

Adam Pumps

2021 COMPANY PROFILE

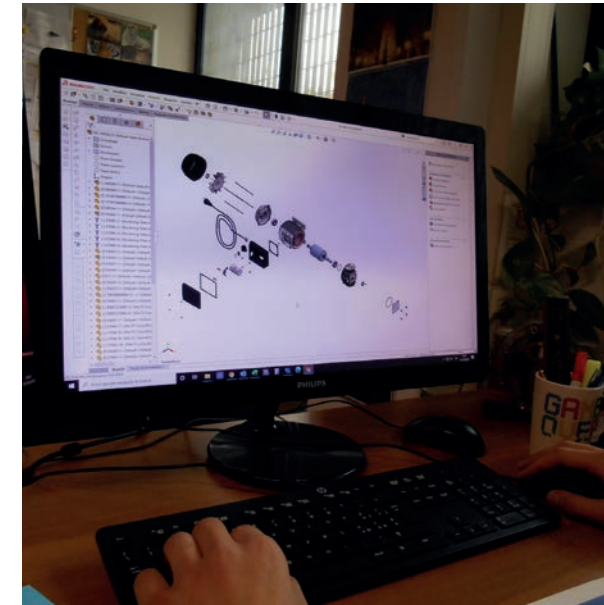

DIESEL/OIL/ADBLUE® TRANSFER SYSTEM FOR
CONSTRUCTION - AGRICULTURE - AUTOMOTIVE

With over 30 years of experience,

Adam Pumps was founded in 2010 following the management buy-out of Tuthill Italia Spa, the Italian branch of Tuthill Corporation, world leader manufacturer of pumps and meters for gasoline. Prior to Tuthill, the company had long been a specialist for the diesel transfer solutions, as Gasco first and KSK after.

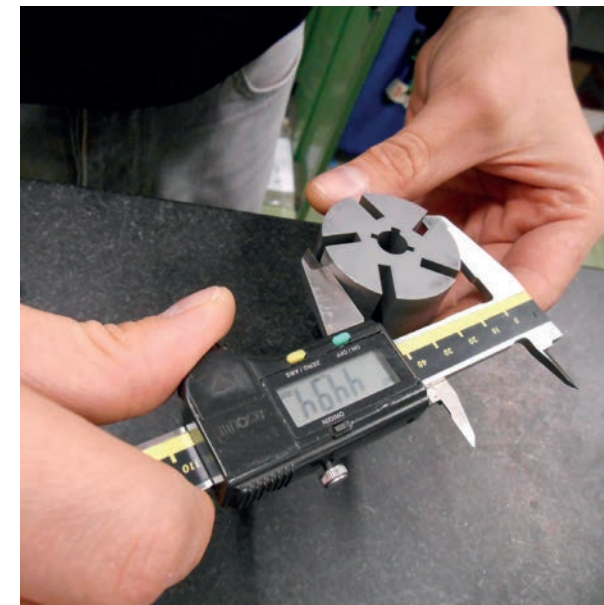

At Adam Pumps we focus on quality.

Quality of the service and complete customer's satisfaction.

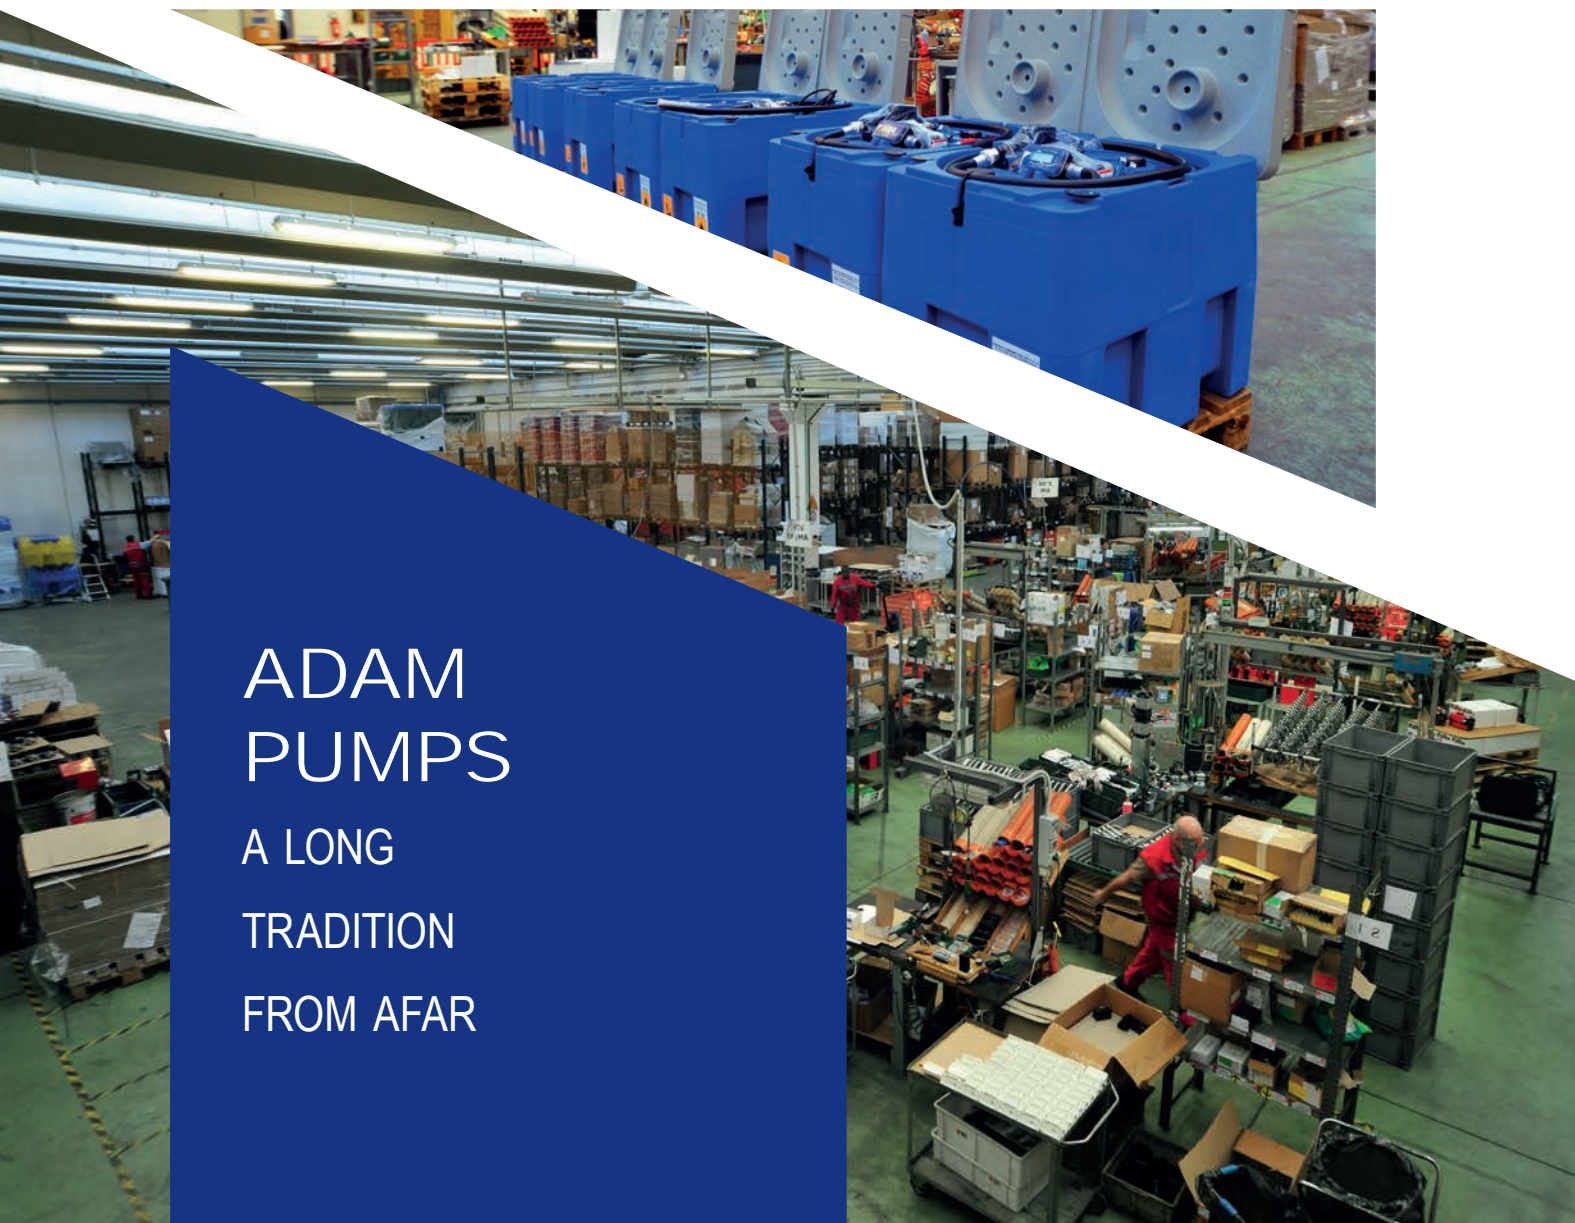

Quality of the products, all of which are conceived and designed at our technical department through the most accurate technologies (3D Cutting –edge software

for example) and individually tested according to the most stringent parameters. Manufacturing protocol guarantees efficiency and fast response.

“Continuous improvement” is the guiding philosophy of every Adam Pumps employee striving to meet the needs of their customers.

PUMPS

A LONG
TRADITION
FROM AFAR

FLOW METERS

R FLOW

Adam Pumps offers a wide range of volumetric meters.

It's possible to adjust the flow direction on all meters to meet the installation needs. The flow meters are equipped with calibration systems for accurate flow regulation.

The new range of flow meters is available for diesel, urea and food applications such as olive oil, milk and drinking water.

Our flow meters are optionally available with a pulse output for connecting them to management devices and can be equipped with a TAG reader and a management software to control small refuelling systems.

(Ad Blue®)

DISPENSERS & TANKS

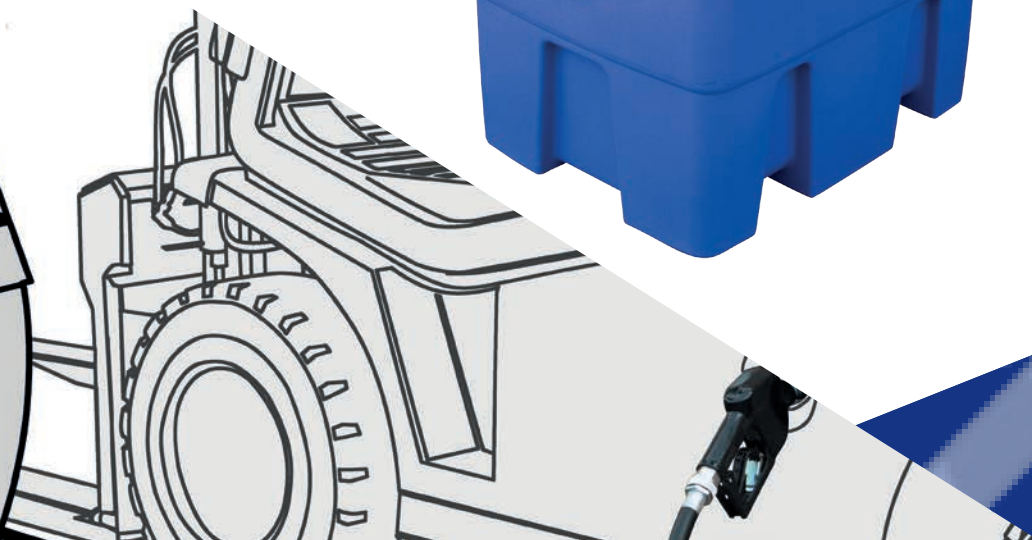

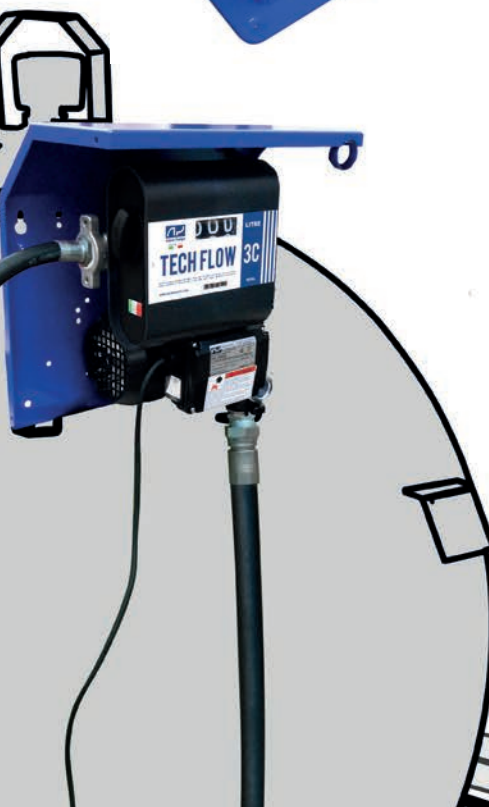

AF3000

ARMADILLO

The pumps are installed on all our dispensers and included as equipment for portable tanks with ADR exemption.

TECH TANK 220L

G-FLOW TAG

Digital flow meter designed to manage refuelling operations, allowing transfers only to authorized persons.

It's the owner of the system (MASTER) who gives the authorization and can programme up to 50 user TAG keys, setting dispensing limitations for each of them and the maximum total litres available in a given period of time. The device allows you to immediately check the amounts dispensed by each authorized user in the specified period and to download such data to your computer using the "data download kit" (optional).
