Green Star
Universal cleaner

Highly concentrated, phosphate- and solvent-free, alkaline universal cleaner. Universally usable for the areas of workshop floor and industrial cleaning, interior and exterior cleaning of cars and trucks and engine cleaning thanks to its enormous dirt and oil carrying capacity. Special corrosion inhibitors ensure high material compatibility with regard to sensitive components such as, eg, anodised aluminium. For use in spray extraction and other carpet cleaning devices we recommend the addition of Kocentschäumer foam inhibitor. Optimally suited as well for biological service water treatment plants. Quick-separating and tested in accordance with ÖNORM 5105 (test concentration 10% solution). VDA conform to class A: reaction time max. 5 min, max. application concentration 1:3.

Magic Wheel Cleaner
Acid-free rim cleaner

Magic Wheel Cleaner is our powerful, viscous, acid-free rim cleaner that provides innovative performance to mildly and thoroughly clean rims and rim wells. Its reactive component dissolves iron particles with characteristic red discolouration. Special dispersing agents gently remove stubborn dirt from surfaces. The viscous setting ensures that the sprayed-on Magic Wheel Cleaner adheres excellently to the surface. Dirt remains bound and the cleaner does not dry up, even after an extended application time.

NanoMagicShampoo
Nano preservative shampoo

High-tech shine shampoo with premium preservation for manual car wash. The unique combination of innovative cleaning and sealing components forms a long-lasting dirt- and water-repellent nano-layer (lotus effect). The treated surfaces are protected against aggressive environmental influences. After rinsing off, the water film breaks up immediately and thus supports the fast drying of the vehicle. NanoMagicShampoo is especially suitable for the care of the vehicles sealed with 1K-Nano, because the contained sealing components connect themselves firmly with the 1K-Nano network. Thus the service life is substantially extended with regular application (every second to third vehicle wash). Other polishes or sealants applied in advance are also renewed and not worn off, as with conventional car shampoos.

Motorplast
Special engine conserver

Naturally shiny, water-displacing conserver for engines, housing parts, rubber hoses and power units of cars, commercial vehicles, etc., with pleasant fragrance. Treated parts regain their new appearance. The complete drying (no lubricating film) prevents dirt sticking. The power units are protected from corrosion and environmental factors by the permanently elastic protective film. Suitable for use on dry and wet surfaces. Temperature-resistant to 250°C. With Daimler approval.

KochChemie®
ExcellenceForExperts.

De

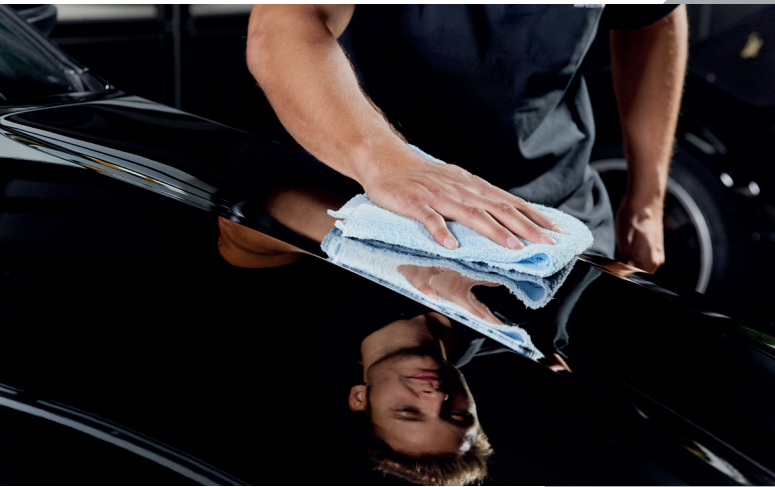

Complete assortment for vehicle care.

We are the leading complete system provider in the field of new and used car detailing. Many cleaning and care products comply with worldwide car manufacturer approvals and are optimized to meet our customers' requirements and environmental specifications.

As the market leader, we assist the largest car detailing companies in the industry, as well as thousands of regional specialists, with the best products and application know-how.

Professional know-how for your success.

Our expert staff will be happy to support you on site in application, environmental and work safety issues. As a member of the Vocational Training and Examination Committee of the Federal Association of Vehicle Preparation (BFA), we have developed a unique training system. At our Competence Center in Unna, we offer our customers individual in-house training courses as well as two-day training courses. It is close to our heart to pass on our specialist knowledge to the experts in the industry and to actively exchange information with our customers directly in theory and practice about the latest trends, findings and needs.

An evolutionary PolishSystem.

With our holistic PolishSystem, we create a simple, efficient system for paint preparation. With our two-step PolishSystem, we evolved paint treatment in 2018. With the aim of increasing the cutting degree in all polishes while maintaining the gloss level at the same high level, the polishes were adapted to the newly developed, more scratch-resistant paint systems. To achieve the best possible result in just two steps, our polishes are matched to our specially developed pads. For an even more economical approach to car detailing, we have developed an efficient one-step PolishSystem to complement our two-step PolishSystem. With our innovative One Cut & Finish

P6.01 machine polish, we provide a product that combines the optimum ratio of abrasiveness and gloss. Here, too, we follow the system idea: The orange One Cut Pad is optimally matched to the One Cut & Finish P6.01 with its reticulation and cell count. The polishing compound and pad complement each other perfectly to quickly produce a high-gloss surface. In just one step, scratches and sanding from grit size P2000 are effectively removed and the surface is simultaneously sealed by the carnauba waxes contained. The bottom line: Maximum result with minimum time and effort.

One-step system

One Cut & Finish P6.01

Scratches and sanding traces from 2,000 grain

Dual action polisher or long stroke dual action polisher (min. 15 mm stroke) with moderate speed and moderate pressure. Apply in a crosswise motion.

Step 2a

Micro Cut M3.02

Fine scratches and holograms (following 3a or 3b)

Orbital polishing machine (PO5000C) with forced rotation (highest level) and moderate pressure in a crosswise motion until a transparent film appears.

2b

Micro Cut & Finish P3.01

Fine scratches and holograms incl. sealing (as the last step)

Step 1a

Heavy Cut H9.01

Deep and medium scratches and sanding traces from 1200 grain

Rotary polishing machine (Flex PE 14-2 150) at approx. 1300 rpm. Apply in a crosswise motion.

Step 3a

Ceramic Allround C0.01 / 1K-Nano

Long term sealant

According to the application description, process by means of orbital polishing machine (PO500C) without forced rotation or manually.

1b

Fine Cut F6.01

Alternative: Lambswool pad

Medium scratches

Rotary polishing machine (Flex PE 14-2 150) at approx. 1300 rpm. Apply in a crosswise motion.

3b

Lack-Polish grün P1.01

Sealant

The Finishing Touch — High-Quality sealing products.

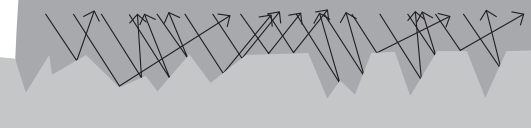

Water beading redefined.

A long-lasting protective layer that shields the surface from environmental influences: This is what the first ceramic sealant in Koch-Chemie's product portfolio promises. With Ceramic Allround C0.01, we now offer a high-quality ceramic sealant, which

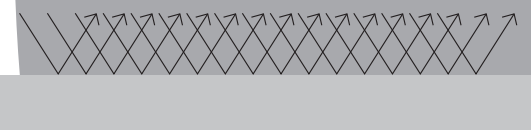

optimizes and permanently protects surfaces with little effort. The ceramic coating contributes significantly to maintaining or increasing the value of the vehicle through its various advantages.

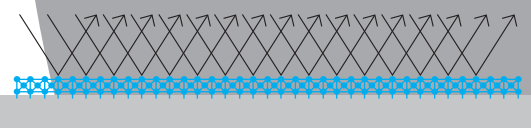

Ceramic Allround 75ml 505001
Ceramic coating

A — Untreated paint: Diffuse light reflection

B — After paint preparation: Perfect light reflection and smoothness

Reactively bonded ceramic protection: magnified 1000 times compared to A/B

Properties of Ceramic Allround C0.01

- Long-lasting protection of the surface with a service life of 18-24 months
- Smooth, hydrophobic surface with lotus effect
- Gloss stable even after use of acid and alkaline cleaners
- Easy-to-clean properties, so that dirt adheres less well and the surface can be cleaned gently
- Protection of the sealed surface against environmental influences such as UV radiation, road salt, bird droppings and rust
- Protection of the clearcoat against corrosive and acidic products in pH range 5 to 12
- Easy processing

The fastest way to the perfect finish.

S0.02 9.9
Spray Sealant
Spray sealant for painted surfaces

This bottle combines brilliant radiance, color deepening and hydrophobicity to spray on. In just one step, our efficient spray sealant achieves a fast high-gloss and velvety finish. This makes it a shine booster. Spray Sealant can be sprayed directly onto the dry paint surface and, after a brief flash-off, is polished out with a clean micro-fiber cloth. The product properties are effective immediately after polishing out: The sealing components create a perfect water-beading effect, the paint has a clearly visible color deepening and the surface is high-gloss. And all this without any dwell time. Not much product is needed for a high-quality gloss result, which makes our Spray Sealant very economical. To maintain the finish for as long as possible, a gentle car wash, ideally hand wash, is recommended.

500ml 427500

WO.01 9.9
Hand Wax
Wax sealant with carnauba wax

If the vehicle deserves a special treatment, this Hand Wax is used – for high gloss and special hydrophobicity. High-quality Carnauba waxes provide a long-lasting sealed and protected paint surface in our first wax sealant. Applied with care and the appropriate applicator sponge, the sealing components create a smooth surface with very good hydrophobic properties. The paint is clearly more brilliant and highly glossy. External plastic components can also be maintained and sealed with Hand Wax. Our Hand Wax only needs to be applied thinly and is therefore very economical.
