

CONDENSER ASS'Y

Air conditioning system in vehicle has transformed to a more complex technology over the years.

It involves more precision & micro dimension parts that require different kind of handling.

With the increasing climate change, air conditioning become more important than ever.

KOYORAD condenser is designed to ensure optimum refrigerant flow rate in the air conditioning system.

Too fast or too slow flow may lead to insufficient performance and you will only get warm air in the cabin.

Besides this might also lead to damaging the compressor at the end if the handling of such problem is too late.

At KOYORAD facility, our aim is to develop product with OE equivalent specification.

SMART CHOICE

Make the smart choice with KOYORAD products!

Initial cost of other low-quality condenser maybe lower but the risk of low reliability is high.

Use of low-quality condenser may lead to other component failure in the cooling system. i.e., compressor. Cost of repair to this component outweigh the initial cost of low-quality condenser by many times.

Cost of repair and down time easily exceed the initial cost of using KOYORAD condenser.
