

Small, but oh my!

You could say that the pads in our PolishSystem have had a new addition to the family. The pads, which are 45 mm in diameter, can be used to polish small surfaces in a simple and targeted manner. Just like their big siblings, the pads are perfectly matched to the respective polishing compounds. Our color coding tells you at a glance which pad to choose for the red Heavy Cut polishing compound or purple Micro Cut polishing compounds. The Flex PXE 80 is the right machine for these small pads and therefore the ideal complementary device for every vehicle refurbisher, painter and the spot repair sector.

Flex PXE 80 for spot repair

The Flex PXE 80 is the ideal complementary device for every vehicle refurbisher, painter and the spot repair sector. Flexible and easy as never before from flower sanding to hologram-free finishing with one unit. It is ideally suited for rotary and eccentric free-running work with 3 and 12 mm strokes. It has an innovative, tool-free quick-change system for exchanging the rotary and eccentric drive types. The Flex PXE 80 is equipped with a damped special Velcro pad for polishing and grinding. The ergonomic and flexible grip options thanks to the optimally placed SoftGrip surfaces allow the device to fit perfectly in the hand.

Set Flex PXE 80 with two 10.8V battery packs and fast charger

KC-Refresher

The KC refresher is a component of an innovative system for sustainable odour elimination completely without ozone. By hot spraying the KC-Refresher Fluid, the device creates steam in the vehicle interior, the drops of which are so small that they float through the vehicle interior and create a thick mist. This mist permeates into the corners of the interior and, in particular, into the ventilation system and the air conditioning evaporator and thus removes even the strongest of odours permanently. Application only takes approx. 20 minutes. Can also be used in other areas such as in buildings. Due to the combination of substances and the hot spraying, application is not sensitive to temperature or humidity. The vehicle can be used shortly after application.

Cyclone AZ2000

Cyclone AZ2000  
999605

Turbo cleaning gun is an innovative cleaning tool that chooses powerful turbine technology as the motor mechanism to create the tornado effect. Its rotation speed can reach a maximum of 8,000 revolutions per minute. In addition, the air hopper is adjustable to control the rotation speed of the rotation set. Different cleaning results are achieved by adjusting the rotation speed. To significantly extend the life cycle of the rotation set, it is designed with rolling bearings so that there are no contact points between the outer metal spray tube and the air hopper. As a result, the air hopper cannot break or be damaged when the rotation set rotates. Rotation speed adjustable 1000 to 8,000 rpm. Powerful rotation method by turbo motor with roller bearings. Strong and sturdy mechanical design. Creative and controllable method of rotation speed. Multifunctional system: cleaning wet or dry possible to remove dust or dirt from surfaces. Engine compartment, wheels, carpets, dashboards, plastics, upholstery.

# The decisive detail more.

Maximum cleaning and care results require not only the use of high-quality products, but also professional accessories specially designed for the respective application. Each article is subjected to extensive practical testing by our application technicians and a selection of customers before we include it in our range.

## Thinking in the system.

As a result, we can offer you coordinated system solutions in which chemistry, accessories and application technology complement each other perfectly. Together with our partners, we therefore also individualize accessory products or develop our own products, as in the case of our polishing pads. Only in this way the

best possible results can be achieved in the interaction of the components chemistry and accessories. If only a spare part is needed for an existing accessory, we can also supply this. Our expert field service staff will advise you comprehensively on site.

# The Fantastic Seven.

## The Towel System

Every towel a hero. Whether you need streak-free drying, easy buffing off or yet even application - our heroic towels save every situation. **Superpowers in the blink of an eye!**

**KCX allrounder towel**  
Ideally suited for all work in professional vehicle preparation.

999626 40 x 40 cm

**KCX pro allrounder towel**  
Due to its high absorbency, it is ideally suited for all activities in professional vehicle preparation.

999627 40 x 40 cm

**KCX polish & sealing towel**  
The non-chainstitched undisputed number 1 among microfibre cloths with two differently structured sides. During ultrasound cutting the fibres are interlaced millions of times at the edge so that the cloth does not fray even after 50 machine washes. The unrivalled soft quality without fluff and silicone guarantees a perfect high-gloss finish without streaks and microscopic scratches.

999241 40 x 40 cm

**KCX coating towel & KCX application towel**  
With the KCX application towel and the matching applicator block, our Ceramic Allround C0.01 ceramic coating can be easily applied to the vehicle paint. For the subsequent buffing out of sealing products, the KCX coating towel is the optimal towel.

999619 KCX coating towel, 40 x 40 cm  
999620 KCX application towel, 10 x 10 cm

**KCX glass towel**  
The perfect towel for streak-free cleaning and drying of glass. The unique weave guarantees excellent dirt loosening ability and streak-free drying in combination with Glass Cleaner or Allround Surface Gleaner. In combination with Glas Star the towel is also ideal for removing wax residues and greases. The 320g/m² heavy towel with its strong overlapped edge is very durable and allows repeated washing. The set contains 2 grey and 2 yellow towels (e.g. for wet-cleaning and drying).

999363 40 x 40 cm

**KCX drying towel**  
The absorbent cloth with waffle structure for fast and residue-free drying of paint, glass and plastic surfaces. After the use of a squeegee dryer a run-off shampoo or an automatic car wash one cloth is sufficient, in the case of very wet surfaces, work with two cloths. 440g/m². Set of 2 towels.

## Our dreamteams

With our holistic PolishSystem we create a simple, efficient system for paint preparation. With our two-step PolishSystem, we evolved paint treatment in 2018. With the aim of increasing the cutting degree in all polishing compounds while maintaining the same high level of gloss, the polishes were adapted to the newly developed, more scratch-resistant paint systems. In 2020, we developed the efficient one-step PolishSystem for an even more economical approach to vehicle preparation. With our innovative One Cut & Finish P6.01 machine polish, we provide a product that combines the optimum ratio of abrasiveness and gloss and thus prepares the paint in a single step.

In order to achieve the best possible result in only two steps, our polishes are matched to our specially developed pads. The

height of the pads of 23mm ensures good handling as well as high stability during the polishing process. The special foam material, produced especially for us, has a special density, which ensures a long-lasting compression hardness. This ensures that the polishing pads retain their shape for a longer period of time. The optimal reticulation and cell count contribute to improved abrasiveness and hygiene factors. The milled edge around the pad gives it more flexibility to fit contours even better.

Differentiation between the uniform black pads is made by the fleece, which is matched to the color code of the polishes, thus offering the user even greater process reliability. The dust-free individual packaging is also marked with the color code from the PolishSystem. Chemistry and accessories work hand in hand.

### One-step system

One Cut & Finish P6.01

Scratches and sanding traces from 2,000 grain

Dual action polisher or long stroke dual action polisher (min. 15 mm stroke) with moderate speed and moderate pressure. Apply in a crosswise motion.

### Step 1a

Heavy Cut H9.01

Deep and medium scratches and sanding traces from 1200 grain

### 1b

Fine Cut F6.01

Medium scratches

Alternative: Lambswool pad

Rotary polishing machine (Flex PE 14-2 150) at approx. 1300 rpm. Apply in a crosswise motion.

### Step 2a

Micro Cut M3.02

Fine scratches and holograms (following 3a or 3b)

### 2b

Micro Cut & Finish P3.01

Fine scratches and holograms incl. sealing (as the last step)

### Step 3a

Ceramic Allround C0.01 / 1K-Nano

Long term sealant

### 3b

Lack-Polish grün P1.01

Sealant

Orbital polishing machine (PO5000C) with forced rotation (highest level) and moderate pressure in a crosswise motion until a transparent film appears.

According to the application description, process by means of orbital polishing machine (PO500C) without forced rotation or manually.
