QUALITY AND SERVICE

European approval

All towbars and Specific Carrier Units (SCU) we manufacture are approved in accordance with current European regulations.

ISO 9001 Certificate: 2015

Our towbars are manufactured under the ISO 9001 quality assurance system: 2015 (original approval 1998).

“Made in Spain”

From our plant in Saragossa (Spain), and proud to carry ‘Made in Spain’ in our veins, we export to 60 countries on all five continents.

Customer care

A team of 18 professionals provides daily customer service and advice by phone and email, processing orders quickly and efficiently.

5-year warranty

All towbars and Specific Carrier Units (SCU) manufactured by Enganches Aragón have an extended five-year warranty.

RSA Recognition

In 2016, Aragón Regional Government awarded us the socially responsible company seal. We work to achieve a more sustainable society, always striving to look after our workers.

New online

The website www.enganchesaragon.com is the best place to keep up to date with all our product news, order online, and see the brand's latest videos and images.

Instructions with picture symbols

All towbars are supplied with pictograms to assist installers when mounting the towbar on the vehicle.

MANUFACTURE

Enganches Aragón designs and manufactures towbars that fit the vehicle perfectly. We market our towbars with a five-year warranty and European official approval.

Innovation, ease of use and safety make us a leading European brand in designing, producing and selling car towbars.

Our warehouse stocks around 1800 different models of towbars and wiring kits for sale. Every year, we develop more than a hundred new models of towbars and vertical loading devices for zero-emissions vehicles. Two million cars around the world are currently equipped with towbars manufactured at our plant in Saragossa.

Each vehicle requires its own towbar. We use a cutting-edge scanner arm to digitise the chassis of each model, obtaining a 3D model to develop the towbar specific for each car. The engineering team develops a specific towbar with millimetric precision. We use a finite element calculation programme to simulate the towbar's fatigue test, reinforcing the critical points before manufacturing a prototype.

Each template is subjected to a fatigue test in the laboratory, in order to check the safety and reliability of each part. Once we have passed the endurance tests, we are ready to mass-produce this towbar.

The parts for each towbar are precisely cut using two state-of-the-art laser machines and CNC press brakes. The different parts form a whole thanks to the work of two welding robots. Once welded, the towbars are subjected to peening in several phases in order to guarantee optimal paint adherence, achieving salt spray resistance of 720 hours.

TOW BALL TYPES

All Enganches Aragón's models are safe, durable and very easy to use. Enganches Aragón has the perfect towbar for every customer.

The vast majority of vehicles let you to choose from several types of towbar. Each coupling has its own unique features, but all are equal in terms of innovation, ease-of-use and safety.

A Fixed tow ball

Ideal for all types of vehicles, with this type of tow ball the towbar is always ready to use. Providing excellent value for money, it is available in various lengths and heights, and bumper trimming can be avoided in many models.

 Can be disassembled with the help of tools.

F Horizontal detachable

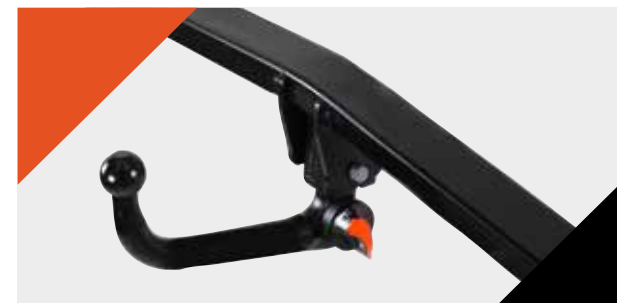

Ideal for all types of vehicles. It is perfect for anybody wishing to easily disassemble and assemble the vehicle's tow ball. It has an anti-theft and anti-rotation safety system to prevent the tow ball from swaying.

 Can be removed manually without tools.

SV Vertical detachable

The ideal coupling for anybody who wishes to keep the towbar hidden away when not in use, but easy to be assembled when needed. It has an automatic locking system for enhanced security, and optical locking control (red/green).

 Can be removed manually without tools.

C/G Plate / Pin

Plate and pin type tow balls are coupling models which, given their characteristics, are generally used in 4x4 vehicles. The pin is used for traditional and eyebolt towbars, which are very popular in agricultural activities and public works. Zinc-plated finish.

 Can be disassembled with the help of tools.

ALTERNATIVE FOR NON-TOWING VEHICLES

For those vehicles without towing capacity, we put at your disposal a complete range of weight carrying ball. The perfect solution for bike carrier or TowBox.

Enganches Aragón cooperates with a specialist engineering firm to ensure that vertical loading device passes the roadworthiness test. We take care of the whole process, obtaining official authorisation for your vertical loading device within 15 days.

ELECTRIC CARS

HYBRID CARS

GAS VEHICLES
(GNV, GLP, GNC AND GLC)

VEHICLES WITH NO MAXIMUM TM OR WITH
INSUFFICIENT MAXIMUM TM FOR TOWING.

UNIVERSAL ELECTRICAL KITS

AR513 and AR507 universal electrical kits are compatible with almost all vehicles on the market. They are short-circuit proof, and compatible with towbars and transportation solutions equipped with LEDs.

ARAGÓN TRUCK ELECTRICAL KIT

Aragón Truck is the appropriate universal wiring kit for pick-up vehicles, small body trucks and motorhomes. It is equipped with a rubber protection that makes the module weather proof (IPGG).

WIRING KITS AND ELECTRONICAL SOLUTIONS

SPECIFIC ELECTRICAL KITS

Enganches Aragón offers the widest range of specific electrical kits on the market. Our specific electrical kits are designed and manufactured to the highest quality standards in the automotive industry.

ARAGÓN TOWBAR TESTER

Tester for wiring kits. More compact design than the conventional ones, or the trailer lighting boards used to test the wiring kits. Possibility of testing battery output +30 and +15. It tests the proper functioning of C-2 Control.

TowCar®

ECONOMICAL AND QUIET

The main advantage of tow ball bike racks is that they do not affect the vehicle's aerodynamics. This translates into significant fuel savings, as well as a more comfortable and noise-free driving.

EASY LOADING AND UNLOADING

Unlike roof or tailgate racks, tow ball racks make it easy to load and unload bikes on all types of vehicles, including SUVs, MPVs and vans. You will also avoid any unwanted surprises when entering or leaving the garage and forgetting that you are carrying the bikes on the top of the car.

TOWCAR® MOTORBIKE CARRIER

The TowCar® Racing and TowCar® Balance motorbike carriers are designed to carry children's dirt bikes, trial bikes, mini-cross bikes, pit bikes, mopeds and small motorbikes up to 75 kg on the vehicle's tow ball.

TowCar® Racing

Safe and noise-free driving.

Fuel saving.

It takes up little space.

Further information at www.enganchesaragon.com

TowCar® Balance

Balancing effect to avoid making efforts.

Front wheel adapter.

Safe and noise-free driving.

TOWCAR® SKI RACK

TowCar® ski racks are mounted on the vehicle's tow ball. Both TowCar Aneto and TowBox Top Ski allow easy access to the boot, even with skis or snowboards loaded. TowCar Aneto measures just 30 centimetres when not carrying skis or boards.

TowBox® V1 + Top Ski

Luggage rack and ski rack all in one.

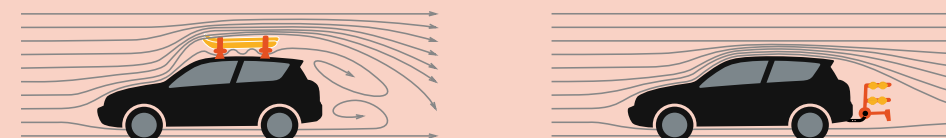

TowCar® Aneto

Skis or snowboards are placed horizontally.

BETTER AERODYNAMICS

The main advantage of tow ball ski racks is that they do not affect the vehicle's aerodynamics. This translates into significant fuel savings, as well as a more comfortable and noise-free driving.

EASY LOADING AND UNLOADING

Unlike roof ski racks, tow ball racks make it easy to load and unload skis and snowboards on all types of vehicles, including SUVs, MPVs and vans. You will also avoid any unwanted surprises when entering or leaving the garage and forgetting that you are carrying the skis on the top of the car.
