Pure from the start

Q+ RANGE: PURE FROM THE START

Gekatex is one of the very few wipe manufacturers in the world who makes its very own cleanroom products, starting from the fiber and not from an already made cloth.

All the following operations are made in-house: knitting, pre-washing, heat-setting, cleanroom conversion and finally cleanroom laundered and packaging.

Our processes are made to ensure that the products are pure from the start, ensuring cleanroom standards are met.

PROTOCOL

CONTAINERS STERILIZATION

Controlled environments like pharmaceutical and medical device industries require perfectly aseptic tools and materials.

To achieve this, items go through a sterilization process, ensuring that all bacterial and microbial activities are removed. This is usually done via an autoclave.

Proper wrapping and loading of glassware and containers in the autoclave is essential to guarantee an effective sterilization.

Gekatex has developed a wide range of autoclavable covers to protect open items along the steam sterilization process.

BOWL COVERS

Available in a large variety of sizes, they can cover openings from small pipes and hoses, to beakers and flasks, up to large processing vessels.

They enable fast container preparation for sterilization, as well as a safe handling of sterilized material.

BENEFITS

- ✓ Breathable fabric
- ✓ Increased steam penetration during sterilization
- ✓ Fast drying out
- ✓ Preventing contamination
- ✓ High tear resistance fabric
- ✓ Faster sterilisation preparation
