

LIGHTS UP **YOUR** WAY

# DOWNLIGHT

Life-saving lighting system downlight.

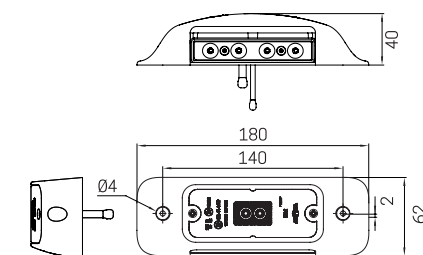

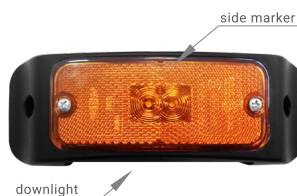

**See clearly now - BE SEEN!**

Light around the vehicle.

The lamps have a special authorisation from the Department For Transport to be used on all UK roads.

# 0502

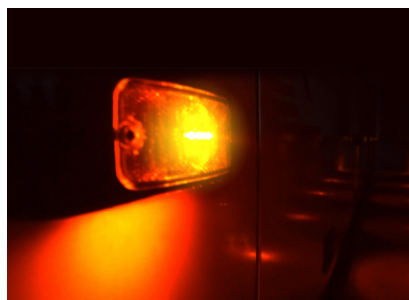

*"When operating local council vehicles they are often amidst vulnerable road users in streets or towns etc. All work vehicles and their operatives have a duty of care to the surrounding public and themselves with regards to public and personal safety. The Vehicle Avoidance Lights (VALs) can project an 'area of high risk' around the vehicle which should be kept unobstructed. By doing so this helps to ensure the safety of those in close proximity to the vehicle."*

*Jimmy Beam Downlights*

## NEWPRODUCT

Helps other motorists to maintain a safe clearance from vehicles and semi-trailers when driving in poor visibility. Effective illumination downwards and adjacent to the sides of the vehicle, is a crucial ingredient towards the Health and Safety of the driver and all other road users!

Using our control box the downlights can work together with the side-markers. They can flash with the direction indicators, and automatically come on and off according to the speed of the vehicle.

To maintain a continual footprint of light we advise the application of one downlight every 1,50 metres maximum, or less. (Height fitted from the ground determines appropriate spacing).
