

ADAS TRUCKS Calibration

auto.com

Ideal for glass and repair workshops. By professionals - for professionals.
The mobile product solution for calibration of assistance systems on trucks, buses and vans.

What is ADAS and calibration?

ADAS stands for Advanced Driver Assistance Systems. It is technical assistance systems, such as automatic emergency braking, lane departure warnings, adaptive cruise control etc.

To be able to perform a full service or even just replace a windscreen, the workshop need to calibrate the affected ADAS systems. Calibration must be done in a correct and safe way. Some workshops cannot do this by themselves so they get help from other companies. That means both losing time and money.

Get more customers and higher sales

Autocom offer a mobile product, designed specifically for the calibration of the assistance systems on trucks, buses and vans. With this, you do not need to send off vehicles to other companies in order to fulfil the service. You can earn more money and attract more customers.

In accordance to vehicle manufacturer specifications

Autocom ADAS solution for trucks, buses and vans are developed in accordance to the vehicles manufacturers own specifications. This means that the calibrations are safe and secure. It gets the job done the right way.

Some examples when ADAS calibration is necessary

- The windscreen has been removed and installed or replaced.
- The wheel setting on the front or rear axle is adjusted.
- Adjustment of the driving hight.
- The camera in front of the driver assistance system has been removed, installed or replaced.

Your advantages

- Secure solution.
- Mobile and flexible.
- Easy-to-use.
- Wide brand coverage.
- Increased workshop competence.
- Generate additional sales.
- Stronger customer loyalty.

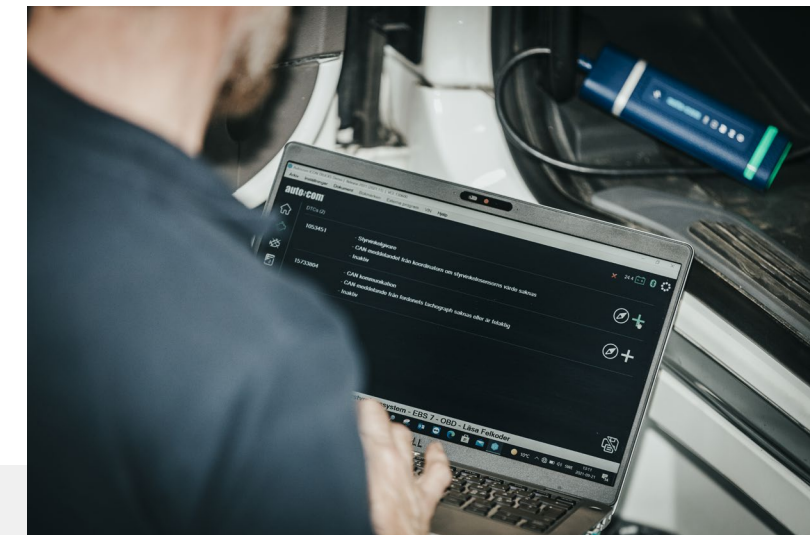

What is included?

The ADAS TRUCKS calibration kit includes all necessary parts packed in a sturdy case. Targets for MAN, Scania, Volvo and Renault are also included. The equipment is easy to transport and has short set-up-time. This allows all work to be carried out on the spot practically anywhere. Diagnostic adapter cables are available as accessories.

Diagnostic tool and software

To perform a complete ADAS calibration the diagnostic hardware ICON or TITAN is required. The software for TRUCKS is also needed. The help files in the software will guide you through a secure calibration on the vehicle.

You get a safe and easy-to-use solution.

Mobile adjusting rig with targets (reference panels)

The laser-based Autocom mobile adjusting rig is a tool for the positioning of optical reference panels. It works for the most common truck and bus brands and models and is developed in accordance with manufacturer specifications.

The adjusting rig is easy to transport and has a short set-up time. That makes it ready for use on the spot in practically no time.
