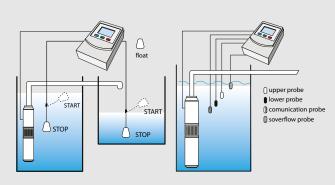

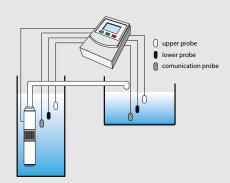

M21/M31

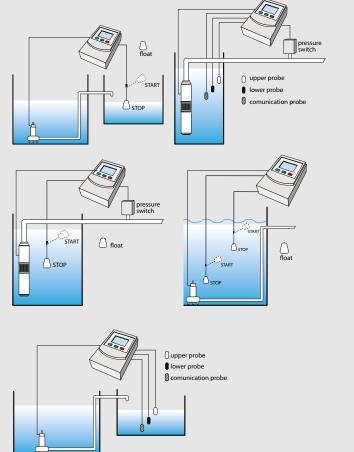

In addition to the M121 and M131 controller, M-21 and M-31 controllers are available with additional features, such as:

- · Displaying of total pump operation time
- Displaying history of the last five failures when the protections have been activated
- Dynamic LCD screen displaying the current status of the pump.

PROTECTIONS / CONTROLLERS

IBOPRESS 10

A series of electronic pressure switches for controlling the pump operation and protecting it against overload and dry run.

The IBOPRESS is a device used for control of operation of any pump type. Depending on the pressure in the system, it switches the pump on or off. The on and off pump pressure can be set.

The IBOPRESS is a cutting-edge electronic controller whose operation is based on a ceramic pressure sensor.

All IBOPESS models have protection functions: it allows setting the maximum current consumption by the pump and protecting it against overload. It is possible to set the minimum pressure at which the controller will switch the pump off, protecting it against a dry run. The IBOPRESS 10 and IBOPRESS 30 devices have an automatic restart function after an emergency shutdown after the set time.

The IBOPRESS 10 and SX switches are used to control the single-phase pumps and are equipped with a cable with a plug and the second cable with an electric socket allowing a very easy connection to the pump control system. The IBOPRESS 30 has an additional cable with a pressure sensor and is used to control the operation of three-phase pumps. High measuring accuracy allows the device to be installed in systems that require constant, unchanging operating conditions.

DIG-IBO 1

Intelligent pressure switch for pump operation control. DIG - IBO is an electronic device with two main functions:

- PUMP OPERATION CONTROL (cut-in and cut-out pressure can be set from an electronic display panel)
- DRY RUN PROTECTION AGAINST (if the function is active and the pump operates without water for more than 20 seconds, the device will stop the pump. Dry run protection is active by default if for any reason, the user does not want to leave this function active, it can be disabled by pressing and holding buttons 2 and 4 together for 3 seconds "F0" (function disabled) or F1 (function enabled by default) will be displayed on the panel. If no operation is performed within 3 seconds, data will be automatically saved and the device will return to the operating mode.

The controller activates the pump when water pressure in the water system drops below the minimum pressure set on the display, and water starts flowing in the pipe on which the controller is installed. When no flow is detected by the controller, the pump will be stopped.

TECHNICAL DATA

- Operating range 0-10 bar
- Supply voltage: 230V, 50Hz
- Ingress Protection: IP66
- Maximum pump power: 1.5kW
- Maximum water temperature: 80 °C

Cut-out pressure setting - H Cut-in pressure setting - L

Use the buttons (arrow) to set the limit, the up arrow - to increase, the down arrow - to decrease. When finished, the switch will save the settings automatically and return to the operating mode.

HYDRO-BLOCK (SK-13)

HYDRO-BLOCK (SK-13)

Devices protecting the pump against damage caused by dry running. The device will automatically stop the pump if the water pressure in the system drops below the cut-out level - 0.7 bar. The device has the RESET button. The pump is first activated by pressing the RESET button. When the system pressure exceeds 1.1 bar, the device will start operating in automatic mode. The device should operate in water supply systems with a pressure tank. The device can be directly connected to single-phase motor pumps. It can be connected three-phase motor pumps via a contactor. The device is suitable for surface pumps only. Warning!!! The HYDRO-BLOCK

The device is suitable for surface pumps only. Warning!!! The HYDRO-BLOCH pressure controller cannot be used instead of a pressure switch.

AUTOMATIC PUMP CONTROLLERS

PC-13

The PC-13 automatic pump controller provides start and stop control functions. The automatic pump controller starts the pump when water pressure in the water system drops below the minimum pressure set on the automatic pump controller, and when water starts flowing in the pipe on which the PC-13 is installed. The controller stops when water flow in the pipe on which the PC controller is installed is stopped. The controller starts the pump when a tap or sprinklers are opened, and stops the pump when they are closed. The controller has a dry-run protection function (pump operation without water). If no water is detected, the controller will stop the pump to protect it against damage. The controller can be connected directly to pumps with motor electrical demand not greater than 10 A (16 A at starting). The controller protects the system against flooding resulting from minor leaks. Leaks cause pressure drops in the system, but the controller will not start because it does not detect water flow (with small leaks, the water flow is insignificant). The device is supplied with a 1 m long cable with a plug and a 60 cm long cable with a socket.

PC-15

Automatic pump controller for up to 1300 W surface and deep well pumps. It can be used instead of a pressure switch and pressure tank. When the tap is opened, a signal is sent to the PC-15 controller and it starts the pump. When the tap is closed, the PC-15 controller stops the pump. The automatic pump controller can operate with single-phase pumps with current draw not exceeding 10A during operation. The device is supplied with dry run protection. When no water is detected in the well, the device will stop the pump. The device is equipped with a 60 cm long cable for connection with the pump and a 1 m long power cable with a plug. The PC-15 automatic pump controller is equipped with 1" inlet and outlet.

PC-59

The PC-59 controller is an electronic device for pump control. It controls the pump operation by monitoring pressure changes in the pipeline and the water flow through the pipeline. With user-adjustable cut-in and cut-out pressure, the device can be used instead of traditional pressure switches. It also protects against dry running. A built-in non-return valve prevents water backflow to the pump. The pressure gauge with marked cut-in and cut-out pressure levels provides accurate and easy adjustment of the device according to user requirements. The device can operate with and without a pressure tank. The PC-59 automatic pump controller is equipped with 1" inlet and outlet. The device is supplied with a 60 cm long cable for connection with the pump and a 1 m long power cable with a pluq.

AUTOMATIC PUMP CONTROLLERS

SK-15

Automatic pump controller for surface and deep well pumps. It can be used instead of a pressure switch and pressure tank. When the tap is opened, a signal is sent to the SK-15 controller and it starts the pump. When the tap is closed, the SK-15 controller stops the pump. The automatic pump controller can operate with up to 1300 W single-phase pumps with current draw not exceeding 10A during operation. The device is supplied with dry run protection. When no water is detected in the well, the device will stop the pump. The SK-15 automatic pump controller is equipped with 1" inlet and outlet. The device is supplied with a 1 m long cable with a plug and a 60 cm cable with a socket

PC-10P

Automatic pump controller for surface and deep well pumps. It can be used instead of a pressure switch and pressure When the tap is opened, a signal is sent to the PC-10P controller and it starts the pump. When the tap is closed, the PC-10P controller stops the pump. Compared to the other device, this automatic pump controller can operate with up to 2200 W single-phase pumps with current draw not exceeding 16 A during operation. The device is supplied with dry run protection. When no water is detected in the well, the device will stop the pump. The PC-10P automatic pump controller is equipped with 1" inlet and outlet. The device is supplied with a 1 m long power cable with a plug and a 60 cm long cable with a socket for connection with the pump

PC-20P

PC-30P

PC-30P - an analogous device for the PC-20P equipped with the automatic restart function

PC-16

Automatic pump controller for surface and deep well pumps. It can be used instead of a pressure switch and pressure tank. When the tap is opened, a signal is sent to the PC-16 controller and it starts the pump. When the tap is closed, the PC-16 controller stops the pump. The automatic pump controller can operate with up to 1300 W single-phase pumps with current draw not exceeding 10A during operation. The device is supplied with dry run protection. When no water is detected in the well the device will stop the pump. Compared to other controllers, the PC-16 has the restart function. The PC-16 has an automatic restart function. The device makes attempt to automatically restart the pump after stopping caused by dry running. If no water flows into the well, the device will stop the pump again. The cycle will be repeated several times a day from the first activation of the pump. This solution is best suited for automatic irrigation.

Easy-to-install. Supplied with a 1 m long power cable with a plug and a socket for connecting the pump. The PC- 16 automatic pump controller is equipped with 1" inlet and outlet.

PRESSURE SWITCHES

HYDRO-BLOCK (SK-13)

Devices protecting the pump against damage caused by dry running. The device will automatically stop the pump if the water pressure in the system drops below the cut-out level - 0.7 bar. The device has the RESET button. The pump is first activated by pressing the RESET button. When the system pressure exceeds 1.1 bar, the device will start operating in automatic mode. The device should operate in water supply systems with a pressure tank. The device can be directly connected to single-phase motor pumps. It can be connected three-phase motor pumps via a contactor.

The device is suitable for surface pumps only. Warning!!! The HYDRO-BLOCK pressure controller cannot be used instead of a pressure switch.

Pressure switches are designed for automatic starting and stopping booster sets with surface and deep well pumps equipped with electric motors.

The switches control the operation of the devices depending on the cut-in and cut-out pressure settings.

Switch body is made of durable plastic with copper or silver contacts. Depending on the model, the switches have different values of possible operating modes in a specified pressure range.

The PC-2 switch is additionally equipped with a pressure gauge and its design is based on a five-way discharge outlet so it can be used as a complete booster set fitting. PC-2 has 1" inlet and outlet.

The LCI and LCA switches can be used with 400 V \sim 3/50 Hz three-phase AC motors. In addition, the LCI is available with a nipple with 1/2" outer thread

LCA switches are made by Polish manufacturer of pumps in Grudziądz

/// PARAMETERS

| Name | Pressure range (Bar) | Max. amperage (1f/3f) | Voltage (V) | Inlet/outlet diameter (inch) | Thread type |
|-----------|-------------------------|--------------------------|----------------|---------------------------------|-------------|
| LCI 2 | 1,0 - 6,0 | 16A | 230/400 | 1/4 / 1/2 | GW / GZ |
| LCA 1 | 1,0 - 4,0 | 16A / 10A | 230/400 | 1/2 | GW |
| LCA 2 | 2,0 - 8,0 | 16A / 10A | 230/400 | 1/2 | GW |
| LCA 3 | 3,0 - 11,0 | 16A / 10A | 230/400 | 1/2 | GW |
| PC - SK/2 | 1,6 - 4,6 | 12A | 230/400 | 1/4 | GW / GZ |
| PC - 2 | 1,6 - 4,6 | 12A | 230/400 | 1 | GZ |
| PC - 9 | 1,6 - 4,6 | 12A | 230/400 | 1/4 | GW |

SOLENOID VALVES

VT series solenoid valves are suitable for controlling water flow in irrigation, heating and air conditioning systems. The solenoid consists of a ball valve and an actuator. The actuator is driven by a synchronous motor that controls the operation of the ball valve with rotation up to 90 degrees. The ball valves are available in two-way versions with diameters DN15, DN20 and DN25. The actuators are equipped with an indicator of open/close position.

SCOPE:

- 3 different connection diameters
- Use in various types of water installations
- High quality product
- · Warranty: 24 months
- Warranty and post-warranty service

TECHNICAL DATA:

- Electric driver equipment: AC 220-240V / 50Hz
- Power consumption: 6W (when the valve is open or closed)
- Motor type: synchronous motor
- Open/closed position switching time: 6~15s
- Operating pressure 1.6Mpa
- Closing differential pressure: < 0,2Mpa Ambient temperature < 40°C
- Isolation class: IP54
- Temperature of the medium: 2-80°C
- · Casing material: PA
- Medium: Cold/warm water or ethylene glycol solution 50%

IMAGE: Float switch

IMAGE: Flange

IMAGE: Membrane

IMAGE: Couplings

IMAGE: Control box

IMAGE. Pump fittings

ASSEMBLY ADHESIVE FOR FITTINGS

The adhesive for sealing all connections and joints between metal parts.

FLOAT SWITCHES

Electromechanical switches for controlling electrical equipment operation that depends on the liquid level. The switches are made of durable plastic and rubber electric wire (H07RN-F). The float switches are supplied with 60 cm, 5 m (with weight), and 10 m (with weight) power cables.

FLANGE

Galvanized steel spare part for pressure tanks

MEMBRANES

EPDM synthetic rubber membranes for pressure tanks. The membrane separates water and air part of the tank.

The membranes are made in Italy in accordance with the most demanding European. All membranes are certified for food contact. Sizes available: 24 L, 35 - 50 L, 80 L, 100 L, 150 L.

COUPLINGS

Aluminium couplings for connecting hoses.

CONNECTORS

Aluminium connectors for connecting pumps with hoses

CONTROL BOXES

Enclosed plastic control box for starting single-phase motors. The boxes have a built-in capacitor, over-current protection and a cable with a plug. Depending on type, the boxes are intended for 0.75kW/ 1.1kW/ 1.5kW/ 2.2kW 230V ~ / 50Hz motors.

| Name | Capacitor | Protection |
|--------|-----------|------------|
| 0,75kW | 35uF | 8A |
| 1,1kW | 40uF | 11A |
| 1,1kW | 45uF | 12A |
| 1,5kW | 55uF | 14A |
| 1,5kW | 60uF | 15A |
| 2,2kW | 70uF | 20A |
| 2,2KW | 80uF | 20A |

PUMP FITTINGS

Fittings available in cast iron or steel in sizes 1 $1\!\!\!/ \!\!\!/ 2$ and 2 "

FILTERS - HOUSINGS / CARTRIDGES

In-line filters for purification and treatment of water from own intakes and water supply networks. Universal filters made of durable materials to guarantee long-term and faultless operation. Each housing is equipped with a clamp wrench. Available types of cartridges: ceramic, carbon,

mesh, string wound and foam. Housings and cartridges are available in sizes of 5/2.5" and 10"/2.5".

Depending on the system requirements, the housings have the following inlets/outlets: 1"/3/4"/1/2".

Application: Households

| | TECHNICAL DATA | | | | | | |
|-------------------|---|--|--|--|--|--|--|
| Mesh filter | Mesh filter cartridge for filtering mechanical impurities, such as sand, rust and various types of sediments found in water. | | | | | | |
| String wound | String wound filter cartridge for filtering mechanical impurities. The cartridges are made of polypropylene string. Degree of filtration - 5um. | | | | | | |
| Ceramic filter | Ceramic filter cartridge for filtering mechanical impurities, such as sand, rust and various types of sediments found in water. Higher filtration accuracy compared to string and foam filters. | | | | | | |
| Foam filter | Foam filter cartridge for filtering mechanical impurities, such as sand, rust and various types of sediments found in water. Degree of filtration - 5um. | | | | | | |
| Carbon filter | Carbon filter block cartridge. Filter designed to reduce chemical compounds. It Improves the taste of water and removes any unpleasant odours | | | | | | |

Features:

- Housing made of reinforced polypropylene;
- Two O-rings to ensure leak-tightness;
- The transparent housing for visual assessment of contamination;
- · Complete with clamp wrench and mounting bracket:
- Max. pressure 8 bar;
- Temperature range 2-45°C.

Available sizes make the housings suitable for most standard cartridges

Our housings are suitable for the following cartridges:

- mechanical cartridges: foam and string;
- · reusable mechanical cartridges: mesh;
- Active cartridges: carbon block, carbon granulate, softening and ceramic.

APPLICATION:

- mechanical cartridges: main water supply pipes in apartments and small houses;
- carbon and softening cartridges: single water intake points, such as taps.

SAND FILTERS

Filters designed to remove mechanical impurities with minimum particle size of 120 microns. The filter is usually installed downstream the water supply point upstream the main water intake in the building.

These filters are often installed with surface pumps in order to protect the hydraulic components against abrasive mechanical impurities.

The disk cartridge protects against mechanical impurities such as sand and dust, but not against water deposits such as iron.

The main advantage is the durable design so both the housing and the cartridge can be used for many years. The filters have reusable cartridges that should be cleaned, e.g. by rinsing - the cartridge can be removed and rinsed under pressure.

The housing is made of impact and chemical resistant plastic.

Disk and mesh filters are used in agriculture, irrigation, gardening and domestic use to protect the pump and water supply system against contamination.

In addition to disk cartridges, mesh cartridges are available upon request.

| Name | Q max | Max. pressure | Filtration | Filtration area | Dimensions(mm) |
|------------------|-----------|---------------|------------|-----------------|----------------|
| ¾" Disc Filter | 75 l/min | 8bar | 120 | 160 | 130/ 176/ 83 |
| 1" Disc Filter | 100 l/min | 8bar | 120 | 160 | 173/190/89 |
| 1 ¾" Disc Filter | 200 l/min | 8bar | 120 | 265 | 230/ 250/ 120 |
| 1 ½" Disc Filter | 200 l/min | 8bar | 120 | 265 | 230/ 250/ 120 |

UV STERILIZERS

UV sterilizers are used to purify/disinfect water from bacteriological contamination that may exist in water sources, e.g. shallow wells or surface intakes. Disinfection is based on the bactericidal effect of the UV lamps in the sterilizer. The principle of their bactericide action is the absorption of UV light by the DNA structures of microorganisms. Proper selection of UV rays strength and exposure time can kill almost all microorganisms by destroying their DNA.

Water treatment with UV Irradiation is one of the most effective and safest methods of water purification because water is not purified by chemical compounds. Another advantage is the lack of influence on water taste and smell. Depending on the water demand, sterilizers can be equipped with 1 to up to 8 lamps. Lamps used in IBO sterilizers are manufactured by Philips and their service life is 8000h. The smallest sterilizers are designed for 1 l/min. flow, the largest available on request for flow up to 3600l/min. When using sterilizers with UV lamps, it is important to leave the lamps on even if there is no water flow because frequent on/off switching significantly reduces their life.

It should be remembered that the efficiency of the sterilizer depends largely on the quality of the water that flows through it, so we recommend to install in-line filters upstream the sterilizer to remove any mechanical impurities, such as sand. Moreover, the iron content and water hardness also affect the effectiveness of water purification. The iron in the water should not exceed 0.1 mg/l while the hardness of the water should be less than 110 CaCo3mg/l.

APPLICATION:

- Filtration of utility water
- Filtration of water in fish keeping
- Filtration of water in garden ponds
- Filtration of water in swimming pools

DETAILS:

- Protective tube made entirely of quartz for low

- AISI 304 stainless steel body

CABLE CONNECTION

When purchasing deep well and submersible pumps, our customers can choose to extend the electric cable by any length using a sealed cable connection. Depending on:

- · pump motor power
- number of wires
- · cable length to be connected,

our consultants will find the power cable with proper cross-section.

Each connection is manufactured in three stages:

- 1. Each wire is soldered separately to ensure proper current flow.
- After soldering, each wire is sealed with a heat-shrink tubing filled with glue. Then, the tubing is heat-sealed.
- 3. During the last stage, outer heat-shrink insulation is applied with more glue, which when heated fills the entire cable connection.

This procedure of connecting the cable guarantees long-term tightness and faultless operation. All connectors made by Dambat are covered by our warranty conditions.

INOX STEEL WIRE ROPE, POLYPROPYLENE ROPE

INOX ROPE: 7x7 stainless steel strand cores. The ropes can be used to suspend deep well pumps in wells and boreholes. The rope is made of AISI 304 stainless steel what makes is fully resistant to weather conditions. The ropes are supplied with stainless steel brackets and aluminium clamps.

PP ROPE: braided ropes made of polypropylene are flexible and lightweight alternatives to steel ropes. PP ropes are rotproof, resistant to oil, water, petrol and most chemicals. Polypropylene ropes are the only ropes that are not submersible. Ropes are available in sizes: 6mm, 8mm, 10mm.

| Name | Diameter (mm) | Cross-section | Max. Load (m) | Tensile strength (N/mm2) | Weight (kg) | Breaking load (kN) |

WELL TOP PLATES

Covers used for tight closing of deep well casing pipes through which the discharge pipes go in. Tight closing is provided by the gasket forced against the casing pipe. Tightly sealed well is protected against contamination and penetration of surface water. The well top plates are available in three versions made of plastic, steel and galvanized cast iron. All well top plates are equipped with a metal hook to support the pump, and a cable gland for tight routing of the power cable. Different sizes of connection threads allow the connection of pipes of different diameters. Depending on the design, well top covers are suitable for 110mm to 160mm casing pipes, i.e. for 4" and 6" wells.

Well top cover includes:

- Hydraulic connection (gasket) for connecting the discharge pipe
- Cable gland for connecting and routin the power cable through the well top cover
- Metal hook for attaching the pump support rope.
- Male thread or access hole tightened with a gasket.
- Seal for tightening the discharge pipe and the casing pipe.

| | Well seal type | | | | | | | | | |

| 160/60 mm | | Х | | | | | | | | |

WELL COUPLING

The well coupling is an innovative solution for easy installation/removal of deep well pumps in wells.

The brass coupling allows the pump to be hung directly in the well hole without the need for discharge pipe to be extended above the surface. Thus, it protects the well against contamination or penetration of surface water. Also, there is no need to use a concrete well casing where a discharge

pipe and a casing pipe with a well top plate are mounted.

The water drainage pipe is located below frost point and has a direct connection to the housing via a brass adapter. The coupling thus makes installation of deep well pumps very easy. All components are buried.

COUPLING FEATURES

- no need to use a concrete well casing and a well seal.
- protection of the well against contamination
- easy access to the well
- · very easy pump removal
- suitable for 2.5"/ 3" / 3.5"/ 4" pumps
- pipeline installed below the frost line
- available in 1"and 1 1/4" sizes

CENTRALIZER / TORQUE ARRESTOR

APPLICATION:

The centralizer is used to stabilize the pump inside the well pipe and to prevent the pump movement during the motor starting torque.

Design

The centralizer is made of durable rubber, the shape of which can be adjusted depending on the size of the well. The centralizer is cut longitudinally and has two clamps on each end for mounting it on the discharge pipe. By bringing the centralizer clamps closer to each other, its diameter will increase and it will adapt to the diameter of the well.

Installation:

The centralizer should be mounted on the discharge pipe. To install it, tighten the clamps so it does not move along the discharge system.

It is important to tightened the top clamp more than the bottom clamp so that the pump can be easily removed if necessary. The bottom centralizer clamp should be 10-20 cm above the pump. The centralizer should be adjusted to the diameter of the well, but not too tight to allow easier lowering of the pump into the well.

Properties:

The centralizer is designed for systems with 1"to 11/4" discharge pipes and 4" to 8" casing pipes. The clamps included are made of stainless steel.

PRESSURE REGULATORS

Brass regulators designed to regulate input pressure in water and air systems. They also protect the systems against pressure spikes. Compact size and low-noise operation. Pressure regulators are available in sets with pressure gauges.

| SIZE | Inlet/outlet (inch) | Weight (g) | Max. input pressure (bar) | Input pressure (bar) | Temperature (°C) | Insert | Filtr | L | н | А |
|------|------------------------|------------|---------------------------------|----------------------------|---------------------|--------|-----------------|------|-----|-----|
| DN15 | 1/2 | 510 | 16 | 1 - 6 | 0 - 85 | | | 79,5 | 63 | 92 |
| DN20 | 3/4 | 530 | 16 | 1 - 6 | 0 - 85 | | | 79,5 | 63 | 92 |

| 11/2 | 660 | (-15) - 120 | 16 | |
| 2 | 1000 | (-15) - 120 | 16 | |

FIVE-WAY DELIVERY OUTLET

Brass outlet for mounting pressure fittings.

Connection thread diameter: 1"- pump connection, 1" delivery system connection, 1"- anti-vibration hose connection to the tank, $\frac{1}{4}$ " - pressure gauge connection, $\frac{1}{4}$ " - pressure switch connection. Available outlets are 70 mm and 90 mm high.

| Connection / height | 70 mm | 80 mm | 90 mm | 120 mm |
|--------------------------------|-------|--------|-------|--------|
| Pump connection | 1" | 1 1/4" | 1" | 1" |
| Delivery system connection | 1" | 1 1/4" | 1" | 1" |
| Anti-vibration hose connection | 1" | 1 1/4" | 1" | 1" |
| Pressure gauge connection | 1/4" | 1/4" | 1/4" | 1/4" |
| Pressure switch connection | 1/4" | 1/4" | 1/4" | 1/4" |

PRESSURE GAUGE

The pressure gauge is used to measure the pressure in the system. Operating range is from 0 to 10 bar, ¼"inlet/outlet with male thread.

STOP VALVE FOR PRESSURE VESSELS

The valve is intended for mounting pressure vessels in central heating and hot water systems. Pressure vessels can be quickly mounted or dismounted for maintenance or replacement. The valve prevents the liquid outflow from the system during vessel removal.

Max. pressure: 10 bar Max. temperature 100oC

FAST CLAW COUPLING

Couplings for installation with suction hoses. They are resistant to negative pressure created between the pump and the hose. Available sizes:

- 3/4" 1"
- 1 1/4"
- 1 1/2'

Couplings are made of brass and come with rubber seal.

WELL FILTERS

Drill pipe filters for dredging ring wells or used as an alternative, designed to protect pumps against damage caused by sand. The filters can be used with various types of pumps, from hand pumps to surface pumps and booster sets, both single-stage and multi-stage. The screen is not suitable for ramming; it should be anchored freely in the ground.

The filter consists of 3 components:

- A cast-iron mandrel with a point on one side
- · Drill pipe made of galvanized steel
- · Threaded end for water system connection

PARAMETERS

- Overall length: 130cm
- Point length: 20cm
- Filter diameter: 50 mm
- Connection diameter: 11/4"

APPLICATION

- · Ring well dredging
- · Ring well filtration
- · An alternative for ring wells

ELECTRICAL CABLES

H07RN-F rubber heavy duty power and control cable 450/750 V, for in industrial and agricultural applications. Class 5, from -25°C to 60° C, oil resistant, flame retardant

Compliance: PN-EN 60228 / PN-EN 60332-1

FEATURES

- Resistant to low temperatures
- Resistant to mechanical damage
- Oil resistant
- UV radiation resistant

APPLICATION:

- · Hand and power operated equipment
- Medium mechanical loads
- Industrial and agricultural applications
- In dry, wet and humid environments

Depending on the batch, the dimensions may differ from the data specified below.

| Nominal voltage | 450/750V |
|-------------------------------|---|
| Conductor material | copper |
| Number of conductors | 3/4 |
| Identification of conductors | Colour |
| Type of cores | Multi-strand (flexible) |

GARDEN HOSES IBO GARDEN

Garden hoses made of durable materials, with high resistance to mechanical damage and UV radiation. The hoses are resistant to various weather conditions. Due to their resistance over a wide temperature range, hoses can be used both in the summer and mild winter. An additional advantage of the hoses is their flexibility that prevents the hose from cracking and makes its operation much easier.

SPECIFICATION

- · PVC materials
- Can be used all year round, operating temperature range $-10/+50^{\circ}\text{C}$
- Three-layer green hose
- · Cross-woven polyester braid
- · Resistant to UV radiation
- · Risk of settling of algae inside the hose has been eliminated
- · Flexible structure
- Burst pressure: 20 bar

Hoses are made of high-quality PVC. It is strong and exceptionally durable, also in terms of resistance to high temperatures.

- Layer I inner, protective layer made of black PVC, resistant to UV, prevents settling of algae inside the hose
- Layer II cross-woven polyester braid
- Layer III reinforced, transparent-green outer layer made of soft PVC

APPLICATION:

- for watering
- for pumping water
- for sprinkling

/// PARAMETERS

| Diameter | | Length | |
|----------|------|--------|------|
| 1/2" | 20 m | 20 m | |
| 3/4" | 30 m | 30 m | 30 m |
| 1″ | 50 m | 50 m | 50 m |

FLEXIBLE GARDEN HOSE

Flexible garden hose expands up to three times of its length under water pressure. Comes with a gun featuring 7 modes of operation and a trigger lock for continuous operation without holding the gun in your hand. The hose does not kink when expanding.

We offer three hose lengths:

- initial length 10m expandable to 30m
- initial length 15m expandable to 45m
- initial length 20m expandable to 60m

ANTI-VIBRATION HOSES/CONNECTORS

Anti-vibration hoses with elbow:

Flexible anti-vibration hoses made of EPDM rubber approved for contact with drinking water, in a metal braid protecting the discharge pipe. Hoses have brass connections - an elbow with a rotary union and gasket on one end, and a nipple on the other end. The 30 cm hose has an external diameter of 19 mm and a female x male thread (1"x 1"/2"). The 54 cm hose has an external diameter of 26 mm and a female x male thread (1"x 1"). The 60 cm, 70 cm and 80 cm hoses have an external diameter of 32 mm and a female x male thread (1"x 1").

APPLICATION:

Water distribution in heating and air-conditioning systems, domestic water systems. Flexible connections of pumps and pressure tanks, and all connections for distributing water of up to 90°C.

Anti-vibration connectors (straight)

Flexible anti-vibration connectors made of EPDM rubber approved for contact with drinking water,

in a metal braid protecting the discharge pipe. Connectors with brass connections - an union with a gasket on one end, and a nipple on the other end.

The offer includes 30, 40, 50, 60, 80, 100 cm connectors with female x male (1" x 1") threads.

APPLICATION:

Water distribution in heating and air-conditioning systems, domestic water systems. Flexible connections for distributing water of up to 90° C.

M PARAMETERS

| Elbow hoses | Diameter | Straight connectors | Diameter | | |
|-------------|----------|---------------------|----------|--|--|
| 30 cm | 18 mm | 30 cm | | | |
| 54 cm | 27 mm | 40 cm | | | |
| 60 cm | | 50 cm | 22 | | |
| 70 cm | 22 | 60 cm | 32mm | | |
| 80 cm | 32 mm | 70 cm | | | |
| 100 cm | | 80 cm | | | |

SUCTION HOSES

4 and 7m plastic suction hoses for supplying water from various surface intakes using suction pumps.

The hose has a suction strainer on one end to prevent larger dirt, such as leaves from entering the system. On the other end, the hose has a 1" union joint to connect the hose to the pump inlet.

APPLICATION:

Water intake from dug and deep wells, lakes, rivers and reservoirs.

SUCTION HOSES – REINFORCED

Transparent light weight steel-wire-reinforced small-bend-radius hose. Reinforced hoses are used as suction and discharge hoses. They are resistant to negative pressure and can be used in adverse weather conditions.

APPLICATION

Suitable for sucking and transporting water, oil and powder in manufacturing plants. Reinforced hoses are used in agriculture, civil engineering, irrigation, and industrial applications in systems supplying water and oil to installations and equipment. It can be used instead of rubber hoses and metal pipes.

Material: Helix PVC: steel wire OPERATING TEMPERATURE: from -5 °C to +65 ° C

FEATURES:

- Very smooth inner wall and outer surface
- Reinforced with steel wire spiral
- Good resistance to crushing, abrasion and most chemicals
- Excellent resistance to pressure and negative pressure
- Non-toxic and odourless

| Reinforced suction hose | | | | | | | | | | |
|-------------------------|---------------|-------------------------------|----|-----------------------------|------------------------|--|--|--|--|--|
| Diameter | Inner (mm) | Outer Length (mm) (m/roll) | | Operating pressure (bar) | Test pressure (bar) | | | | | |
| 3/4" | 19 | 23 | 50 | 5 | 13 | | | | | |
| 1" | 25 | 30 | 50 | 5 | 13 | | | | | |
| 1-1/4" | 32 | 38 | 50 | 4 | 12 | | | | | |
| 2" | 50 | 58 | 50 | 4 | 12 | | | | | |
| 3" | 76 | 90 | 30 | 4 | 12 | | | | | |

SUCTION HOSES - HELIX

 $Light weight, flexible\ hose\ for\ delivery\ and\ suction\ with\ increased\ resistance\ to\ UV\ radiations.$

Their important feature is resistance to negative pressure.

 $\label{lem:helix} \textit{Helix}\ \textit{hoses}\ \textit{have}\ \textit{lower}\ \textit{weight}\ \textit{compared}\ \textit{to}\ \textit{reinforced}\ \textit{hoses}.$

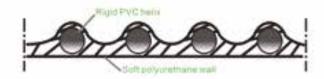

APPLICATION:

In industrial applications, agriculture, for irrigation and civil engineering. It can be used instead of rubber hoses and metal pipes. It is suitable for transporting pellets, powder, grain, water in irrigation systems, as well as water and oil in industrial systems.

Material: Helix PVC: PVC wire OPERATING TEMPERATURE: from -5 °C to +65 °C

FEATURES:

- Very smooth inner wall and outer surface
- Reinforced with steel wire spiral
- Good resistance to crushing, abrasion and most chemicals
- Excellent resistance to pressure and negative pressure
- · Non-toxic and odourless

| | U | V resistant hel | ix suction hose | 2 | | |

INAGE PIC Hore INAGE PIC HORE

Flexible discharge hoses for pumping water and sewage. Available versions:

- Eco flexible hose blue discharge hose with a maximum permissible pressure of 2 bar, in 50m sections, available sizes: 1"/2"
- PCV hose blue discharge hose with a maximum permissible pressure of 2 bar, in 50m sections.
- Available sizes: 04/09/20172/2.5/3
- With the weave braid (fire hose) and the weave braid with fast connections a white hose with a maximum permissible pressure of 8 bar. Available sizes: 1.5" / 2"

APPLICATION:

Drainage of excavations and flooded rooms, pumping sewage, water from lakes, ponds, rivers with submersible pumps.

| Model | 1" | 1 1/4" | 1 1/2" | 2" | 3" | Max. pressure |
|--------------------------------------|-----|--------|--------|-----------|-----|---------------|
| Eco rubber hose | 50m | x | x | 50m | x | 2 bar |
| Blue rubber hose | 50m | 50m | 50m | 50m | 50m | 2 bar |
| Woven hose | 30m | x | 30m | 20m / 30m | x | 8 bar |
| Woven hose with fast connections | х | х | x | 20m / 30m | x | 8 bar |
| Woven hose with MAX fast connections | х | x | x | 20m / 30m | x | 8 bar |

Swimming pool hoses - rolls:

Swimming pool hoses designed for connecting various pumping, filtering, vacuum and cleaning accessories and fittings. The hoses are made of high density polyethylene (HDPE), which provides flexibility, low weight and high durability. Material used ensure resistance to UV radiation, chlorine and adverse weather conditions.

Hoses are available in 50m rolls with 32mm and 38mm diameter, and any length being a multiple of 1m can be cut off.

Swimming pool hoses - sections:

Swimming pool hoses designed for connecting various pumping, filtering, vacuum and cleaning accessories and fittings. Hoses are available in 50m sections with 32mm and 38mm diameter with swivel connectors.

Operating temperature range: from -15 $^{\circ}$ C to + 60 $^{\circ}$ C Features:

- Very flexible and floating
- Smooth inner surface
- · Crush resistant structure
- · High tightness
- Small bend radius
- Tear resistance
- · High tensile strength
- · Available in rolls or 11m sections with adapters.

| Model | Diameter | Length | Adaptery | Can be cut to length | Operating negative pressure | Test pressure |
|-------------------|----------|--------|----------|-------------------------|-----------------------------|---------------|
| 32 mm hose (roll) | 1 1/4" | 50m | No | Yes | 0,8bar | 4bar |
| 38mm hose (roll) | 1 1/2" | 50m | No | Yes | 0,8bar | 4bar |

Pressure loss / discharge resistance when using galvanized steel pipeline. Pressure losses along the 100 m horizontal section
Pressure loss when using a different pipeline (ratio) Cast iron pipeline x 1.4
Stainless steel pipeline x 0.8
Aluminium pipeline x 0.7
PE / PVC pipeline x 0.65

Pressure systems

IBO products are a reference for quality and reliability in the pump sector in Poland.

Dambat offers a wide range of pressure systems, therefore we are able to deliver products that are perfectly adapted to customer requirements. IBO products can be adapted to virtually every household application and budget.

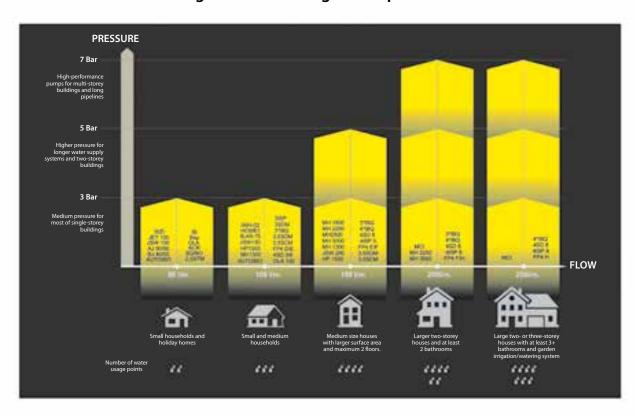

The selection of a product that is the most suitable for a given application depends on many factors, including:

- What is the water demand (flow in I/min. or m³/h)?
 The demand will largely depend on the number of taps or pressure points that can be used simultaneously.
- What is the pressure demand?
 Due to losses during pumping through both vertical and horizontal sections of the pipeline, as well as during supplying water at a certain pressure to higher floors or in larger systems, the demand for pressure generated by the pump will be greater than in case of single-family houses and small systems.

A simple diagram to assist in the selection of suitable pumps is presented below. It takes into account flow and pressure demand depending on the size of the building and the number of water usage points.

Diagram for selecting device parameters

Sewage pumps

Dambat offers a wide range of submersible pumps for individual, commercial, agricultural and industrial applications. IBO pumps are reliable devices monitored at every stage of manufacturing process, made of robust materials, which results in increased durability compared to competing products.

in order to make the installation of devices and their operation easy and faultless, Dambat offers a wide range of devices with various parameters and features suitable for different systems. Selected single-phase pumps are available with and without a float switch. Some sewage pumps can be installed with a guide rail system.

| | Type of impurities: | Pump type | Pumps for clean water | Pumps for slightly contaminated water (swimming pool, rainwater, drainage of flooded rooms) | Pumps for dirty water contaminated with solids of up to 30 mm diameter. (swimming pool, rainwater, drainage of flooded rooms) | Pumps for dirty water contaminated with solids with diameter from 30 mm to 50 mm (slurry, liquid waste, sewage) | with cutting system for domestic raw sewage (liquid waste, | Pumps for agricultural and industrial for raw sewage (slurry, liquid waste, sewage) | Pumps for dewatering and drainage (drainage ditches, construction sites, mines, tanks containing sand or sludge) | Pump for slurry contaminated with soilds (raw sewage, tanks with sediments) |

Useful information

If you need assistance in selecting a pump, please check the data below and contact us.

Most of our distributors are professional companies operating in the pumping sector and having proper knowledge in scope of the selection of pumping devices and equipment. However, if you have difficulties is selecting the right device, please answer the following questions and contact us, our technical advisers will try to find a product that suits your requirements.

Please answer the following questions

| 1. What will the pump be used for? | 7. Lake |
|--|---|
| Increasing system pressure | Horizontal distance from the well to the pressure tank(m) |
| Garden watering/sprinklers | Level difference between the well opening and the destination point |
| • Irrigation | 8. What is the pipeline made of? |
| Heating systems | Galvanized |
| Sewer system/liquid waste | □ • PCV/PE |
| Dewatering/drainage | Stainless steel/copper |
| Water transfer | Discharge hose |
| Firewater systems | Other (please specify) |
| Other (please specify) | |
| | 9. Discharge pipe diameter (mm) |
| 2. Required operating pressure at specified flow Bar | 10. Required power source? |
| 3. Required flow at specified pressure I/min or | Electric motor (230V) |
| 4. What is the planned or existing water intake? | Electric motor (400V) |
| Deep well | Electric motor (12V) |
| Ring well | Internal combustion engine |
| Suction pit | Piston (hand) pump |
| • Instalacje | PTO shaft |
| Rainwater tank (foldable) | Other (please specify) |
| River, stream, canal | |
| • Lake | 11. Is a pressure tank required? If yes, please specify what type. |
| Water supply system | □ • 24 □ • 150 □ • 500 |
| Excavations | □ • 50 □ • 200 □ • 1000 |
| Other (please specify) | □ • 100 □ • 300 |
| | 12. Is control required? If yes, please specify what type. |
| 5. Water type | Frequency converter |
| Clean water | Pressure switch |
| Dirty water | Automatic flow switch |
| Water with sand | Protection |
| Sewage/liquid waste | Other (please specify) |
| Other (please specify) | |
| | |
| 6. Deep well | |
| Internal diameter of the well pipe(mm) | WATER USAGE POINT |
| At what depth is the water surface?(m) | |
| Well output (we recommend to carry out survey)(l/min) | |
| Horizontal distance of the well to the pressure tank(m) | |
| Level difference between the well opening and the destination point(m) | 1 |
| 7. Ring well | |
| At what depth is the water surface?(m) | |
| Well output (we recommend to carry out survey)(l/min) | WATE |

WATER SURFACE

Horizontal distance of the well to the pressure tank(m)

Level difference between the well opening and the destination point (m) $\,$

CONVERSION FACTORS

Sample water demand depending on application is shown below.

It should be taken into consideration that the demand may differ depending on the economic and geographical development, therefore the data presented below should be used for informative purposes to assist in the selection of the device. In order to pump water from intakes with surface pumps, negative pressure (so-called suction) is required.

In order to assist in the selection of the device, the factors that affect the suction height are presented below:

- Altitude: atmospheric pressure decreases with increasing altitude.
- Flow: the higher the flow rate through the pump, the lower the negative pressure created by the pump.
- Water temperature: the higher the water temperature, the lower the suction capacity.
- · Losses: not only the vertical section on which the water surface is located but also the horizontal section should be taken into account.

The height above sea level at which the pump operates is also very important.

| HOUSEHOLD | HOUSEHOLD |
|--|---|
| Shower: 8-10 l/m. at 1.4 bar | Cattle: 30-55 litres / day |
| Small lawn sprinkler: 15-20 l/m. at 1.4 bar | Dairy cows: 30-55 litres / day |
| 1/2" tap: 12-18 l/m. at 1.4 bar | Sheep: 30-55 litres / day |
| 3/4" hose + 1/4" nozzle: 40-50 l/m. at 2.1 bar | Pigs: 30-55 litres / day |
| 1" hose + 3/8" nozzle: 70-90 l/m. at 2.1 bar | Pigs: 30-55 litres / day Horses: 30-55 litres / day |
